THE BASQUE DIALECT OF LEKEITIO

This book is a study of the Basque variety spoken in Lekeitio. As such we have intended to make a direct contribution to Basque Dialectology, aiming at setting certain standards for research in this area. In addition, we believe that some of the materials assembled in this work will be of interest to a larger audience, beyond Basque specialists. It is for this reason that we decided to write the present book in English. In our opinion, certain linguistic aspects are treated in more detail here than in any previous work on any other Basque variety. A case in point would be accentuation, both at the lexical level and in its relation to the syntactic process of focalization.

In a number of cases, it is difficult to know to what extent the facts that are described here represent unusual local developments or have a wider geographical distribution but have not received the attention of linguists. An example is the integration of gender (a category borrowed from Spanish) in the linguistic system of Basque (e.g.: mutill altúa 'tall boy' but neska altía 'tall girl') which has resulted in developments beyond the possibilities of the source language such as the extension of the distinction to verbal forms (e.g.: morenotu 'to get tanned (a male)' vs. morenatu 'to get tanned (a female)'). Other dialectal phenomena occurring in Lekeitio and which have not been previously reported to our knowledge are, for instance, the use of the reciprocal anaphor alkarr with intransitive agreement and the existence of important differences among "semiauxiliaries" such as nai 'to want' and biar 'must'.

After an introductory chapter in which the sociolinguistic reality of Lekeitio and the main differential characteristics of the Basque variety spoken in this town are considered, this book contains chapters on Phonology, Morphology and Syntax. The data in these three chapters represent the native intuitions of two of the authors and have also been checked against those of other speakers. In the Phonology and Morphology chapters, we have aimed at being exhaustive in the presentation of phenomena. The Syntax chapter has a narrower scope, constituting for the most part a classification of the main monoclausal and multCLAUSAL sentence types found in Lekeitio.

These four chapters are followed by a set of transcribed texts excerpted from recorded conversations with Lekeitio speakers spanning a wide age range. The recordings were made by one of the authors who is also a member of the linguistic community and represent a relaxed conversational style; the interviewees being for the most part friends and relatives of the interviewer. These texts thus offer a representative sample of Lekeitio speech.

Finally, an extensive vocabulary list has been included. Our goal has been to gather the lexicon that is currently in use in Lekeitio, without discriminating against any words by reason of their foreign origin. Including both old and new loanwords allows one to observe how

Spanish borrowings are nativized and to determine to what extent phonological rules are active in their application to borrowed items.

A tape containing the texts corresponding to the transcriptions of chapter 5 as well as oral renditions of many of the examples from other chapters is available from the authors.

TABLE OF CONTENTS

Preface 1	XV
Preface 2	XVII
Preface 3	XXI
Abbreviations	XXIII
 1. <i>Introduction</i>	1
1.1. Lekeitio sociolinguistics. Lekeitio Basque, Standard Basque and Spanish	1
1.2. Lekeitio Basque among the Basque dialects	6
 2. <i>Phonology</i>	11
2.1. Sound inventory	11
2.2. Description of phonemes and principal allophones	12
2.2.1. Stops	12
2.2.2. Affricates	14
2.2.3. Fricatives	14
2.2.4. Nasals	17
2.2.5. Laterals	18
2.2.6. Rhotics.....	19
2.2.7. Vowels and glides	20
2.3. Syllable structure	21
2.3.1. Onsets	21
2.3.2. Nuclei	21
2.3.3. Codas	23
2.3.3.1. Word-internal codas	23
2.3.3.2. Word-final codas.....	23
2.4. Word-initial restrictions.....	24
2.5. Main phonological processes affecting consonants.....	24
2.5.1. Nasal and lateral assimilation	24
2.5.2. Palatalization of noncontinuant consonants	25
2.5.3. Interaction between palatalization and nasal and lateral assimilation...	28
2.5.4. Palatalization of /s/	29
2.5.5. Neutralization of rhotics	31
2.5.6. Deletion and reduction of preconsonantal stops.....	31
2.5.7. Devoicing of stops	32
2.5.8. Fricativization of preconsonantal affricates	33
2.5.9. Degemination	33
2.5.10. Spirantization and related processes.....	33
2.5.11. Allophony of the voiced prepalatal obstruent	36
2.5.12. Voicing of fricatives	37

2.6.	Main phonological processes affecting vowels	37
2.6.1.	Mid vowel raising	37
2.6.2.	Ž-insertion	39
2.6.3.	Total assimilation of vowels	41
2.6.4.	Postvocalic glide formation	43
2.6.5.	Deletion and gliding of postvocalic mid vowels	44
2.7.	Restricted morphophonological processes	45
2.7.1.	Raising and deletion of stem-final low vowels	45
2.7.2.	Processes affecting the negative particle	46
2.7.3.	Voicing of stops after noncontinuant sonorants	46
2.7.4.	Deletion processes in verbal groups	48
2.7.5.	Final glide deletion in perfective participles	48
2.7.6.	Total regressive assimilation	48
2.7.7.	Dependent stem formation rules	49
2.8.	Accentuation	50
2.8.1.	Accented and unaccented morphemes	52
2.8.2.	Compound accent rule	55
2.8.3.	Deaccentuation	56
2.8.4.	Prosodic and morphological words	56
2.8.5.	Enclitic accent	59
2.8.6.	Focal accent	61
2.8.7.	Focalization with synthetic verbs	64
2.8.8.	Imperative and addressive accent	65
2.8.9.	Question accent	65
2.8.10.	Accent clash resolution	66
2.9.	Major intonational patterns	68
2.9.1.	Declarative sentences	68
2.9.2.	Yes-no questions	70
2.9.3.	Question-word questions	74
2.9.4.	Confirmation questions	78
2.10.	Adaptation of borrowings	81
3.	<i>Morphology</i>	85
3.1.	Nominal inflection. Structure of the noun phrase	85
3.1.1.	Nonlocative cases	87
3.1.2.	Locative cases	92
3.1.3.	Animate allative and other animate locative cases	96
3.1.4.	Special cases: Stem-final diphthongs	96
3.1.5.	Demonstratives	97
3.1.6.	Personal pronouns	103
3.1.7.	Interrogative pronouns	104
3.1.8.	Quantifiers	105
3.1.9.	Postnominal postpositions	107
3.1.10.	Gender	108
3.2.	Verbal inflection	110
3.2.1.	Nonfinite forms	110
3.2.1.1.	Perfective participle	110
3.2.1.2.	Imperfective and future participles	113

3.2.1.3. Verbal noun	114
3.2.1.4. Perfective participles as adjectives	115
3.2.1.5. Predicative participial adjectives	115
3.2.1.6. Relative participial forms	116
3.2.1.7. Other nonfinite forms	116
3.2.2. Finite forms.....	117
3.2.2.1. Intransitive auxiliary	117
3.2.2.2. Synthetic intransitive verbs	121
3.2.2.3. Transitive auxiliary	123
3.2.2.4. Synthetic transitive verbs	132
3.2.2.5. Allocutive conjugation.....	134
3.2.3. Tense, aspect and mood: Basic forms	135
3.2.3.1. Present indicative.....	137
3.2.3.2. Present perfect / Recent past	137
3.2.3.3. Aorist	138
3.2.3.4. Imperfect	138
3.2.3.5. Future	139
3.2.3.6. Future of the past	139
3.2.3.7. Present conditional.....	139
3.2.3.8. Past (failed) or hypothetical conditional	140
3.2.3.9. Present potential	140
3.2.3.10. Past potential	140
3.2.3.11. Subjunctive and alternative expressions.....	141
3.2.3.12. Imperative.....	144
3.2.4. Periphrastic constructions	144
3.2.4.1. Progressive construction with <i>egon</i>	144
3.2.4.2. Repetitive construction with <i>ibilli</i>	144
3.2.4.3. Habitual construction with <i>žakiñ</i>	145
3.2.4.4. Resultative/experiential with <i>euki</i>	145
3.2.4.5. Resultative/experiential with <i>egon</i>	146
3.2.4.6. Future with <i>žuan</i>	146
3.2.4.7. Immediate future with <i>egon</i>	147
3.2.4.8. Optative construction with <i>euki</i>	147
3.2.5. Semiauxiliaries	147
3.2.6. Modal prefixes	151
3.3. Derivation	152
3.3.1. Noun-forming suffixes.....	152
3.3.2. Adjective-forming suffixes.....	155
3.3.3. Verb-forming suffixes	157
3.3.4. Adverb-forming suffixes	159
3.3.5. Prefixation.....	161
3.4. Compounding	162
3.4.1. Compound nouns	162
3.4.2. Compound verbs.....	164
4. <i>Syntax</i>	167
4.1. Order of constituents: The syntax of focalization	167
4.2. Negative sentences	170

4.3.	Interrogative sentences.....	171
4.4.	Sentence types.....	172
4.4.1.	Copulative sentences.....	172
4.4.2.	Secondary predication.....	172
4.4.3.	Intransitive and transitive sentences: Auxiliary selection	173
4.4.4.	Causatives.....	175
4.4.5.	Reciprocals	176
4.4.6.	Reflexives	179
4.5.	Subordination	182
4.5.1.	Noun clauses	182
4.5.1.1.	Subject noun clauses.....	182
4.5.1.2.	Indirect statements.....	183
4.5.1.3.	Indirect questions.....	185
4.5.1.4.	Indirect commands.....	187
4.5.1.5.	Complements of aspectual verbs and verbs of perception ...	188
4.5.1.6.	Indirect object clauses	189
4.5.1.7.	Complement of a noun	189
4.5.2.	Relative clauses.....	190
4.5.3.	Cleft sentences.....	193
4.5.4.	Adverb clauses.....	193
4.5.4.1.	Time clauses.....	193
4.5.4.2.	Manner clauses	198
4.5.4.3.	Purpose (final) clauses.....	199
4.5.4.4.	Cause clauses	200
4.5.4.5.	Consequence/result clauses	202
4.5.4.6.	Degree/comparative clauses	203
4.5.4.7.	Concessive clauses.....	205
4.5.4.8.	Clauses of proviso	206
4.5.4.9.	Conditional clauses	207
4.5.4.10.	Other types of adverbial adjunct clauses	208
4.5.5.	Exclamative sentences.....	209
4.6.	Coordination.....	210
4.6.1.	<i>And</i> -, <i>or</i> -, and <i>but</i> -coordination	210
4.6.2.	Correlative coordination	211
4.6.3.	Result coordinate clauses	213
4.6.4.	Explicative clauses	213

PREFACE 1

Perhaps it will be of some interest to the reader to know why this book was written and how it came about. Writing a book of this type is something that I have had in mind for a number of years already. In 1986, when I started working on my dissertation on the Lexical Phonology of Basque, it soon became apparent to me that basic descriptive work on individual Basque varieties was sorely needed if one were to advance in the study of the Phonology of the language. Given the scarcity of published data that could be used to support explicit phonological analyses, my thesis, which was revised and published in 1991 as *Basque Phonology*, was based to a great extent on my own fieldwork with speakers of different varieties. This work left me with the strong impression that there was still much to be discovered by studying local varieties in detail. I thus decided to embark in this kind of dialectal research as soon as the opportunity presented itself. A first step in this direction was my joint work with Xabier Bilbao, which resulted in the publication of *A phonological study of the Basque dialect of Getxo* in 1992. For a number of reasons this study could not be as extensive as I initially wanted it to be. I considered it a pilot study for more ambitious work to be undertaken in the future.

Shortly after the Getxo manuscript had been sent to the press, in November of 1991, I had the good luck to see Gorka Elordieta (whom I had met years before), at a Conference in Los Angeles, where he was pursuing a graduate degree in Linguistics. I approached Gorka about the possibility of collaborating in a study of his native dialect of Lekeitio and he was enthusiastic about it. We agreed that he would fly to my home in Champaign for a few days during the following spring. In the meantime I would make a general plan for the work. During Gorka's visit in the spring of 1992 we collected most of the data for the Phonology chapter and did some basic work on Syntax. We decided that during his summer stay in Lekeitio, Gorka would complete inflectional paradigms and obtain lists of examples of morphological derivation and compounding in consultation with other speakers. He would also make recordings of free conversations with speakers of different age groups. We also thought that we would try to convince his sister Arantzazu, who was enrolled as a doctoral student in Basque Philology at the University of the Basque Country, to collaborate with us. She graciously agreed and was assigned the very important and extremely time-consuming job of compiling the vocabulary list. In addition, she would serve as our local contact for checking the data when we wanted the opinion

of a diverse group of speakers or wanted to obtain forms used only by specific populations such as older speakers or fishermen.

After the summer, it was my turn to work. With all the data assembled, I started writing the text. As anyone who has done this kind of work knows, no matter how complete a questionnaire one has, as soon as one tries to make sense of the data that have been obtained and derive generalizations from them, all sorts of questions arise and many more data have to be gathered. Thanks to the wonders of electronic mail, all my questions were promptly answered by Gorka with whom I have been in constant electronic (and frequent telephonic) contact. Gorka's summer and winter stays in Lekeitio (and his phone calls to his family) have been used as opportunities for confirming data. To Gorka are also due many important observations and generalizations about all sorts of linguistic points.

In addition to compiling the vocabulary list, transcribing some of the recorded texts and other tasks, Arantzazu, as our permanent research team member in Lekeitio, was in charge of conducting the survey about language use in the local schools and obtaining the rest of the sociolinguistic information reported in Chapter 1. I hardly could have hoped to find such excellent collaborators.

I am very grateful to Koldo Zuazo and Miren Lourdes Oñederra, who read the manuscript of the book, providing many insightful and valuable comments.

I also want to thank Joseba A. Lakarra for his help with the technical aspects of publishing this book.

PREFACE 2

This book is dedicated to the memory of Resurrección María de Azkue, a native of Lekeitio, and founder and first President of the Academy of the Basque Language. Azkue's impressive scholarly work on Basque grammar and dialectology is widely recognized in the field of Basque linguistics and philology. It can be said without any doubt that his legacy transcends time and linguistic theories and traditions, as reflected by the fact that his two monumental works (*Diccionario vasco-español-francés*, 1905-1906, and *Morfología Vasca*, 1923), as well as many of his articles, still constitute a basic source of information for any person engaged in doing research on any aspect of the Basque language. Despite this public acknowledgment, however, it is also true that some of Azkue's views endured severe criticism from other prominent Basque scholars, such as Seber Altube and Luis Michelena [Koldo Mitxelena], especially the former. The issue which stirred most controversy was probably Azkue's attempt to describe the Basque accentual pattern ("Del acento tónico vasco en algunos de sus dialectos", 1931-1932). The dispute arose from the fact that Azkue claimed to have achieved a description of the general accentual pattern of Basque, when the truth is that the system reflected in his study is exactly the one found in the Biscayan dialect of Lekeitio and Ondarroa, but nowhere else. In this dialect, one can distinguish between unaccented and accented words, depending on whether they have their final or penultimate syllable stressed, respectively. The accented pattern is triggered by a lexical property of certain morphemes (including both roots and affixes). Although in neighboring Biscayan varieties such as the Gernika type we find a distinction between unaccented and accented words, accentual prominence does not necessarily have to fall in one of the two final syllables (cf. Hualde 1989, 1990, 1991, 1993a). Once we move to other non-Biscayan dialects, we find even greater differences. Altube did not recognize most of the generalizations and observations made by Azkue, confused by the misleading approach adopted by the Lekeitian priest, and neither did Michelena (cf. Altube 1934, Michelena 1958). On behalf of Azkue, we should say that such an approach was probably dictated by what he felt was a compelling need to establish a literary, standard variety of Basque which could provide a unifying identity to a language with considerable differences among its dialects. Indeed, in the above mentioned article, Azkue used examples from eastern varieties (from Souletin, concretely) which coincidentally also showed final and penultimate stress, depending on certain morphological differences, as well as phonological. But again, the metrical properties of these dialects are certainly not identi-

cal to those of Lekeitio, once studied in detail (cf. Hualde 1990, 1991, 1993b; Michelena 1958, 1985). It is very conceivable that Azkue included these data deluded by his own desire for convergence in the Basque language.

In his final sentence in the summary section of the second part of his article, Azkue's words speak for themselves (p. 50): "Al dar por terminado el Estudio de nuestro acento tónico, deploaré una vez más que sea este tan distinto en algunos de sus dialectos." ["Hereby finishing the study of our accentual system, I shall deplore once again that it is so different in some of its dialects."].

Nevertheless, it would not be fair to charge on Azkue all the confusion on Basque accentuation that may have resulted after the publication of his famous article. In fact, Altube himself contributed to this state of affairs, since in his *Observaciones al Tratado de 'Morfología Vasca' de Don R.M. de Azkue* (1934) he made the same mistake Azkue made. He described what he believed to be the "real" Basque accentual system based mainly on the central Gipuzkoan variety, and claimed that that system also applied to Biscayan varieties (and even eastern dialects, with some minor modifications). In the dialect Altube discusses the main stress in the word falls on either one of the first two syllables of the word, depending on the number of syllables of the word or the prosodic unit in which the word is included, without accentual properties triggered by morphemes. Clearly, this system does not coincide with central Biscayan varieties, where the domain for stress assignment is not circumscribed to the first two syllables, and is determined by accentual properties of morphemes composing words. Thus, it is obvious that Altube's ambitious position does not hold.

Although we know that Altube must not have been unfamiliar with Biscayan dialects (he was the mayor of Gernika, a Biscayan town located 17 miles south of Lekeitio), it is not gratuitous that he chose the central variety of the Gipuzkoan dialect as the basic model for Basque accentuation. At that time, the Gipuzkoan variety was considered by many Basque linguists and humanists in general as the most prestigious among all dialects, and it seems that Altube tried to focus only on the accentual properties of this dialect, ignoring the rest.

Puting aside the criticizable aspect of Azkue's work on Basque accentuation, it is fair to acknowledge the accuracy of Azkue's description of the accentual system of the dialect of Lekeitio. His work goes beyond descriptive adequacy, in the sense that it also gives the first insight into the underlying mechanism ruling stress assignment in this dialect. For example, on page 290 of the article mentioned above, Azkue says: "... todos los elementos de suyo átonos ceden su atonía al elemento que se les agrega, quedando ellos en el tono de las sílabas precedentes." [... all elements which are inherently atonic pass their atonicity onto the element that is suffixed to them, and remain in the same tone as the previous syllables."]. By "atonic elements" he referred to the morphemes that trigger penultimate stress when suffixed to a root, and remain in a lower tone than the preceding syllables. An example of these would be the diminutive morpheme *-txu*: cf. *nes.ká* 'girl' vs. *nes.ká.txu* 'little girl'. When other morphemes are suffixed to these atonic elements, the accent falls on the penultimate syllable of the new word, atonicity being realized on the new final

syllable. Thus, since the original atonic element is not in the final syllable anymore, it is not pronounced in a low tone, but in the same tone as the previous syllables (i.e., high tone, except the first syllable). This is illustrated by the word *nes.ka.txú.a* ‘the little girl’. More than sixty years later, we are corroborating Azkue’s observations, making only a more fashionable analysis with the new tools that modern linguistic theories provide for us (cf. Hualde’s work mentioned above).

Koldo Mitxelena, himself a native speaker of the Gipuzkoan dialect of Erreteria, disputed some of Azkue’s observations, such as the minimal pair formed by the first word of the following phrases: *gixonik estago* ‘there are no men’ (partitive) and *gixónik onéna* ‘the best man’ (lit., ‘the best of men’). Although the morpheme added to the root *gixon* has the same form (i.e., *-ik*) and belongs to the same grammatical category (it reflects partitive case) in both cases, the partitive of superlative comparisons is a morpheme which triggers penultimate accent (the superlative morpheme *-en* also triggers penultimate accent, as illustrated by *onéna*). Michelena (1985) writes, on page 577: “Es ilusorio tratar de distinguir con Azkue, ... el suf. *-(r)ik* ‘tónico’ de *gizonik eztago* ... del ‘átono’ de *gizónik onéna*” [“it is illusory to try to distinguish, as Azkue does, the ‘tonic’ suffix *-(r)ik* of *gizonik eztago* from the ‘atomic’ one of *gizónik onéna*”]. As a native speaker of the Lekeitio dialect, I can certify that Azkue’s distinction is as real as the undisputable fact that Mitxelena was one of the greatest Basque philologists and linguists in this century. His misjudgment in this case can only be attributed to his unawareness of the details of the accentual system of Lekeitio, and to the absence of such a contrast in his native dialect of Erreteria or other dialects that he might have mastered. Acknowledging this, we wanted to give Azkue the credit of achieving such a fine description of his native dialect, and therefore we take advantage of the opportunity to pay our humble homage to the brilliant grammarian from Lekeitio.

Finally, it is only fair to recognize the fact that this book would not have been possible if the dialect of Lekeitio did not exist. And in turn, we also have to bear in mind that if the dialect of Lekeitio exists, it is because of its people. At a time in which Standard Basque constitutes the official language in the Basque Autonomous Community, along with Spanish, vernacular varieties are not taught at schools, all instruction on the Basque language being on the Standard dialect. Local dialects are maintained as everyday means of communication among native speakers in towns and villages. This is the case in Lekeitio too. The Lekeitian people are the only ones who, consciously or unconsciously, can keep the vernacular variety alive (as long as the town keeps its natural demographic growth and way of life), and they are the only ones who, consciously or unconsciously, can cause its death. It is often said that languages are a heritage of humanity, but while politicians and intellectuals revel in the beauty of the truism, it is the people speaking those languages that keep them alive. Knowing the spirit of Lekeitians, I have no doubt that they will take care of their heritage. This is why we also dedicate this book with great honor to the People of Lekeitio, for all their knowledge that we have simply reflected in written form.

At a personal level, I want to thank María Nieves Alzíbar, Andoni Barainka, Ainara Barainka, Sorkunde Burgoa, Eukene Elordieta and Pablo Gabiola for

allowing me to record my conversations with them, and the rest of my family, for being such great informants and for checking my native intuitions. Rufo Atxurra deserves my most sincere gratitude and utter respect, for his attention, his interest, and his historic knowledge of the evolution of the Lekeitio dialect over the last 100 years. Alfredo Arnaiz ("Komandante Arnaiz") printed the figures illustrating the F0 contours of the sentences in the section on intonation, in chapter 2. I also want to thank the Department of Education, Universities and Research of the Basque Government for financial support during most of the time it took to prepare this book.

PREFACE 3

As someone involved in the writing of this book, I would like to insist on the reasons that have led us to write a descriptive grammar of a Basque dialect which is relatively distant from the standard variety.

One might think especially taking into account the difficult sociolinguistic position of Basque speakers, all of whom live in a situation of bilingualism, that a dialectal description of this sort does not have any practical utility, both because of the small number of speakers of such a variety and because it is not a written language. Nevertheless, we have wanted to produce a dialectal study because we believe that only if we start from a detailed description of local varieties can we hope to obtain a better knowledge of the Basque language as a whole, which eventually should also have an impact on the grammatical formulation of the standard language.

To give an example, the Basque variety of Lekeitio, which we describe in this work, presents some very intricate facts involving the prosodic consequences of such syntactic phenomena as focalization, the verb-auxiliary relation, the distinction between simple and periphrastic verbal forms, etc. Many of these facts have not been previously described for any other Basque variety and we believe that they should be of interest both to Basque specialists and also to other linguists working on such theoretical areas as the relation between syntactic and phonological processes.

If we were to disregard the study of local dialects, we would lose an important linguistic wealth. This loss would not only be for the field of Linguistics, but also for other aspects of human culture; since the language of a human group is the bearer of its traditions, customs, beliefs, etc. Anyone who has been concerned with the standardization of a language will understand what I am saying.

In addition, the study of Universal Grammar and linguistic universals requires the consideration of the dialectal diversity which might be present in any language.

In the distribution of tasks for writing this book, my contribution has been, in an important measure, the compilation of a dictionary of words used in Lekeitio. I would have been unable to carry out this tough work without the constant and unconditional help of Rufo Atxurra, a wonderful elderly informant who was always willing to answer my questions and provide me with all kinds of information. This information has been extremely useful in my work. Likewise, I would like to give my thanks to the members of the gastronomical society Kai-Abiya of Lekeitio, a group of amicable sailors to whom I am indebted for answering all my questions, regarding, especially, the Basque names of different kinds of fish. And, of course, I

also want to thank my family, with whom I have checked and clarified my native intuitions over and over, and also for their collaboration in the recordings that were made.

As a Lekeitian, I am proud to have taken part in the elaboration of this book, which we present as an homage to the people of Lekeitio, albeit more modest than that of Azkue.

ABBREVIATIONS

In word-by-word glosses, the following abbreviations are used:

Nominals:

A=	absolutive	E=	ergative
AL=	allative	G=	genitive
AB=	ablative	GL=	genitive locative
C=	comitative	IN=	inesive
D=	dative	PT=	partitive.

Singular and plural numbers are indicated in the translations themselves in nouns (e.g. 'book', 'books'). In adjectives and other forms: s = singular, p = plural. Indefinite number is marked as ID.

Verbal forms:

AUX=	auxiliary	F=	future participle
I=	imperfective participle	VN=	verbal noun.
RELP=	relative participle		

Perfective participles are unmarked (e.g. the perfective participle *ikusi* is glossed as 'see'; the imperfective form *ikústen* is glossed as 'see.I')

Other abbreviations

CP=	complementizer	M=	modal prefix
DIM=	diminutive	QP=	question particle
EMPH=	emphatic word		

1. INTRODUCTION

1.1. Lekeitio sociolinguistics.

Lekeitio Basque, Standard Basque and Spanish

Lekeitio is a coastal town of 7,579 inhabitants in the province of Biscay (Bizkaia), situated 58 kilometers to the east of Bilbao, in a solidly Basque-speaking area. Lekeitio is a bilingual town, most speakers having an active command of both Basque and Spanish. According to the official statistical data that we have consulted, 84.7% of the people living in Lekeitio speak the Basque language.¹ On the other hand, all inhabitants speak Spanish, although some elderly people may not use it with any frequency in their daily lives. A phonological trait in the Spanish pronunciation of some old Lekeitians is the absence of the voiceless interdental fricative /θ/, which is replaced by an apical /s/.

It can be said that, in general, Lekeitians show a strong feeling of loyalty towards the Basque language. An indication of this is the marked preference that parents show for education in the Basque language for their children. In the schools of the Basque Autonomous Community, there are three official language tracks or models, known as Models A, B, and D:²

Model A: All education in Spanish, except for a mandatory Basque language course.

Model B: Bilingual education. Some courses are taught in Spanish, and some others in Basque.

Model D: All education in Basque, except for Spanish language arts.

In Lekeitio there are three schools: a private Basque-language school, or *ikastola*, where all instruction is given in Basque, a public school, and a technical school. The enrollment figures in the different schools and tracks are as follows:

Ikastola: 437 students, all in Model D.

Public school: 457 students: 421 in Model D and 36 in Model B.

Technical school: 117 students: 92 in Model D and 25 in Model A.

As can be seen from these figures, Lekeitio parents are overwhelmingly in favor of education in Basque for their children.

In Lekeitio the percentage of people able to speak the Basque language remains relatively constant across age groups:

(1) The figures and percentages in this section are the results of a statistical survey conducted by SIADECO in 1988. The report has been obtained from the Lekeitio municipal government, which we want to thank.

(2) The curious gap is due to the fact that the Basque alphabet does not use the letter C.

Age group	% of Basque-speakers
2-17	82.8
18-24	86.3
25-34	82.7
35-44	83.1
45-65	86.4
66-	87.6
TOTAL	84.7

These are data from 1986. With high enrollment in Basque-language curricula, it is to be expected that knowledge of Basque among the youngest speakers, if anything, will increase, but will certainly not diminish.

Traditionally, the Basque language has played a dominant role both within the family and in the social life of the town. The economic activity of Lekeitio has been centered until recently, and continues to be centered to a certain extent, around fishing, in a work-environment which strongly favors the use of Basque. In recent years, however, tourism has become a major factor in the economic and social life of the town, increasing the presence of the Spanish language in Lekeitio considerably, especially in the summer and on weekends. A study on the use of Basque conducted by SIADECO, in which the language that passers-by in the main street of the town were speaking was noted, gave the following results for weekdays:

	Number	Speaking in Basque	%
Children (-14)	1603	1283	80.0
Youths (14-24)	875	454	51.9
Adults (25-64)	3510	2105	60.0
Elderly	1335	1026	76.8
TOTAL	7323	4868	66.5

It may be noted that the highest indices of use of Basque are found among the oldest and youngest speakers. The use of the Basque language is lowest, on the other hand, among adolescents and young adults. Looking at those results, it can be concluded that Basque is the preferred language for interaction among Lekeitians; although this preference is more marked in some age-groups than in others.

In public functions, Basque is also the preferred medium. Town Hall meetings are usually conducted in Basque, unless someone who does not speak the language is present. The mayor speaks in Basque when he addresses the community. Church functions are also in Basque, although on weekends, some masses are given in Spanish, for the benefit of tourists.

For the purposes of this study, it is of importance to distinguish the use of the local Basque variety from the use of other Basque varieties, especially Euskara Batua or Standard Basque. In principle, one might expect Standard Basque to be favored in certain public functions that would normally call for a high register, and also, perhaps, by school children, since all Basque-medium education is in the standard language, not in the local dialect. It must be noted, however, that the standard

language was not developed and codified until the 1970's and that all speakers above a certain age were educated in Spanish. Most adults, therefore, are not at all fluent in Standard Basque, even though they may have acquired some familiarity with it through reading, television and radio.

Attitudes towards the standard also vary among speakers. The fact is that Standard Basque does not play an important role in social communication in Lekeitio. The mayor and other town authorities use the local variety to address the public. In church functions, the priests modify the vernacular in the direction of an older prestige variety, Literary Biscayan, rather than Standard Basque.

In the classroom, teachers use Standard Basque exclusively and students are also expected to use this variety. To determine whether school-age children showed a tendency to use Standard Basque also outside of the classroom, which might have a decisive effect on the future of the local variety, we decided to conduct a survey in the schools. The result is that Standard Basque shows no signs of displacing Lekeitio Basque in its traditional functions. Students overwhelmingly prefer the local variety over Standard Basque for communication outside of the classroom, both with their elders and with their peers. Standard Basque has expanded the use of the Basque language to the classroom, a domain previously reserved for Spanish; but it shows no signs of supplanting the dialect, at least for the time being.

We distributed a questionnaire in all three schools. All students were in Model D except for 7 students at the technical school. The students at the ikastola and public school were in the 13-14 year age group and those at the technical school were one year older (14-15 year age group). The questionnaire was written in Standard Basque. We obtained 88 completed questionnaires: 34 from the Ikastola or Basque school, 33 from the public school, and 21 from the technical school. We included questions about their preferred language at home, with their friends on the street, and with their friends at school. The following tables display the results that we obtained in raw numbers, with percentages added for the totals:³

1. Generally, what language do you speak with your brothers and sisters?⁴

	Lek.B.	St.B.	Span.	Other B.	Total
Ikastola	30	1	2	0	33
Public sch.	22	1	4	4	31
Tech. sch.	15	1	4	1	21
TOTAL	67	3	10	5	85 ⁵
	78.8%	3.5%	11.7%	5.8%	100%

(3) Possible answers, in every case, were: Lekeitio Basque (abbreviated in the tables as Lek.B.) , Standard Basque (St.B.), Spanish (Span) and 'other, fill in the blank'. As it turned out, languages other than Basque and Spanish were not mentioned in any answer. The category 'other', thus, refers exclusively to other Basque varieties (Other B.). Some students gave more than one language as answer to a given question. In that case, 'Spanish and Basque' has been included under Spanish, and 'Lekeitio Basque and Standard Basque' has been counted as Standard Basque.

(4) We also asked about the language generally used with father and mother. But, since in this case the element of choice may be absent with more frequency (because the parent does not speak Basque or Lekeitio Basque), we do not present those results here.

(5) Three students indicated that they did not have any siblings.

2. Generally, what language do you speak with your friends on the street?

	Lek.B.	St.B.	Span.	Other B.	Total
Ikastola	32	0	2	0	34
Public sch.	21	1	8	3	33
Tech. sch.	17	0	3	1	21
TOTAL	70	1	13	4	88
	79.5%	1.1%	14.7%	4.5%	100%

3. Generally, what language do you speak with your friends at school?

	Lek.B.	St.B.	Span.	Other B.	Total
Ikastola	33	1	0	0	34
Public sch.	26	2	3	2	33
Tech. sch.	19	1	0	1	21
TOTAL	76	4	3	3	88
	86.3%	4.5%	3.4%	3.4%	100%

From these data we can conclude that Lekeitio Basque is clearly the preferred language of interaction among school children. What is surprising for us is the very small impact that education in Standard Basque appears to be having in the use of this variety outside of formal instruction. Only four students report using primarily Standard Basque to communicate with friends at school (one of whom actually gave both Lekeitio Basque and Standard Basque in answer to this question). In other contexts, the preference for Standard Basque is even lower. It should be pointed out that the three students who reported using Standard Basque (or both Lekeitio Basque and Standard Basque) with their siblings had at least one parent who was not from Lekeitio. The one student reporting using Standard Basque on the street had a parent from outside of the Basque Country and was him-/herself born in Southern Spain.⁶ As for Spanish, 9 of the 10 students who reported using primarily this language (or both Spanish and Basque) with their siblings had at least one parent who was not from Lekeitio, with whom they communicated in Spanish. On the street, the reported use of Spanish is greater; but still it is well behind the local Basque variety. Naturally, figures for Spanish usage would have been higher had we included as subjects more students in Models A and B. However, as mentioned above, our purpose was to determine the relative strength of Standard Basque and the local variety.

To see if students consider Standard Basque (in which they are being educated) a high prestige variety within the local community, we introduced a question about the language that they would like for the local authorities to use in formal occasions. The question and quantified responses were the following:

(6) We conducted an extended oral interview with a 13 year old who attends the Ikastola. She confirmed to us that communication in Standard Basque is confined to student-teacher interaction and exchanges between students within the instructional context.

4. What language should the mayor of Lekeitio use when speaking to the townsfolk?

	Lek.B.	St.B.	Span.	Other	Total
Ikastola	33	1	0	0	34
Public sch.	29	2	2	0	33
Tech. sch.	21	0	0	0	21
TOTAL	83	3	2	0	88
	94.3%	3.4%	2.3%	0%	100%

As can be seen, students overwhelmingly prefer for the local authority to use the local variety. We had a final question about preference in communicating with Basque-speakers from other towns:

5. In what language do you prefer to speak with Basque-speakers from Ondarroa or other towns?

	Lek.B.	St.B.	Span.	Other B.	Total
Ikastola	25	7	0	2	34
Public sch.	24	3	1	5	33
Tech. sch.	14	3	2	2	21
TOTAL	63	13	3	9	88
	71.3%	14.7%	3.4%	10.2%	100%

It is interesting to note that even when speaking to speakers of other local Basque varieties, students show a preference for Lekeitio Basque. Nevertheless, many more students indicated a preference for Standard Basque in this question than in the questions discussed before. In the question we gave Ondarroa as an example. This is a neighboring and also strongly Basque-speaking coastal town, whose variety, although clearly different from that of Lekeitio, is still felt as not too distant. Had we referred in our question to communication with Basque-speakers from non-Biscayan areas, very likely Standard Basque would have been a more frequent answer.⁷

To conclude, Lekeitio Basque does not appear to be in imminent danger of extinction. It certainly does not seem that it will be replaced in its functions by Standard Basque in the near future. Spanish poses a greater threat. But the danger to the survival of Basque in the form of the increasing presence of the Spanish language, brought in by tourism and improved communications, is being checked by the strong loyalty towards the Basque language that speakers feel and by the fact that Spanish has been displaced from its former role as the sole vehicle in education and the mass media.⁸

(7) Since the need to communicate with Basque-speakers from far-away areas may not have arisen in the experience of many students, we preferred to word the question as we did.

(8) When the present generation of school children reaches reproductive age, most of them will have three codes at their disposal: Lekeitio Basque, Standard Basque and Spanish. Which one of the three they will choose to transmit to their children is something about which it is not possible to make an educated guess.

1.2. Lekeitio Basque among the Basque dialects

The groundwork on Basque dialectology was laid in the second half of the past century by the Prince Louis-Lucien Bonaparte (1863, 1869, among other works). In an impressive achievement, Bonaparte collected information from all areas of the Basque Country, establishing a long-lasting classification in dialects, subdialects and varieties.⁹ Although some relatively minor modifications have been proposed, Bonaparte's classification is still followed today (cf., for instance, Etxebarria 1983, Yrizar 1981, Txillardegi 1983).¹⁰

The Basque variety spoken in Lekeitio was included in Bonaparte's classification of Basque dialects in the variety of Markina, within the eastern subdialect of the Biscayan dialect of Basque.

In his dialectological work, Bonaparte employed some criteria that nowadays seem peculiar to us. Examples of these are the central role that he gives to literary dialects (those with a written tradition) and his belief in the existence of 'pure' (and mixed) dialects. Nevertheless, his classification has proven to be an achievement of lasting importance.

Naturally, Basque dialects are not compact entities, separated by impenetrable boundaries. As one would expect, the features that are usually taken as characteristic of a given dialect do not all have the same geographical distribution, but each one presents its own isogloss. In our particular case, some of the features that are usually considered as typically Biscayan surpass the geographical limits which Bonaparte gave to this dialect, whereas some others are found only in parts of the Biscayan territory (Lakarra 1986, Zuazo 1988). Nevertheless, for the purpose of locating Lekeitio Basque within the varieties of this language it can be helpful to briefly point out some of the 'Biscayan' features that it displays.

An aspect to which Bonaparte gave great weight in classifying major dialects is the shape of the present indicative forms of the transitive auxiliary. Lekeitio Basque has the typically Biscayan forms *dot* 'I have it', *dau* 's/he has it', contrasting with Gipuzkoan *det*, *du* and Navarrese and Labourdin *dut*, *du*.

Another Biscayan feature is a zero subject marker in past tense transitive forms; e.g.: *eban* 's/he had it' vs. *zuan* ~ *zuen* in Gipuzkoan and similar z- initial forms in other dialects.

A further Biscayan feature in inflected verbal forms is the extensive use of a pluralizing suffix */-s/*. In Lekeitio we find oppositions such as *dot/doda-s* 'I have it/them' *neban/neba-s-an* 'I had it/them', whereas in non-Biscayan areas we find corresponding forms such as *dut/d-it-ut*, *nuen/n-it-uuen*, respectively.

In nominal inflectional morphophonology, a feature that is often considered as characteristically Biscayan, although the isogloss is found well inside the Gipuzkoan territory (and even extends to the High Navarrese Burunda valley),¹¹ is the raising

(9) A great number of works by Bonaparte and his Basque collaborators have been recently reprinted by the Academy of the Basque Language or Euskaltzaindia (Bonaparte 1991).

(10) K. Zuazo (p.c.) rightly points out that this is in part due to the fact that progress in Basque dialectology has been relatively small since Bonaparte's times.

(11) Cf. Zuazo (1994).

of stem-final /a/ in inflected singular forms, versus its deletion in the same context in other dialects. In Lekeitio we find forms such as /alaba-a/ *alabia* 'the daughter', instead of *alaba*, which is found in central and eastern dialects.

Also in nominal inflection, a Biscayan feature is the comitative suffix *-gaz*, where other dialects have *-kin*. In Lekeitio this suffix is found in the singular; e.g.: *alabiágas* 'with the daughter', vs. *alaba(re)kin* in non-Biscayan dialects. In the plural, nevertheless, the suffix *-kin* is used in Lekeitio, and generally in eastern Biscayan: *alabákiñ* 'with the daughters' (some other Biscayan varieties, further to the west, have *alábakas*).

Two Biscayan syntactic features that have to do with the order of elements in the noun phrase are the postnominal position of the numeral *bi* 'two' and the prenominal position of demonstratives. Thus, in Lekeitio we find examples such as *liburu bi* 'two books', vs. *bi liburu* in non-Biscayan dialects, and *ori liburúa* or *ori liburuóri* 'that book', vs. *liburu (b)ori* in non-Biscayan dialects.¹²

Certain other features which are viewed as typically Biscayan are of less importance and have to do with differences in vowel quality in specific lexical items. In a few items such as *baltz* 'black', *txarri* 'pig' and *barri* 'new', Biscayan varieties (including Lekeitio) have a low vowel /a/, whereas other dialects have an /e/: *beltz*, *txerri* and *berri*.¹³ Similarly, in a few words there is an alternation involving the high vowels in Biscayan and non-Biscayan forms. Whereas in Lekeitio and other Biscayan varieties we find *gitxi* 'little', *uri* 'town' and *ule* 'hair', outside of the Biscayan area the corresponding forms are *gutxi* or *guti*, *(b)iri* and *(b)ile*.

There are also some lexical differences involving frequently used words. Examples are the word for 'how', whose Biscayan form (found in Lekeitio) is *sélan*, corresponding to *nola* in other dialects, and the word for 'without', *barik* in Biscayan and *gabe* in other areas (both from **bagerik*).¹⁴

From a phonological point of view, on the other hand, there is not any feature that could be used to characterize Biscayan Basque as a whole against the other dialects. A phenomenon of an innovative nature that may be mentioned in this respect, however, is that nowadays all varieties spoken in Biscay have lost the phonological opposition between apico-alveolar and predorso-alveolar fricatives and affricates that is still present in the other dialects. In Bonaparte's texts this neutralization is noted only for western subdialects of Biscayan. Rollo (1925) reports that the opposition was only marginal in Markina when he completed his fieldwork. Nowadays, the neutralization is found not only in all of Biscay but also in many parts of Gipuzkoa, both along the coast and in urban areas.

After having mentioned some of the distinguishing features of the Biscayan dialect, it is perhaps worth mentioning some of the most notorious features which distinguish the Lekeitio variety from the speech of neighboring towns.

(12) The postnominal placement of *bi* 'two' appears to have had a much greater geographical diffusion in previous centuries (cf. Zuazo 1988).

(13) Cf. also Lek. *sarratu* 'to close' from Sp. *cerrar*.

(14) The form *bage* is attested in some areas.

One of the most salient phonological features of the Lekeitio variety is the voiced prepalatal \check{z} /ʒ/, with fricative and affricate allophones, corresponding to /x/ in neighboring towns. We find a systematic correspondence among initial \check{z} - /ʒ/ ([ʒ] ~ [dʒ]) in Lekeitio (and in a few other towns), y- /j/ in some western areas (Txorierri, Arratia, Zeberio) and j- /x/ in most other areas of Biscay (and all of Gipuzkoa) (see map 2, adapted from Gaminde 1988):

(1)	Lekeitio	Getxo	Gernika
	$\check{z}an$	<i>yan</i>	<i>jan</i>
	$\check{z}akiñ$	<i>yakin</i>	<i>jakiñ</i>
	$\check{z}o$	<i>yo</i>	<i>jo</i>
	$\check{z}uan$	<i>yon</i>	<i>joan</i>
	$\check{z}oko$	<i>yoko</i>	<i>joko</i>

‘to eat’
‘to know’
‘to hit’
‘to go’
‘game’

We will offer here some speculations on the historical origin of these sound correspondences. The original pronunciation must have been a glide. This can be concluded from the morphological structure of the verbal forms that have been given as examples. The perfective participle of the oldest Basque verbs consists of a root, preceded by a prefix *e-* and usually carrying also an ending *-n* or *-i*. This structure is perfectly transparent when the root starts with a consonant, as shown in the following examples, where the participial form is compared with a conjugated form of the same verb (the third person singular of the present indicative):

(2)	<i>e-torr-i</i>	‘to come’	<i>d-a-torr</i>	‘s/he comes’
	<i>e-karr-i</i>	‘to bring’	<i>d-a-karr</i>	‘s/he brings’
	<i>e-kus-i</i> ¹⁵	‘to see’	<i>d-a-kus</i>	‘s/he sees’
	<i>e-gi-n</i>	‘to make’	<i>d-a-gi</i>	‘s/he makes’

Given this structure, the initial consonant of the perfective participle of ‘to eat’, ‘to know’, ‘to hit’ and ‘to go’ must then reflect an original *e-* as well, which became a glide before vowel-initial roots:

(3)	<i>*e-a-n</i>	>	[j]an	‘to eat’
	<i>*e-aki-n</i>	>	[j]akin	‘to know’
	<i>*e-o</i>	>	[j]o	‘to hit’
	<i>*e-oa-n</i>	>	[j]oan	‘to go’

The evolution of initial glides appears to have followed the same steps as in Spanish [j]>[ʒ]>[ʃ]>[x]. Lekeitio was not affected by the two latest changes, devoicing and velarization, which spread throughout the surrounding area, leaving Lekeitio as a conservative island.

It has often been thought that the palatal fricative that is found in western areas such as Getxo represents the most archaic pronunciation. Nevertheless there are facts to suggest that, in this area as well, initial glides originally became a palatoalveolar fricative [ʒ]. The current palatal pronunciation [j] would then represent a later

(15) Standard *ikusi*, with vowel raising. The form *ekusi* is nevertheless attested in some dialects.

development [ʒ] > [j]. What suggests that this may have been the actual development is that Old Spanish [ʒ] (Modern Spanish /x/) appears as [j] in some western areas in borrowings such as *yente* 'people' (O.Sp. [ʒente]) and *koyu* 'to take' (O.Sp. [koʒido]). The same conclusion can be drawn by comparing the Spanish and Basque forms of certain toponyms in this area. Not far from Bilbao, there are two towns whose Basque names are Leioa [lejoa] and Loiu [loju], whereas the Spanish names are Lejona [lexona] and Lujua [luxua], respectively. This correspondence, Basque [-j-] Spanish [-x-], can only be explained if we assume as original forms [leʒona] (intervocalic [-n-] was regularly lost in Basque) and [loʒua]. In these place names as elsewhere, [ʒ] regularly evolved into a voiceless velar fricative in the pronunciation of Spanish speakers. The Basque pronunciation was retained as [ʒ] until this sound became [j] in this area of Biscay, which may have been a relatively recent development. If this is so, the pronunciation of Proto-Basque initial glides found in western varieties such as Getxo, Arratia, etc, is not more archaic than that of Lekeitio; rather, the opposite would be true. Old Spanish /ʒ/ appears to have been preserved in Lekeitio in a number of borrowings such as *žente* 'people', *kontzižu* 'Town Hall', *žoiža* 'jewel', *kožidu* 'to gather the fishing gear', etc. An innovation in Lekeitio, on the other hand, may have been the realization of /ʒ/ as an affricate [dʒ] after pause and certain consonants.

Another respect in which Lekeitio appears as a conservative island is in not presenting a rule raising /a/ to [e] after a high vowel. This rule, low vowel assimilation, is found throughout the territory of Biscayan dialect within the province of Biscay, except for Lekeitio and three other isolated towns (see map 3, adapted from Gaminde 1988). In this case, we know that the process has spread considerably in very recent times. From Bonaparte's data, it appears that little more than a hundred years ago, the rule was found in areas such as Arratia, Otxandio (Ochandiano), Gernika and Laudio (Llodio), as well as in the variety that Bonaparte calls Central Biscayan. The varieties of Markina and Bermeo, on the other hand, did not possess the rule in the years 1862-1864, when Bonaparte published his texts.¹⁶ Nowadays the rule is found in those as well as most other Biscayan varieties. The rule was already established in Markina in the first decades of our century, as we know from Rollo's (1925) dialectal description.¹⁷ Lekeitio remains as a conservative area in not having adopted this innovation.

A morphological characteristic of Lekeitio Basque is the loss of the opposition between certain bivalent and trivalent forms of the transitive auxiliary. Thus, corresponding to both the bivalent form *nasu* 's/he has me' and the trivalent *dostasu* 's/he

(16) For the Central Biscayan, Markina, Bermeo, Arratia and Otxandio varieties comparative translations of the same text can be found in Bonaparte (1991: II, 45-60). The variety of Laudio (Llodio), which appears to have had the interesting characteristic that low vowel assimilation was triggered by underlying, but not derived, high vowels (e.g. /gusti-a/ *gustie* 'all' vs. /fede-a/ *fedia* 'the faith'), is illustrated in Bonaparte (1991: II, 17-41). The existence of low vowel assimilation in the variety of Gernika is mentioned in a footnote in Bonaparte (1991: I, 259).

(17) On the other hand, a rule inserting /b/ after /u/ in the same morphological environments, which had a considerable extension a century ago, has been lost in most of its former territory. Rules affecting vowel sequences thus appear to be gained and lost with extraordinary ease and speed. In the variety of Markina, for instance, /esku-a/ 'the hand' was pronounced *eskuba* in Mogel's and Bonaparte's times, but *eskue* when Rollo wrote his description, some fifty years later, and is nowadays *eskue*.

has it to me' in the neighboring variety of Ondarroa (and similar forms in other Biscayan varieties), in Lekeitio we find only *nasu*, with both meanings. The same phenomenon is found far away from Lekeitio in coastal areas of Gipuzkoa (e.g. Hondarribia, Donostia-San Sebastian) and Labourd.

Another feature that distinguishes Lekeitio from neighboring varieties, and the last one that we will mention, is its accentual system. Lekeitio is located within an accentual area where there is a basic distinction between accented and unaccented words. Accents are, for the most part, lexical properties of morphemes, both roots and affixes. In most varieties near Lekeitio, accented roots always bear an accent on a given syllable and accentually marked suffixes are generally preaccenting, placing an accent on the preceding syllable (cf. Hualde 1991, 1993, Hualde & Bilbao 1993). Thus, an accented root with initial accent such as /bélarri/ 'ear' maintains initial accent in all of its inflected forms, e.g.: *bélarriže* 'the ear, abs', *bélarrižeri* 'to the ear, dat', etc.; and preaccenting suffixes such as the plural abs/erg /'-ak/ or the plural dat /'ari/ give rise to words accented on the syllable preceding the suffix such as *gixónak* 'the men', *gixónari* 'to the men', *itturrižek* 'the fountains', *itturrižeri* 'to the fountains, dat', when attached to the unaccented roots /gixon/ 'man', /iturred/ 'fountain' (cf. the corresponding unaccented singular forms *gixona* 'the man', *gixonari* 'to the man', *itturriže* 'the fountain', *itturrižeri* 'to the fountain'). When both root and suffix are accented or, in general, a word contains more than one lexical accent, only the leftmost one surfaces. In some varieties spreading irregularly over a large territory and including towns very close to Lekeitio, such as Gautegiz-Arteaga and Ereño, there has been a historical change whereby the accent has been retracted one syllable. A consequence has been that certain suffixes are prepreaccenting in those varieties (in some specific contexts); that is, they place an accent two syllables to their left, as in /gixon-''ak/ *gíxonak* 'the men', /gixon-''ari/ *gíxonari* 'to the men'. In Lekeitio there has been a shift in the opposite direction which has caused a radical restructuration of the system. As will be shown in section 2.8, in Lekeitio lexical accents surface on the penultimate syllable of the word, whether they are introduced by the root, as in *belarriža* 'the ear' or by an affix, as in *gixonári* 'to the men'. The accentual system of Lekeitio thus differs quite strikingly from that of other towns in the same area such as Gernika, Ereño or Markina. The accentual system of the variety of Ondarroa shares the rule placing lexical accents on the penultimate syllable, but differs from Lekeitio in other respects.

Lekeitio Basque also appears to possess some peculiar intonational contours not used in neighboring varieties (e.g. in yes-no questions, cf. 2.9.2); but we lack descriptive work in this area for other Basque varieties.

These are, thus, some of the most noticeable features in which Lekeitio Basque differs from neighboring varieties. A detailed comparision of any two varieties (e.g. Lekeitio and Ondarroa or Lekeitio and Ereño) would reveal many other respects in which each variety presents unique features.

2. PHONOLOGY

2.1. Sound inventory

The Basque variety spoken in Lekeitio has the following sound inventory:

(1)	labial	dent/alv	(pre)pal	vel		
	p	t	(c)	k	i	u
	b	d	(ɟ)	g	e	o
	f	s	(ʃ)	x		a
			3			
		ts	tʃ			
		(dz)	(dʒ)			
m	n		(ɲ)			
	l		(ʎ)			
	r					
	ñ					
	(w/ŵ)		(j/ ÿ)			

Those sounds whose phonemic status is dubious or are clearly allophones of other, more basic, sounds are given in parentheses. The reasons for this consideration are given in the corresponding sections.

The orthography that is employed in this study is based on standard Basque spelling conventions, but adapted to the specific pronunciation of the Lekeitio dialect. The following letter-sound correspondences are to be noted:

tz	[ts]	voiceless (predorsal)alveolar affricate
ž	[ʒ], [dʒ]	voiced prepalatal fricative or affricate.
x	[ʃ]	voiceless prepalatal fricative
tx	[tʃ]	voiceless prepalatal affricate.
tt	[c]	voiceless palatal stop (allophone of /t/).
dd	[ɟ]	voiced palatal stop (allophone of /d/).
y	[ʎ]	voiced palatal fricative or approximant (allophone of /i/ in syllable-initial prevocalic position).
ł	[j]	palatal on-glide.
w	[ŵ]	voiced labiovelar fricative or approximant (allophone of /u/ in syllable-initial prevocalic position).
ň	[w]	rounded labio-velar on-glide.

<i>j</i>	[χ]	voiceless velar fricative.
<i>ñ</i>	[ɲ]	palatal nasal.
<i>ll</i>	[ʎ]	palatal lateral.
<i>rr</i>	[ɾ]	rhotic trill (intervocally and word-initially).
<i>r</i>	[r]	rhotic flap intervocally and word-initially (elsewhere <i>r</i> represents a rhotic trill).

As mentioned, in using these orthographic symbols we follow standard Basque practice, except that standard Basque orthography does not have a symbol for the voiced prepalatal fricative or affricate found in Lekeitio. The symbol *ž* that we use to represent this sound has been employed by some authors in the transcription of Biscayan dialectal texts. The sounds that we represent with *y* and *w* usually are not distinguished orthographically from *i* and *u*, even in dialectal texts. We also mark nonsyllabic high vocoids as *í* and *ü* in those exceptional cases where their nonsyllabicity is not predictable from their position (cf. section 2.2.7).

In standard Basque orthography (as in Spanish) a word-initial rhotic trill is represented as *r*, the flap being excluded from this position in the language. In Lekeitio, however, an initial flap [r] is found in conjugated verbal forms as an allophonic form of /d/. For this reason, we deviate from standard practice in representing word-initial rhotic trills as *rr*.

Other graphemes have their usual phonetic value, with the particularities of pronunciation that will be indicated in the following sections.

In Lekeitio words can be lexically accented (always on the penultimate syllable) or unaccented (see section 2.8). Lexical accents will be indicated with an acute accent mark in both orthographic and phonetic representation; e.g.: *arbóla* [ar̥bóla] 'tree', *arbólía* [ar̥bólía] 'the tree' *gixónak* [giʃónak] 'the men'. In phonological representation, lexical accents will be represented with an asterisk following the lexically accented morpheme; e.g.: /arbola*/ 'tree', /arbola*-a/ 'the tree', /gison-ak*/ 'the men'.

2.2. Description of phonemes and principal allophones

2.2.1. Stops

There are three phonemic voiceless stops: bilabial /p/, dental /t/ and velar /k/. These consonants appear unrestrictedly in onset position (2a). /k/ and /t/ (but not /p/) are also found in word-final codas (2b) (cf. section 2.3.3.2). The restriction against labial consonants in a coda is found throughout the Basque-speaking domain:

- (2) a. *paper* 'paper', *aparižo* 'fishing equipment', *kánpo* 'outside', *arpei* 'face', *tentel* 'stupid', *ate* 'door', *kaižola* 'cage', *soka* 'rope', *ainka* 'leg'
b. *bat* 'one', *bost* 'five', *ónak* 'the good ones' *klok* (éindda) 'full'

Stops do not appear in word-internal codas, except in the pronunciation of recent borrowings from Spanish by younger speakers; e.g. Sp. *helicóptero* [elikotéro] (older speakers) or [elikoptéro] ~ [elikóptero] (younger speakers) 'helicopter'; Sp. *dictador* [ditaðor] or [diktaðor] 'dictator'. But even for younger speakers, these stops are very weakly articulated. Assimilated borrowings show the deletion of

stops in word-internal codas: Sp. *corrector* > *korretor* [ko'retɔr] 'device for correcting a physical deficiency', Sp. *doctrina* > *dotriña* [dotriña] 'doctrine', Sp. *infecta* > *infeta* [imfeta] 'to become infected', Sp. *infección* > *infesiño*.

The only significant allophony is presented by /t/ which, in palatalization contexts, i.e. after a front high vocoid or palatal sonorant, is realized as a palatal stop [c] by older speakers and as a prepalatal affricate [tʃ] by the younger generations. Middle-aged speakers present both pronunciations as palatal allophones of /t/ in seemingly free variation:

- (3) *mendi[c]ik ~ mendi[tʃ]ik* 'from the mountain', *ei[c]éko ~ ei[tʃ]éko* 'for making', *ai[c]a ~ ai[tʃ]a* 'father', *poli[c]a ~ poli[tʃ]a* 'pretty'.

In the speech of younger speakers, /t/ has completely merged with the prepalatal affricate phoneme /tʃ/ in this context. Only in those morphemes where a morphophonological alternation between [t] and [tʃ] is found will it be justified to posit underlying /t/ for surface [tʃ] for those speakers. When there is no alternation, the distinction between the two phonemes /t/ and /tʃ/ has effectively been neutralized after a front high vocoid. That is, whereas for [mendítʃik] 'from the mountain' we must postulate underlying /mendi-tik*/, cf. [basótik] 'from the forest' etc., monomorphemic [aitʃa] 'father' or [síntʃa] 'tape' (Sp. *cinta*) could equally well be represented as /aitʃa/, /síntʃa*/ or directly as /aitʃa/, /síntʃa*/. An archiphoneme might be postulated in this environment.

Unless otherwise indicated, the orthographic representations that will be used in the examples and in the lexicon follow the pronunciation of those older speakers who maintain the distinction: *mendítik* 'from the mountain', *aitta* 'father', *síntta* 'tape'. That is, the grapheme *tt* indicates that the sound is potentially pronounced as [c] by some speakers. Spellings such as *mendítxik* (where *tx*= [tʃ]) will be used when the pronunciation of the younger generations in particular is discussed.

The gradual merge of [c] and [tʃ] can be observed when the pronunciation of speakers of different age groups is compared (cf. the texts in section 5). Old speakers consistently maintain the distinction between these two sounds, although [tʃ] is found in their speech in some items where, from an etymological point of view, [c] would be expected.¹ Middle-aged speakers have variation between [c] and [tʃ] as palatal allophones of /t/; e.g.: /ei-ten*/ [éjcen] ~ [éjt̪en] 'make, do, imp', presenting, thus, a situation of partial merger with the affricate phoneme /tʃ/, realized always as [tʃ], of other words such as /etʃe-a/ [etʃia] 'the house'. Young speakers lack the palatal stop altogether, using [tʃ] instead in every case. Young speakers produce [c] only when imitating the pronunciation of older speakers (for humoristic or other purposes) or when using words such as *kuttun* 'dear', which are not part of the lexicon of the younger generation (the pronunciation *[kutʃun] is not found).²

(1) As in the auxiliary form *dixus* 's/he V's them' (cf. St. B. *ditu*), which is pronounced with an affricate even by old speakers who, otherwise, have the stop in *saittu* 'I V you', etc.

(2) The word *kuttun* 'dear', which alternates with *kutun*, is also exceptional in that its palatal stop is not conditioned by the presence of a preceding /i/. This word represents an isolate instance in the Lekeitio dialect of a phenomenon of 'affective palatalization' which has productivity in eastern and central dialects (cf. Hualde 1991: 121-123, Oñederra 1990: 57-74). In pairs such as *inúrril/txiñúrrí* 'ant' and *pispilddu/txispilddu* 'to become happy, esp. after drinking', the second form would also have its origin in 'affective palatalization'.

There are three voiced stops, bilabial /b/, dental /d/ and velar /g/ found only in onset position:

- (4) /b/ *baba* 'bean', *bónba* 'bomb'
- /d/ *dodore* 'elegant', *adurra* 'saliva' *andra* 'woman'
- /g/ *gorri* 'red', *agur* 'good-bye', *ango* 'of there'

These three phonemes have both continuant and noncontinuant allophones with the same distribution as in Castilian Spanish (cf. section 2.5.10). In addition /d/ presents an allophone [r] in intervocalic position (with certain morphological restrictions, cf. section 2.5.10): *aba[ð]e* ~ *aba[r]e* 'priest'. This allophone of /d/ is identical to the basic allophone of the independent phoneme /r/.

The dental /d/ also has a palatal allophone after a palatal noncontinuant consonant (cf. section 2.5.2). This allophone is realized as a palatal stop [ʃ] by older speakers. Younger speakers have a prepalatal allophone [dʒ] identical to the affricate allophone of /ʒ/ (see 2.2.3): /ein dau/ [ejnʃaw] ~ [ejndʒaw] 's/he has done it'. The same issues for phonemic representation arise as in the case of /t/.

2.2.2. Affricates

Lekeitio Basque possesses two voiceless affricate phonemes: predorso-alveolar /ts/ /tz/ and alveopalatal (or prepalatal) /tʃ/ /tx/. These can occur both in onsets and in codas:³

- (5) /ts/ *atzo* 'yesterday', *entzun* 'to hear', *antz* 'resemblance', *bartz* 'lice egg'
atz 'stench', *matz* 'grape'
- /tʃ/ *txori* 'bird', *etxe* 'house', *antxiña* 'long time ago', *atx* 'rock'

As was mentioned above, [tʃ] is also an allophone of /t/ in palatalization contexts in the speech of the younger generations.

In addition to these voiceless affricates, there is also a voiced predorsoalveolar affricate /dz/ which occurs only word-initially in a reduced number of words which are either onomatopocias or derive from onomatopoeias (see Vocabulary for complete list of examples):

- (6) /dz/ *dzangada* 'jump in the water', *dzast* 'sting', *dzist* 'little sting'

2.2.3. Fricatives

There are three voiceless fricative phonemes: labiodental /f/, apico-alveolar /s/⁴ and velar /χ/ /j/. In addition, there is a voiced alveopalatal fricative /ʒ/ /ž/. Of these, the only one which can appear in a coda is /s/; although a velar fricative [χ] occurs in a

(3) As mentioned in section 1.2, conservative dialects of Basque have an apico-alveolar voiceless affricate /tš/, orthographically represented as *ts*, and a predorso-alveolar or dental /ts/, orthographically represented as *tz*. The distinction has been lost in all of Biscay as well as in parts of Gipuzkoa.

(4) As with the affricates, most non-Biscayan varieties of Basque distinguish between an apico-alveolar /s/ phoneme, represented as *s*, and a predorso-alveolar /sl/, represented as *z*.

coda in a few recent borrowings from Spanish; e.g.: Sp. *signo* [síxno] 'sign'. The distribution of the voiceless fricatives is illustrated in (7):

(7) voiceless fricative phonemes and allophones

- /f/ *feúa* 'the ugly one', *afari* 'dinner', *fanfárra* 'fanfare'
- /s/ [s] *sasi* 'bush', *ames* 'dream', *béste* 'other'
- [z] *esne* [ezne] 'milk'
- [ʃ] *gixon* [giʃon] 'man', *máixo* [májʃo] 'male teacher'
- /χ/ *ejénplu* [exémplo] 'example', *jenéró* 'merchandise', *jenížo* 'temper',
jaun [xawn] 'sir', *gixájo* 'poor man', *Jainko* 'God'

The labiodental /f/ appears mostly, but not exclusively, in borrowings. Some old borrowings present replacement of this sound with /p/. In a number of such loanwords, both pronunciations with /f/ and /p/ are found; the pronunciation with /p/ being more frequent in the speech of older speakers: Sp. *fraile* > *fraille* ~ *praille* 'monk', Sp. *francés* > *frantzes* ~ *prantzes* 'French', Sp. *fanfarrón* > *fanfarro* ~ *panparro* 'braggard'. A native word for which pronunciations with both /f/ and /p/ are found is *afari* ~ *apari* 'dinner'. A change /f/ < /b/ appears in the verb *brízidu* 'to fry' < Sp. *freído*.

As shown in (7), the apico-alveolar /s/ is voiced before a voiced consonant.

The prepalatal [ʃ] x, which has phonemic status in many Basque varieties, in Lekeitio appears to be only an allophone of /s/ which occurs in contexts of palatalization; that is, after a front high vocoid (see section 2.5.4). Even in borrowings with /ʃ/ in the lender language, a palatal glide has been inserted before this consonant thus placing it in the context where the prepalatal allophone of /s/ occurs; e.g. Old Sp. [kóʃo]>Lek. B. [koʃo] (interpretable as /koiso/, given the rule of palatalization). Basque names which in other dialects (and in the orthography) have initial [ʃ] such as *Xabier*, *Xabin*, etc., are pronounced in Lekeitio with [s]: [saβier], [saβiŋ]. In this respect, it is interesting to note that Old Sp. [ʃ]abón has given [tʃ]abo(i) 'soap' and O.Sp. [ʃ]eringa has become [tʃ]irínga 'syringe'. Initial [ʃ] was, thus, replaced by the affricate [tʃ] at an earlier stage.⁵

The fricative /s/ is rare in postconsonantal position, appearing in this position only in recent borrowings. In the native vocabulary and integrated borrowings the affricate /ts/ occurs to the exclusion of /s/ in postconsonantal position. The examples in (8) show the effects of a process of postconsonantal affrication in the adaptation of borrowings:

(8)	Sp. <i>pienso</i>	>	<i>pentzu</i>	'fodder'
	Sp. <i>pensa-</i>	>	<i>pentza</i>	'to think'
	Sp. <i>percebe</i>	>	<i>pertzébe</i>	'barnacle'
	Sp. <i>persona</i>	>	<i>pertzóna</i>	'person'
	Sp. <i>jersey</i>	>	<i>kertze</i>	'sweater, jersey'
	Sp. <i>conversación</i>	>	<i>konbertzasiño</i>	'conversation'
	Sp. <i>morcilla</i>	>	<i>murtzilla</i>	'blood-sausage'

(5) The historical neutralization of initial /ʃ/ and /tʃ/ has taken place in most of the Basque Country. Whereas in Biscayan and Gipuzkoan word-initial /ʃ/ was changed to /tʃ/, in Labourdin and Low Navarrese the neutralization was in favor of /ʃ/ (Michelena 1985:191).

Some borrowings, nevertheless, have not undergone this adaptation and preserve /s/ in this position. In some words, both possibilities are found:

(9)	Sp. <i>persiana</i>	>	<i>persiána</i>	'Venetian blind'
	Sp. <i>pensión</i>	>	<i>pensiño ~ pentziño</i>	'pension'
	Sp. <i>baloncesto</i>	>	<i>balontzésto~ balonsésto</i>	'basketball'
	Sp. <i>parcela</i>	>	<i>parséla</i>	'lot of land'
	Sp. <i>ensalada</i>	>	<i>ensalada ~ entsalada</i>	'salad'
	Sp. <i>consulta</i>	>	<i>konsúltia</i>	'consultation'
	Sp. <i>conseguido</i>	>	<i>konsegidu</i>	'to obtain'
	Sp. <i>príncipe</i>	>	<i>prinsípe ~ printzípe</i>	'prince'

The situation is thus similar to that which has been described for Getxo (Hualde & Bilbao 1992: 4-6), although in Lekeitio the exceptions to the rule of affrication are relatively fewer, which would indicate that the process of affrication has been active and obligatory in Lekeitio until a more recent time than in Getxo.⁶ Loanwords that fail to undergo affrication or present variation are not necessarily more recent than those with affrication; since old adapted borrowings may have lost the affrication under the influence of the Spanish model. There is no affrication of /s/ across morpheme or word boundaries:

(10)	/mutil-sar/	[mutílsar]	'bachelor' (lit. 'old boy')
	/emon san/	[emonsan]	'was given'
	/il san/	[ilsan]	's/he died'

The velar /x/ appears only in four or five native words, and in a considerable number of borrowings from Spanish. Although this sound must be considered a completely integrated phoneme, its adoption in Lekeitio appears to be very recent. Even some very modern borrowings which have /x/ in Spanish have been adapted with /k/ in Lekeitio Basque. Examples of words where Sp. /x/ has been replaced by /k/ are: Sp. *Julián* > *kulian*, Sp. *jersey* > *kertze* 'sweater', Sp. *traje* > *tráke* 'suit', Sp. *gitano* > *kittáno* 'gypsy', Sp. *colegio* > *kolekízo* 'school', Sp. *sargento* > *sarkénto* 'sargent', etc.⁷ The rarity of /x/ in Lekeitio contrasts with its frequency in surrounding varieties (Ondarroa, Gernika, etc.). The reason for this is that Proto-Basque word-initial yod, maintains the conservative prepalatal pronunciation /ʒ/ in Lekeitio, whereas in all of Gipuzkoa and a great part of Biscay this sound has evolved to [x] ([ʒ]>[ʃ]>[x]). Thus, whereas in Ondarroa, Gernika, etc., for instance, the word for 'to eat' is [xan], in Lekeitio it is [(d)ʒan] (cf. section 1.2). Native words presenting a voiceless velar fricative such as *jaun* 'sir', *Jainko* 'God' and *gixájo* 'poor man' can be considered cases

(6) Notice that some borrowings that must necessarily be quite recent, such as *kertze* 'sweater' and *balontzésto* 'basketball', present affrication.

(7) Some of these words present alternants with /x/, which are preferred by younger speakers (*Julian*, *tráje*, *jitzáno*, *sarjénto*).

of interdialectal borrowings. The same small set of items appears with /x/ in other varieties where this sound is not the product of regular sound change, both in western Biscay and in Navarre (cf., for instance, Michelena 1985: 170, fn. 7, Hualde 1993b: 3, fn. 5, Hualde & Bilbao 1992: 4, Etxebarria Ayesta 1991: 111).

Lekeitio Basque also has a voiced alveopalatal fricative phoneme /ʒ/ ţ which only occurs in onset position. This phoneme presents an affricate allophone utterance-initially and after a nasal (see section 2.5.11), being realized as a fricative elsewhere:

- (11) /ʒ/ [dʒ]un da 'he went', etxera [ʒ]un da 'he went home',
 [dʒ]ai[ʒ]o 'to be born'.

The orthographic symbol ţ will be used for both the fricative and the affricate allophones, just as no distinction is made between the continuant and noncontinuant allophones of /b,d,g/ in orthographic representation: žun da, etxera žun da, žaižo.

As many other central Biscayan varieties, Lekeitio Basque presents [ʒ] as an epenthetic sound inserted between /i/ and another vowel in certain morphological contexts; e.g.: /mendi-a/ [mendiʒa] 'the mountain' (see section 2.6.2).⁸ Some borrowings from Old Spanish also preserve this sound. Examples are kožidu 'to gather the nets' < O.Sp. cogido, kontzižo 'Town Hall' < O.Sp. concejo, monža 'nun' < O.Sp. monja, žente 'people' < O. Sp. gente, žoiža 'jewel' < O. Sp. joya.

2.2.4. Nasals

On the surface there is a contrast between three nasal sounds in prevocalic position: bilabial /m/, alveolar /n/ and palatal /ɲ/ ň.:

(12)	#	V __ V	C __ V
/m/	merke 'cheap'	moma 'shark, spec.'	asma 'to make up'
/n/	neska 'girl'	ana(i)ža 'brother'	arnas 'breath'
/ɲ/	(ňo) 'interjection'	kaňabera 'cane'	—

The phonemic status of the palatal nasal is, however, questionable. Word-initially, [ɲ] is only found in the interjection ňo. This sound is, otherwise, restricted to the intervocalic position. But, even in this position, there are reasons to consider it an allophone of /n/. This is because there is a rule which palatalizes /n/ after a high front vocoid, which optionally involves the absorption of a palatalizing glide; e.g. /ařain-a/ [ařaj̩na] ~ [ařaj̩n̩a] 'the fish' (cf. section 2.5.2). Postvocalic [ɲ] can thus be interpreted as a sequence /jn/, which makes its phonemic status very dubious. In fact, most words containing an intervocalic [ɲ] admit a pronunciation with a preceding glide; e.g.: [kajnařbera] ~ [kajnařbera] 'cane', [sóňnu] ~ [sójňnu] 'sound', [bajna] ~

(8) In Gernika, Bermeo, etc., /mendi-a/ 'the mountain' is realized as [mendiʒe]. For the raising of /a/ to [e], cf. Hualde (1991, ch. 2). To the east of this area (in Markina, Ondarroa and a neighboring area in Gipuzkoa), this consonant has been devoiced to /ʃ/. Thus our example is pronounced as [mendise] in Ondarroa and Markina, and as [mendiʃa] in Bergara and Eibar.

[bajna] 'but', [bája] ~ [bájna] 'case' < Sp. *vaina*. The only words that do not admit an optional glide before a palatal nasal (besides those where this sound is preceded by syllabic /i/) are some borrowings for which the Spanish model does not permit deviation such as *señora* *[sejñóra] 'dame', *pestáña* *[pestájna] 'eyelash'. In all native and nativized words, on the other hand, a palatal glide can be optionally pronounced before the palatal nasal. This leads us to question the phonemic status of /ɲ/ in Lekeitio.

The phonological contrast among the nasal phonemes is neutralized in coda position. A nasal takes the point of articulation of a following consonant (see 2.5.1 for examples and discussion). We can, thus, assume an archiphoneme /N/ in coda position, with multiple realizations depending on the point of articulation of the following consonant.

Word-finally and not followed by a consonant, there is neutralization of nasals in [n]; except after a front high vocoid where the nasal that surfaces is [ɲ], as a consequence of the rule of palatalization already mentioned and which is studied in section 2.5.2:

(13)	a,e,o,u	— #	i	— #
	<i>gixo[n]</i>	'man'	<i>mi[ɲ]</i>	'pain'
	<i>esa[n]</i>	'to say'	<i>oi[ɲ] ~ o[ɲ]</i>	'foot'

2.2.5. Laterals

There are two lateral sounds which contrast in prevocalic position: alveolar /l/ and palatal /ʎ/ /ɿ/:

(14)	# —	V — V	C — V
/l/	<i>lau</i> 'four'	<i>kale</i> 'street'	<i>erle</i> 'bee'
/ʎ/	<i>llabería</i> 'the key-chain'	<i>allaga</i> 'to arrive'	—

The phonemic status of the lateral palatal is only marginal. Word-initially it only appears in borrowings. In other contexts, the same observations made with respect to the palatal nasal apply to the palatal lateral. In native and nativized words postvocalic [ʎ] can be optionally preceded by a front glide; e.g.: [prajʎe] ~ [prajʎε] 'fray' < Sp. *fraile*, [koʎára] ~ [kojʎára] 'spoon', [oʎásko] ~ [ojʎásko] 'chicken', [aʎaya] ~ [ajʎaya] 'to arrive' < Sp. *llega(r)*, etc. Given that a rule of palatalization of /l/ after a front high vocoid optionally triggers the absorption of a palatalizing glide, [Vʎ] ~ [Vjʎ] is thus interpretable as /Vil/. As with the palatal nasal, the only words that do not optionally admit a glide are borrowings which preserve the same shape as their Spanish source such as *sélico* *[sejʎko] 'stamp'.

In coda position, laterals assimilate to following consonants with some complications which are discussed in section 2.5.1.

Word-finally and not followed by a consonant, palatal [ʎ] appears after a front high vocoid (which can be optionally absorbed if it is not syllabic, as mentioned), and alveolar [l] appears after all other vocoids:

(15)	a,e,o,u	_____ #	i	_____ #
	asa[l]	'skin'	muti[ʎ]	'boy'
	ue[l]	'leather belt'	sai[ʎ]	'land lot'

2.2.6. Rhotics

There are two rhotic phonemes: a flap /ɾ/ and a trill /rr/. These sounds are found in phonological contrast only in the intervocalic position, as in all Basque dialects and the Ibero-Romance languages. Elsewhere only the trill is found. Word-initially rhotics are found only in recent borrowings:

- (16) a. Intervocally: *ba[r]e* 'calm' *ba[rr]e* 'laugh'
- b. Word-initial: *[r]adižúa* 'the radio' (only in recent borrowings)
- c. Preconsonantal: *a[r]tu* 'to take'
- d. After tautosyllabic consonant: *and[r]a* 'woman', *p[r]ákak* 'the pants'
- e. After heterosyllabic consonant: *al[r]ebes* 'upside down'
- f. Word-final, before pause: *ama[r]* 'ten'
- g. Word-final, before consonant: *ama[rr] morro* 'ten boys'
- h. Word-final, before vowel: *ama[rr] aberatz* 'ten wealthy people'

This situation of limited contrast resembles that found in Standard Spanish in that the phonemic distinction between the two rhotics is limited to the intervocalic position. Unlike in Spanish, however, in Lekeitio Basque and other Basque varieties the trill is the segment with the wider distribution, appearing in a number of contexts where Standard Spanish has the flap.⁹

Word-initial rhotics were not originally allowed in Basque. Loanwords starting with a rhotic regularly underwent epenthesis until recent times. Some Lekeitio examples are the following:

(17)	Spanish		
	<i>revisa-</i>	> <i>errebixa</i>	'to revise, review'
	<i>regalo</i>	> <i>erregálu</i>	'present, gift'
	<i>revista</i>	> <i>errebísta</i>	'journal, magazine'
	<i>recado</i>	> <i>errekarlo</i>	'errand'
	<i>respeto</i>	> <i>errespéto</i>	'respect'
	<i>remedio</i>	> <i>erremedízo</i>	'remedy'

Newer rhotic-initial borrowings do not undergo epenthesis (cf. Vocabulary under *R*).

(9) This same distribution also occurs in the regional Spanish spoken in the Basque Country, even that of monolingual Spanish speakers.

2.2.7. Vowels and glides

As in most Basque dialects, there are five vowel phonemes /i, e, a, o, u/ in Lekeitio. For the most part, the surface glides [j,w] are in complementary distribution with the high vowels /i,u/. High vocoids are always realized as glides in postvocalic position, both word-internally and across word boundaries:

(18)	<i>aingeru</i>	[ajŋgeru]	'angel'
	<i>nai</i>	[naj]	'desire'
	<i>lau</i>	[law]	'four'
	<i>arráusi</i>	[aráwsı]	'yawn'
	<i>neska ixilla</i>	[neskajʃiʎa]	'quiet girl'
	<i>ori umia</i>	[oriwmia]	'that child'

Immediately before another vowel, on the other hand, high vocoids are generally syllabic both in the native vocabulary and in integrated borrowings:

(19)	<i>burua</i>	[bu.ru.a]	'the head'
	<i>suerte</i>	[su.er.te]	'luck'
	<i>piura</i>	[pi.u.ra]	'aspect'
	<i>uel</i>	[u.el]	'leather belt'

Nevertheless, some borrowings present glides in this position:

(20)	<i>fuérte</i>	[fwér.te]	'strong'
	<i>gobiérno</i>	[go.βjér.no]	'government'
	<i>wélgia</i>	[wél.ya]	'strike'

We thus find quasi-minimal pairs such as [su.er.te] and [fwér.te]. Words such as those in (20), which, as we mentioned, are all fairly recent borrowings, must be interpreted as containing underlying glides.¹⁰ This is the only context in which high vowels contrast with glides.

As in Castilian Spanish, glides are strengthened in syllable initial position, becoming approximants or fricatives [w] and [j]:

(21)	<i>lau/lau/</i>	[law]	'four'	<i>lawa</i>	[la.ŵa]	'the fourth one'
	<i>kanpai/kanpai/</i>	[kam.paj]	'bell'	<i>kanpaya</i>	[kam.pa.ɟa]	'the bell'

Exceptionally, the final glide of the forms *dau* 's/he has (it)' and *nau* 's/he has me' becomes a bilabial fricative in intervocalic position when a suffix is added: *ikusi dabela* 'that s/he has seen (it)', *ikusi nabela* 'that s/he has seen me'.

In the intervocalic context, we find a contrast between accented syllabic high vocoids and the realization of unaccented high vocoids as fricatives or approximants when not bearing an accent:

(10) Or, alternatively, as being partially pre-specified for syllabification.

- (22) a. *desío* /desio*/ [de.sí.o] 'desire' *desiúa* [de.si.ú.a] 'the desire'
 pasiú /pasiu*/ [pa.sí.u] 'walk' *pasiúa* [pa.si.ú.a] 'the walk'
 b. *morau* /morau/ [mo.raw] 'purple' *morawa* [mo.ra.ŵa] 'the purple one'
 žaua /žauel/ [dʒa.ŵe] 'owner' *žavia* [dʒa.ŵi.a] 'the owner'

2.3. Syllable structure

2.3.1. Onsets

All consonants can appear in a word-internal onset (for word-initial restrictions cf. section 2.4). In addition to single consonants, clusters consisting of a stop or /f/ followed by a liquid /r/ or /l/ can appear both word-initially and in word-internal onsets, except for */dl/ and */tl/:¹¹

(23) Onset clusters

/pr/	<i>prá.kak</i>	'trousers'	/pl/	<i>pla.ter</i>	'plate, dish'
/tr/	<i>tris.ka</i>	'to destroy'	/tl/	_____	
/kr/	<i>kre.sal</i>	'sea water'	/kl/	<i>kla.be.li.ñia</i>	'carnation'
/fr/	<i>frés.ko</i>	'cool'	/fl/	<i>fláu.ta</i>	'flute'
/br/	<i>bri.ži.du</i>	'to fry'	/bl/	<i>blú.sa</i>	'blouse'
/dr/	<i>dran.ga.da</i>	'long drink'	/dl/	_____	
/gr/	<i>grix</i>	'grey'	/gl/	<i>gan.glí.žo</i>	'ganglion'

It should be noted that, although there are native words that present onset clusters, these are mostly found in words of nonnative origin.

2.3.2. Nuclei

All five vowel phonemes can obviously occupy the syllable nucleus.

Raising diphthongs are found only in nonadapted borrowings, since in native words and adapted borrowings sequences of vocoids of raising sonority are always heterosyllabic (cf. section 2.2.7):

(24) Raising diphthongs (borrowings)

[ja]	<i>estudiánte</i> 'student', <i>persiána</i> 'Venetian blinds', <i>negosjánte</i> 'businessman'
[wa]	<i>küartel</i> 'barracks'
[je]	<i>propiedad</i> 'property', <i>sentiménto</i> 'feeling', <i>obedíente</i> 'obedient', <i>esperléntzi</i> 'experience'
[we]	<i>büelta</i> 'turn', <i>pañuelo</i> 'handkerchief', <i>puestó</i> 'position'
[jo]	<i>nerblosó</i> 'nervous'
[wo]	<i>makalláwok</i> 'these cods' ([ŵo])
[ju]	_____
[wi]	<i>büître</i> 'vulture'

(11) It is interesting to note that the word *Athletic* (usual shortened name of the Athletic de Bilbao soccer team), which presents an onset /tl/ cluster in the regional variety of Spanish, is pronounced as [a.lé.ti] or [a.te.lé.ti] in Lekeitio Basque.

As mentioned, raising diphthongs are not found in the native vocabulary. Some borrowings containing such diphthongs have been adapted with a sequence in hiatus as in *s[u.e]rte* ‘luck’ < Sp. *s[wé]rte*. In a great number of examples we find that a diphthong has been broken by inserting [ʒ] after an original front glide, as in *jenízo* ‘temper’ < Sp. *gen[jo]*, *kanbiža* ‘to change’ < Sp. *camb[ja](r)*, *kalendarížo* ‘calendar’ < Sp. *calendar[jo]*, *negosížo* < Sp. *negoc[jo]*.

The insertion of [ʒ] or the preservation of the diphthong in a borrowing may depend on its phonological shape. The preferred contexts for the application of [ʒ]-insertion are [ja], [jo] diphthongs in word-final syllables. Compare *negosížo* and *negosíante* or the treatment of the two original diphthongs in *proprietarížo* ‘owner’ < Sp. *prop[je]tar[jo]*. Very recent borrowings may preserve the diphthong even when the context is the one that favors [ʒ]-insertion. Thus, whereas Sp. *seminario* ‘seminary’ has been adapted as *seminarížo*, in its more recent meaning of ‘seminar, advanced course’ this same word is sometimes rendered as *seminářo* without breaking the diphthong.

The following examples illustrate heterosyllabic sequences (hiatuses) where the first element is a high vowel:

(25) Hiatuses

- [i.a] *biáje* ‘trip’, *neskia* ‘the girl’, *siar* ‘through’
- [u.a] *burua* ‘the head’, *žuan* ‘to go’
- [i.e] *neskien* ‘of the girl’, *siesta* ‘siesta’
- [u.e] *suerte* ‘luck’, *buruen* ‘of the head’
- [i.o] *desío* ‘desire’, *umión* ‘of the children, prox.’, *umióna* ‘the one of the children, prox.’
- [u.o] *burúon* ‘of the heads, prox.’, *síok* ‘you-pl, prox.’
- [i.u] *pasíu* ‘walk’, *biurtu* ‘to twist’, *piura* ‘bad look’
- [u.i] _____

As mentioned above (cf. section 2.2.7), falling sequences of two vocoids where the second one is high are always tautosyllabic (diphthongs). Falling diphthongs are common in the native and nonnative vocabulary. The following falling diphthongs are found at the word level:

(26) Falling diphthongs

- | | | | |
|------|--|------|---|
| [aj] | <i>aista</i> ‘sister of female’, <i>bai</i> ‘yes’ | [oj] | <i>goi</i> ‘top’, <i>koipe</i> ‘grease’ |
| [aw] | <i>dauko</i> ‘s/he has’, <i>ardau</i> ‘wine’ | [ow] | _____ |
| [ej] | <i>eiñ</i> ‘to make’, <i>bedeinkasiño</i> ‘blessing’ | [iw] | _____ |
| [ew] | <i>sen</i> ‘you’, <i>euli</i> ‘fly’ | [uj] | <i>suiñ</i> ‘son-in-law’ ¹² |

There are no syllabic consonants.

(12) The diphthongs [wi] and [uj] are not easily distinguishable. A reason to consider that in *suiñ* the nonsyllabic element is the second vocoid is that it is absorbed in the following palatal consonant when a vowel follows: [suj ja] ~ [su ja] ‘the son-in-law, abs’.

2.3.3. Codas

2.3.3.1. Word-internal codas

Only the following consonants are permitted as word-internal codas:

- a. a nasal homorganic with a following consonant, e.g. *ka[m].po* ‘outside’, *a[n]go* ‘of there’
- b. a liquid /l/ or /r/, e.g. *al.de* ‘side’, *ar.te* ‘between’, and
- c. the coronal fricative /s/, e.g. *es.ker* ‘left; thank’.

As was mentioned, word-internal coda obstruents other than /s/ in borrowings from Spanish are generally deleted, although younger speakers may pronounce them as lax consonants in words such as *obsesiño* ‘obsession’, *síjno* ‘sign’, *elikoptero* ‘helicopter’, etc. (cf. section 2.2.1).

2.3.3.2. Word-final codas

Word-final codas present more possibilities than word-internal codas. In addition to a nasal [n] ([ŋ] after /i/), a lateral [l] ([ʎ] after /i/) a rhotic [r̩] and the fricative [s] ([ʃ] after /i/), the two voiceless affricates [ts] and [tʃ] and the voiceless stops [t] and [k] also occur in this position:

(27)	Nasals:	<i>gixo[n]</i> ‘man’, <i>ei[n]</i> ‘to make’
	Laterals:	<i>asa[l]</i> ‘skin’, <i>abi[ʎ]</i> ‘skillful’
	Rhotics:	<i>ada[r̩]</i>
	Fricatives:	<i>ame[s]</i> ‘dream’, <i>gri[ʃ]</i> ‘gray’
	Affricates:	<i>o[ts]</i> ‘cold’
		<i>/tʃ/ urra[tʃ]</i> ‘hazelnut’
	Stops:	<i>t/ kako[t]</i> ‘drunkenness’
		<i>/k/ gixóna[k]</i> ‘the men’

In addition, a few groups of two consonants are also allowed word-finally. The following groups are found:

(28)	/-st/	<i>bost</i> ‘five’	/-nts/ (/ -ns/)	<i>antz</i> ‘resemblance’
				<i>buskentz</i> ‘big belly’
	/-rt/	<i>bart</i> ‘last night’	/-lts/ (/ -ls/)	<i>baltz</i> ‘black’
			/-rts/ (/ -rs/)	<i>bartz</i> ‘lice egg’
				<i>umesurtz</i> ‘orphan’

All allowable word-final groups consist of two coronal consonants, the first of which is either continuant or sonorant (or both) and the second a stop or affricate. Since /s/ becomes [ts] after another consonant, it can be concluded that all possible final groups consist of two coronal consonants, of which (with the exception of /-rt/) one is /s/. These groups respect the sonority scale (i.e. more sonorous segments are closer to the nucleus than less sonorous ones).

Other groups are not permissible. The final group /rk/, which is created in morpheme concatenation, is simplified by deletion of the rhotic or epenthesis:

- (29) /nor-k/ *nok* or *nórek* 'who, erg.', cf. /nor/ *nor* 'who, abs.'

2.4. Word-initial restrictions

As in the Ibero-Romance languages, the rhotic flap /ɾ/ is excluded from word-initial position. In addition, the rhotic trill /r̩/ occurs only in recent borrowings from Spanish. Since, as in all Basque varieties, in older borrowings from Latin and Spanish there is vowel epenthesis before this consonant, as was illustrated in (17).

The dental fricative /ts/ does not occur word-initially either. This restriction is common to a large area of the Basque domain.

The palatal sonorants /ɲ/ and /ʎ/ are very rare word initially. The nasal palatal occurs in the exclamation *ñó* and the lateral palatal only in borrowings from Spanish such as *llabéro* 'key-chain'.

2.5. Main phonological processes affecting consonants

2.5.1. Nasal and lateral assimilation

As in many other languages and in all Basque dialects, in Lekeitio nasals take the point of articulation of a following consonant, both word-internally and across word boundaries:

- (30) bilabial: *ká[m]po* 'outside', *gixo[m]* *potolúa* 'the fat man', *bo[m]ba* 'bomb', *o[m]bat* 'a good one'
 labiodental: *fa[m]farro* 'braggard', *gixo[m]* *famosua* 'the famous man'
 apico-dental: *sá[n]tu* 'saint', *a[n]dra* 'woman', *gixo[n]* *dotoria* 'the elegant man'
 predorso-alveolar: *a[n]tz* 'resemblance', *balo[n]tzéstō* 'basketball'.
 apico-alveolar: *émo[n]saspi* 'give seven', *ártu[n]lau* 'take four', *éntzu[n]rradižúa* 'listen to the radio'
 prepalatal: *ame[n]txoriža* 'mother's bird', *ame[n] [dʒ]atéko* 'to eat here'
 palatal: *émo[n] [k]aberúa* 'give the key-chain'
 velar: *ai[n]ka* 'leg' *ame[n]go* 'of here', *gixo[n]* *gorriža* 'the red man'

Also as other Basque dialects and in Spanish, laterals are subject to a more restricted process of assimilation. Laterals assimilate to the point of articulation of following dental, alveolar, alveopalatal and palatal consonants and are realized as alveolar [l] before labials or velars:

- | | | | | |
|------|-------------------------|-----------------------------|----------------|--------------|
| (31) | <i>a[1]de</i> | 'side' | <i>a[1]per</i> | 'lazy' |
| | <i>ba[1]tzə</i> | 'the black one' | <i>a[1]kar</i> | 'each other' |
| | <i>berde[1] txikiñə</i> | 'the small verdel (a fish)' | | |

The more restrictive character of the assimilation in place of articulation of laterals, as compared with the nasals, follows from articulatory considerations (cf. Hualde 1991: 99). The facts can be summarized as follows:

- (32) Nasal and Lateral Assimilation: A noncontinuant sonorant (i.e. a nasal or lateral) must share the point of articulation of a following consonant.

Restriction: a lateral cannot have a velar or labial point of articulation.

2.5.2. Palatalization of noncontinuant coronals

Another assimilatory process affecting nasals and laterals is palatalization. The noncontinuant coronal sonorants /n/ and /l/ are palatalized after a high front vocoid (syllabic or nonsyllabic):

- (33) /in/ *agi[n]a* ‘the tooth’, *agi[n]* ‘tooth’; *mi[n]a* ‘the pain’, *mi[n]* ‘pain’,
mi[n] aundiža ‘the big pain’.
 /il/ *muti[ɿ]a* ‘the boy’, *muti[ɿ]* ‘boy’, *muti[ɿ] aundiža* ‘the big boy’;
abi[ɿ]a ‘the skillful one’, *abi[ɿ]* ‘skillful’, *abi[ɿ]idade* ‘skill’.

As shown, palatalization takes place when the target segment is in prevocalic position (in an onset; both word-internally and across word-boundaries) and also before pause. There are other dialects which present palatalization only when the target segment is in an onset; e.g.: *muti[ɿ]a* ‘the boy’, but *muti[l]* ‘boy’. This situation has been described, for instance, for the Gipuzkoan dialect of Donostia-San Sebastián (Iverson & Oñederra 1985) and for the Biscayan dialect of Getxo (Hualde & Bilbao 1992: 22-25).

As mentioned in section 2.3.3.2, all distinctions in place of articulation among both nasals and laterals are neutralized in a coda. The result of the interaction between this neutralization and the process of palatalization is thus that word-finally, either before pause or before vowel, [n] and [ɿ] occur after a front high vocoid, and [n] and [l] elsewhere:

- (34) *mi[n]* ‘pain’, *arrail[n]* ‘fish’
mi[n] aundiža ‘great pain’, *arrail[n] ederra* ‘the beautiful fish’
emo[n] ‘to give’, *esa[n]* ‘to say’, *lagu[n]* ‘friend’
gixo[n] ederra ‘the beautiful man’
muti[ɿ] ‘boy’, *matrai[ɿ]* ‘cheek’
muti[ɿ] aundiža ‘the big boy’, *matrai[ɿ] aundiža* ‘the big cheek’
asa[l] ‘skin’, *odo[l]* ‘blood’, *estu[l]* ‘cough’
asa[l] ederra ‘the beautiful skin’

Palatalization also affects noncontinuant coronal obstruents. The voiceless dental stop /t/ palatalizes in the same context as /l/ and /n/. The segment that results from the palatalization of /t/ is the voiceless palatal stop [c] in the speech of the older generation. For younger speakers, instead, the palatalization of /t/ results in the alveopalatal affricate [tʃ]:

- (35) /it/
 older generation: [ajca] ‘father’, /d-a-ki-t/ [dakic] ‘I know’, [icuři]

'fountain'

younger generation: [ajtſa], [dakitſ], [itſurī]

The voiced coronal obstruent /d/ is not palatalized after /i/. Instead, /d/ is realized as a continuant [ð] or [r] in this position (intervocally); e.g.: [eskriβiðu] ~ [eskriβiru] 'to write'. On the other hand, both /t/ and /d/ are palatalized when preceded by the sequences /il/, /in/:

- (36) /int/ [piŋca] ~ [piñtſa] (Sp. *pinta*) 'to paint', [síñca] ~ [síntſa]
 (Sp. *cinta*) 'tape'
 /ilt/ /il-ten*/ [ílcen] ~ [íl'tſen] 'to die, imperf'
 /ind/ [iŋɟar] ~ [iñdgar] 'strength', /ein dau/ [ejŋɟaw] ~
 [ejñdʒaw] 'has done it'
 /ild/ /il da/ [iʎja] ~ [il'dʒa] 'has died'

The palatalization rule is a lexical rule, unlike nasal and lateral assimilation. As such, it both presents lexical exceptions and is restricted to certain morphological contexts.

As Oñederra (1990: 33) points out, exceptions to palatalization are often found among words where the palatalizable consonant is both preceded and followed by /i/. In Lekeitio we find the following exceptions to the palatalization rule in this group:

- (37) *basilika* 'basilica', *famili* 'family', *gili-gili* 'tickles', *ixilik* (or *ixillik*) 'silent; *kikilíño* 'penis', *kikiliúsaín* 'smell of smoke', *kilin-kólon* 'so-so', *militar* 'military', *plastilíña* 'play dough', *txiliñ* 'small bell', *txiltzó* 'shout', *klinika* 'clinic', *minímo* 'minimum', *opiniño* 'opinion', *txita* (sg *txitia*) 'chick', *kritika* 'criticism', *pitillo* 'hem', *politika* 'politics', *titi* 'breast', *dindilíka* 'hanging', *trikilitika* 'on one foot', *fila* (sg *filia*) 'line', *lila* (sg *lilia*) 'lilly', *tíla* (sg *tilia*) 'linden tea', *pila* (*pilía*) 'battery'.

In addition, some borrowings which do not present the context in (37) also fail to undergo the rule:

- (38) *desilusíño* 'desillusion', *destíno* 'destiny', *jubila* 'to retire', *kilométro* 'kilometer', *madrileño* 'Madridian', *piloto* 'pilot', *seminarízo* 'seminary', *síne* 'cinema', *pitórro* 'spout'.

Most borrowings do, however, undergo palatalization, as the following examples show:¹³

- (39) Spanish
- | | | | | | | | |
|------------------|---|-------------------|------------|------------------|---|------------------|---------------|
| <i>habilidad</i> | > | <i>abillidate</i> | 'skill' | <i>capitán</i> | > | <i>kapittan</i> | 'captain' |
| <i>aspirina</i> | > | <i>aspiríña</i> | 'aspirin' | <i>minero</i> | > | <i>miñero</i> | 'miner' |
| <i>esquina</i> | > | <i>eskíña</i> | 'to shoot' | <i>oficina</i> | > | <i>ofísíña</i> | 'office' |
| <i>bilera</i> | > | <i>illara</i> | 'line' | <i>domina</i> | > | <i>domiña</i> | 'to dominate' |
| <i>kilo</i> | > | <i>killo</i> | 'kilo' | <i>gabardina</i> | > | <i>gabardiña</i> | 'rain coat' |

(13) Some of these words admit two pronunciations, with or without palatalization; e.g.: *millágro* ~ *milágro*, *motxilla* ~ *motxila*.

<i>máquina</i>	>	<i>makīna</i>	'machine'	<i>gasolina</i>	>	<i>gasolīna</i>	'gasoline'
<i>milagro</i>	>	<i>millágro</i>	'miracle'				

There are no exceptions to Palatalization among words ending in a palatalizable sequence. All borrowings with such an ending unexceptionally undergo palatalization (uninflected and abs sg forms are given. Cf. Hualde & Bilbao 1992: 24 for Getxo, where the same situation obtains):

(40) Spanish

<i>hábil</i>	>	<i>abill, abilla</i>	'skillful'
<i>fusil</i>	>	<i>fusill, fusilla</i>	'rifle'
<i>Guardia Civil</i>	>	<i>gūardasóbill, gūardasobilla</i>	'Civil Guard'
<i>alguacil</i>	>	<i>agūasill, agūasilla</i>	'municipal policeman'
<i>calcetín</i>	>	<i>kaltzetiñ, kaltzetiña</i>	'sock'
<i>automóvil</i>	>	<i>automóbill, automobiliña</i>	'car'
<i>latín</i>	>	<i>latiñ, latiña</i>	'Latin'

Palatalization is strictly restricted to the word domain. It applies within roots, as in the examples in (33) or (39) above, and across an inflectional or derivational morphological boundary, as in the examples in (41):

- (41) /mendi-tik*/ *mendítik* 'from the mountain', cf. *basótik* 'from the forest'
 /baserri*-tar*/ *baserrittar* 'farmer', cf. *kanpótar* 'outsider'
 /bi-na/ *biña* 'to by two', cf. *bana* 'one by one'

On the other hand, palatalization generally does not apply when there is a word boundary between trigger and target, including compounds:

- (42) *ixerdi-lárrí* *[ʃ] 'cold sweat'
 ixerdi-líkiñ *[ʃ] 'sticky sweat'
 begi-lusía *[ʃ] 'the long-eyed one'
 mendi lusia *[ʃ] 'the long mountain'
 amábi neska *[ɲ] 'twelve girls'

Nevertheless, there are some contexts in which certain word-initial palatalizable consonants do undergo palatalization. First of all, /d/-initial forms of the copula/intransitive auxiliary and the transitive auxiliary are (optionally) palatalized when preceded by a palatalized sonorant, as shown in (43a). These conjugated verbal forms thus behave like phonological clitics. Other /d/-initial conjugated verbs, participles, adjectives, etc, do not palatalize, (43b):

- (43) a. /martin da/ [mártinʃa] 'it is Martin'
 /bardin da/ [bařdinʃa] 'it is the same'
 /il da/ [iʎa] 's/he has died'
 /ein dau/ [einʃaw] 's/he has done it'

- b. *Marti[nd]oya* ‘Martin is going’
Marti[nd]ator ‘Martin is coming’
Marti[nd]otoria da ‘Martin is elegant’

The conjunction /e/ta/ also behaves as a phonological clitic and undergoes palatalization triggered by an immediately preceding high vocoid or palatalized sonorant:

- (44) /bi ta iru/ [bicajru] ‘two and three’

In participle-auxiliary groups initial /n/ optionally palatalizes after [n] (both nasals being fused in a single segment), (45a); but not after [i] or [ʌ], (45b). Outside of this syntactic context, /n/-initial words do not undergo palatalization, (45c) (the forms to the right of the arrow correspond to rapid speech pronunciations):

- (45) a. *žakiñ neban* → *žaki[n]eban* ‘I knew’
 b. *ill neban* → *i[l]eban* *[ʌl] ‘I killed’
ekarri neban → *ekarri [n]eban* *[n] ‘I brought’
 c. *lagunákiñ nator* → *lagunáki[n]ator* *[n] ‘I come with my friends’
aiñ negar asko → *ai[n]egar asko* *[n] ‘so much crying’

On the other hand, in the same syntactic context, /l/-initial auxiliaries optionally undergo palatalization after [ʌ], [n] or (for some speakers) [i]:

- (46) a. *ill leikiu* -> *i[ʌ]leikiu* ~ ‘it can kill us’
i[l]leikiu
eiñ léike -> *ei[ʌ]éike* ~ ‘s/he can do it’
ei[n]léike
etorri léike -> *etorri [ʌ]éike* ~ ‘s/he can come’
etorri [l]éike
 b. *eiñ lasai* -> *ei[n]lasai* *[nʌ] ‘do it calmly’

2.5.3. Interaction between palatalization and nasal and lateral assimilation

So far, we have considered only the case when the target of palatalization is followed by a vocoid or by pause. When /n/ or /l/ is preceded by a front high vocoid and followed by a consonant, it is found in the context for both palatalization and nasal and lateral assimilation. There is thus a conflict between these two processes in this case. The conflict is solved in favor of nasal and lateral assimilation. Nasals take the point of the following consonant even when the nasal is also in the context of the Palatalization rule, as the following examples show:

- (47) a. *ai[n]ka* ‘leg’ b. *array[n]* ‘fish’
ai[n]geru ‘angel’ *array[n]a* ‘the fish’
ai[m]bête ‘so much’ *array[m]politxa* ‘the pretty fish’
i[n]gúru ‘surroundings’ *array[m]barriža* ‘the new fish’
i[m]pernu ‘hell’ *array[n]tontúa* ‘the stupid fish’
i[m]porta ‘to be important’ *array[n]gorriža* ‘the red fish’

As for the lateral, what we find is that palatalization is blocked in preconsonantal position whether or not the following consonant is one whose point of articulation a lateral can take:

(48)	a.	<i>gi[ɿ]tz</i>	'key'	b.	<i>muti[ʎ]</i>	'boy'
		<i>umi[ʎ]de</i>	'humble'		<i>muti[ʎ]a</i>	'the boy'
		<i>B[ʎ]bo</i>	'Bilbao'		<i>muti[ʎ] tontúa</i>	'the stupid boy'
		<i>i[ʎ]go</i>	's/he will die'		<i>muti[ʎ] potolúa</i>	'the fat boy'
					<i>muti[ʎ] gorriža</i>	'the red boy'

Word-internally the realizations are obligatorily as given in (47) and (48) (e.g. **B[ʎ]bo* is not found). Across word-boundaries, the realizations given are the most common ones, although, less commonly, the palatal character of a final lateral or nasal may be preserved. Nasal and lateral assimilation is thus a stronger process or constraint than palatalization.

From the fact that palatalization fails to apply even in those cases where a lateral does not assimilate to a following consonant (before a labial or velar), it can be concluded that a lateral (or a nasal) in a coda does not 'license' a point of articulation (cf. Goldsmith 1990). It will receive its point of articulation from a consonant immediately to its right. Failing this (because there is no following consonant or because the consonant is one of those whose point of articulation a lateral cannot take (a labial or a velar), these segments will receive a 'default' coronal specification. Then, they may undergo palatalization if they are in the context for this rule and if the application of the palatalization rule will not produce a sequence with two different points of articulation.¹⁴

In word-internal (and clitic-group) domains, when the consonant following the sequence /in/ or /il/ is itself a possible target of palatalization (/t/ or /d/), both palatalization and nasal and lateral assimilation can be simultaneously satisfied. This is what happens in examples such as *i[nʃ]ar* 'strength', /il-ten*/ *i[ʎen]* 'die, imperf.', /ein dau/ *ei[nʃ]au* 's/he has done it', *Marti[nʃ]a* 'it is Martin', etc. In this case, since the consonant following the first palatalizable one is also a possible target of palatalization, both requirements on /n/ or /l/ of becoming palatal after /i/ (palatalization) and sharing the point of articulation of a following consonant (nasal and lateral assimilation) can be and are satisfied. In examples such as *Marti[nd]ala* 'that it is Martin', on the other hand, /d/ cannot be palatalized because palatalization is restricted to the word domain and *dala* is not a possible clitic. Consequently, only the stronger constraint is satisfied and the nasal is realized as dental if no prosodic break intervenes.

2.5.4. Palatalization of /s/

The coronal fricative /s/ is also palatalized after a high front vocoid. The examples in (49a) show palatalization in native Basque words that contain a coronal sibilant in other dialects. The examples in (49b) show palatalization in borrowings from Spanish:

(14) The phonotactics of Lekeitio Basque dictate that a preconsonantal coda consonant must either share the point of articulation of the following consonant or have a coronal (i.e. dental or alveolar) point of articulation.

- (49) a. *goix* 'early', *goixa* 'the morning', *ixarra* 'the star', *bixar* 'beard', *ixen* 'name', *ixan* 'to be', *ixerdi* 'sweat', *gixon* 'man', *bixi* 'to live'.

b. Spanish

<i>peso</i>	>	<i>pixo</i>	'weight'
<i>piso</i>	>	<i>pixo</i>	'apartment'
<i>aviso</i>	>	<i>abíxo</i>	'call'
<i>tiza</i>	>	<i>tíxa</i>	'chalk'
<i>pizarra</i>	>	<i>pixárra</i>	'blackboard'
<i>liso</i>	>	<i>líxo</i>	'flat'
<i>paisa</i>	>	<i>páixa</i>	'Moroccan travelling salesman'
<i>pulveriza-</i>	>	<i>pulberixa</i>	'to powder'
<i>tenis</i>	>	<i>ténix</i>	'tennis'
<i>anis</i>	>	<i>anix</i>	'anissette'

/s/ does not palatalize when it is followed by a consonant:

- (50) *bistia* 'the sight' (Sp. *vista*), *pistia* 'the path' (Sp. *pista*), *aistia* 'the sister of a woman', *biskor* 'swift', *istar* 'leg', *máistra* 'female teacher', *liska* 'glue', *triska* 'to destroy', *Biskáiza* 'Biscay'.

The palatalization of /s/ presents more lexical exceptions than that of other palatalizing consonants. A large number of exceptions present a sequence where /s/ is both preceded and followed by /l/, as in the examples in (51a), among many others. Aside from these, there are a few other exceptions, both among borrowings and in the native vocabulary, (51b):

- (51) a. *bisi* 'life', *bisítta* 'visit', *bisízo* 'vice', *desisiño* 'decision', *disipúlu* 'disciple', *indisiño* 'injection', *justísi* 'justice', *malísí* 'malice', *notísí* 'news', *ofisižo* 'job', *pistña* 'swimming pool', *sakrifišízo* 'sacrifice', *eisian* 'hunting'.
 b. *miséri* 'misery', *paisáje* 'landscape', *isotz* 'ice', *prisa* 'hurry'.

Across morpheme boundaries, /s/ palatalizes in verbal forms with the suffix /su/, as in /d-a-ki-su/ *dakixu* 'you-sg know', /d-a-ki-su-e*/ *dakixué* 'you-pl know'. There is no palatalization of /s/ across a compound boundary:

- (52) *mendigoisále* 'mountaineer' *argisári* 'wax'

From its geographical distribution, /s/-palatalization appears to be a different process from the palatalization of noncontinuant coronals. The palatalization of /l/ and /n/ is found in a large area from Navarre (e.g. Baztan) to northwestern Biscay (e.g. Getxo). The palatalization of /t/ is found in a smaller area and that of /d/ (after nasal or lateral) occupies an even smaller area, being restricted to eastern and central Biscayan. Everywhere where /t/ palatalizes, /l/ and /n/ also palatalize.¹⁵ On the other hand, the palatalization of /s/ is found exclusively in the Biscayan dialect including an area of southwestern Biscay where /n/ and /t/ do not palatalize.¹⁶

(15) Other implications are that if syllabic /i/ triggers palatalization, nonsyllabic [j] does too, and that if a segment palatalizes in a coda it also palatalizes in an onset (cf. Hualde 1991: 121).

(16) In Zeberio (southwestern Biscayan), /s/ palatalizes after /i/ as in *gixon* 'man', but /l/ does not, e.g. *mutile* 'the boy' (cf. Etxebarria Ayesta 1991).

2.5.5. Neutralization of rhotics

Underlyingly, there is an opposition between morpheme-final /r/ and /ř/, although those morphemes which have final /r/ are few. As was indicated in section 2.2.6, the flap /r/ can occur only in word-internal intervocalic position on the surface. A consequence of this restriction is that morpheme-final /r/ will be realized as [r] only if followed by a vowel-initial morpheme within the word (i.e. when followed by a vowel-initial suffix). Otherwise, it becomes [ř], neutralizing the distinction between the two rhotics:

(53)	/plater/	<i>plate[r]a</i>	<i>plate[ř]</i>	<i>plate[ř] aundiža</i>
	'dish'	'the dish'	'dish'	'the big dish'
	/ur/	<i>u[r]a</i>	<i>u[ř]</i>	<i>u[ř] asko, u[ř] pillúa</i>
	'water'	'the water'	'water'	'much water' 'a lot of water'
	/tʃakur/	<i>txaku[r]a</i>	<i>txaku[ř]</i>	<i>txaku[ř] aundiža</i>
	'dog'	'the dog'	'dog'	'the big dog'

As shown in the examples, the underlying flap of words such as /plater/ and /ur/ appears only before a vowel-initial suffix, as in [platera], [ura]. There is thus a rule that turns the flap /r/ into the trill [ř] in a syllable rime. This rule applies before the resyllabification of CV sequences across word boundaries.

2.5.6. Deletion and reduction of preconsonantal stops

Oral stops are usually deleted before another consonant, both in morphological and in syntactic concatenation:¹⁷

(54)	/kp/	<i>gixónak potolúak (dira)</i>	[p]	'the men are fat'
		<i>nok pintta rau</i>	[p]	'who painted it'
	/kt/	<i>gixónak tontúuk (dira)</i>	[t]	'the men are stupid'
	/kk/	<i>umšík kakatížak (dira)</i>	[k]	'the children are poopy'
	/km/	<i>suk momia</i>	[m]	'you (erg) the shark'
	/kn/	<i>súek néskak (sarie)</i>	[n]	'you-pl are girls'
	/kl/	<i>nok lagundu (dotzu)</i>	[l]	'who has helped you'
	/kf/	<i>lagúnak feúuk (dira)</i>	[f]	'the friends are ugly'
	/ks/	<i>nik sokia (daukat)</i>	[s]	'I have the rope'
	/kx/	<i>gixónak jenižodúnak (dira)</i>	[x]	'the men are grumpy'
	/kř/	<i>Jonek rradižúa (dauko)</i>	[ř]	'Jon has the radio'
	/stp/	<i>bost patáta</i>	[sp]	'five potatoes'
	/tp/	<i>sémat paper</i>	[p]	'how much paper'
	/tt/	<i>sémat tóntu</i>	[t]	'how many idiots'
	/tk/	<i>sémat ke</i>	[k]	'how much smoke'
	/tm/	<i>sémat morro</i>	[m]	'how many guys'

(17) As mentioned in section 2.1.1, the only word-final stops are /k/ and /t/. Morpheme-internally syllable-final stops are found only in a few borrowings in careful pronunciation.

/tn/ <i>sémat_neska</i>	[n]	'how many girls'
<i>es_tot_nai</i>	[n]	'I don't want'
/tl/ <i>sémat_lagun</i>	[l]	'how many friends'
/tʎ/ <i>sémat_llabero</i>	[ʎ]	'how many key-chains'
/tʃ/ <i>sémat_rradizo</i>	[r]	'how many radios'
/tx/ <i>sémat_jeneral</i>	[x]	'how many generals'

The deletion of stops before other consonants is not an obligatory process in syntactic concatenation, but it is very common. Occasionally, stops may be reduced to a glottal articulation in the preconsonantal context:

- (55) *bat_sartu da* [?] 'one got in'
badaukat_sokia [?] 'I have the rope'
gixónak_dotoríak (dira) [?] 'the men are elegant'

2.5.7. Devoicing of stops

As just shown in the previous section, in sequences of two stops, the first stop (necessarily voiceless) is frequently deleted. A second change in sequences of two stops is that if the second stop is /b/ or /d/ it may be optionally devoiced. The velar stop /g/ is not devoiced in this context:

- (56) *gixónak dira* -> *gixóna[t]ira* 'they are men'
nok dáukos -> *no[t]áukos* 'who has them'
gixónak badira -> *gixóna[p]adira* 'if they are men'
Jonek ba(d)aki -> *Jone[p]aaki* 'Jon knows'
gixónak be -> *gixóna[p]e* 'the men too'
sémat dátos -> *séma[t]átos* 'how many are coming'
 but : *gixónak gara* -> **gixóna[k]ara* 'we are men'
sémat góyas -> **séma[k]óyas* 'how many of us are going'

Devoicing of the velar /g/ takes place, nevertheless, in postpositional phrases, as in (57a), as well as in cases of morphological concatenation, where it can be considered a purely historical change, as in (57b):

- (57) a. *gixónak gáittik* -> *gixóna[k]áittik* 'because of the men'
 b. */bat-garr*-ik/ bakárrik* 'only'

This application of the rule of devoicing in syntactic contexts is severely limited. Besides clitics and postpositions, the process only affects conjugated verbal forms. Other items do not undergo the rule. In the following examples, for instance, the word initial voiced obstruent cannot be realized as a voiceless stop:

- (58) *bat_Benitontzako* *[p] 'one for Benito'
sémat_hárku *[p] 'how many boats'
etxíik_barižak (dira) *[p] 'the houses are new'
bat_Damasontzako *[t] 'one for Dámaso'

<i>sémat dólar</i>	*[t]	'how many dollars'
<i>ba(d)aukat dirua</i>	*[t]	'I have the money'

2.5.8. Fricativization of preconsonantal affricates

Preconsonantal affricates are reduced to fricatives in morpheme concatenation and, optionally, across word boundaries:

- (59) /aberats-tu/ *aberastu* 'to became rich' (cf. *aberatz* 'rich')
 /sorrots-tu/ *sorrostu* 'to sharpen' (cf. *sorrotz* 'sharp')
 /mats-pasa*/ *maspása* 'raisin' (cf. *matz* 'grape')

In syntactic concatenation this simplification is very frequent before a coronal stop, but only optional before other consonants. The fricative element of the affricate may, in addition, assimilate in voice to a following voiced consonant (cf. section 2.5.12):

- (60) *matz totolúa* [st] 'fat grape'
 aberatz tontúa [st] 'stupid rich person'
 matz politta [tsp] ~ [sp] 'the pretty grape'
 ikatz baltza [tsβ] ~ [zβ] 'the black coal'
 bartz pillúa [trsp] ~ [rsp] 'a lot of lice eggs'
 bartz totolúa [trtst] ~ [rst] 'the fat lice egg'
 aberatz dotoria [zð] 'the elegant rich person'
 aberatz txotxolúa [stʃ] 'the silly rich person'
 gatz dago [ʒð] 'it is difficult'

As mentioned, this simplification is more likely to occur before a coronal than before consonants with other points of articulation.

2.5.9. Degemination

A sequence of two identical consonants is reduced to one:

- (61) *asal lusia* [l] 'the long skin'
 lagun noblia [n] 'the noble friend'
 marras santarra [s] 'the dirty rag'
 txakur rraria [r] 'the strange dog'

The sequence /ts+s/ is reduced to an affricate of normal duration:

- (62) *matz santarra* [ts] 'the dirty grape'

2.5.10. Spirantization and related processes

The nonstrident voiced obstruents present basically the same allophonic realizations as in Spanish (and other Basque dialects); that is, they are realized as stops after

a nasal, after /l/ in the case of /d/ and after pause, and as fricatives (or approximants) in other contexts. There are, nevertheless, certain peculiarities with respect to the Castilian Spanish pattern. In addition, Lekeitio Basque possesses a voiced prepalatal strident obstruent which also participates in the alternation between a continuant (fricative) and a noncontinuant (affricate) allophones.

The context where the greatest degree of weakening is found is the intervocalic context. In intervocalic position, /b/ is realized as a bilabial fricative [β]; /d/ can be realized as a dental fricative [ð], as a rhotic flap [r] or be deleted, and /g/ is realized as a velar fricative [ɣ] and it is also frequently deleted:

(63)	<i>a[β]eratza</i>	'rich'
	<i>neskia [β]adator</i>	'the girl is coming'
	<i>aba[ð]e ~ aba[r]e</i>	'priest'
	<i>Euskā[ð]i ~ Euskā[r]i</i>	'Basque Country'
	<i>ikusi [ð]au ~ ikusi [r]au</i>	's/he saw it'
	<i>ume[ð]una ~ ume[r]una</i>	's.o. who has children'
	<i>esne[ð ~ r]una</i>	'the milk man'
	<i>etorri [ð ~ r]a</i>	'has come'
	<i>laguna [ð ~ r]ator</i>	'the friend is coming'
	<i>lei[ð]u ~ lei[r]u</i>	'to read'
	<i>a[ð]arra ~ aarra</i>	'the branch'
	<i>e[ð]erra ~ eerra</i>	'beautiful'
	<i>la[ɣ]una ~ launa</i>	'the friend'
	<i>a[ɣ]iña ~ aiña</i>	'the tooth'
	<i>e[ɣ]una ~ euna</i>	'the day'

Whereas the realizations [β], [ð], [ɣ] are always possible in intervocalic position, both the rhotacism of /d/ and the deletion of /d/ and /g/ are more restricted processes.

As shown in the examples above, the rhotacism rule (i.e., the realization of /d/ as [r]) applies in the intramorphemic context, and also affects suffix-initial and clitic-initial /d/, including conjugated verbs, which behave as phonological clitics for the purposes of this and other rules. On the other hand, the rule does not apply in other contexts across word boundaries or even across a compound boundary:

(64)	<i>neska [ð]otoria , *neska [r]otoria</i>	'the elegant girl'
	<i>espata[ð]antzariña , *espata[r]antzariña</i>	'the sword-dancer'

The rhotic allophone of /d/ is identical to the intervocalic realization of the rhotic flap phoneme /r/. There are, thus, words which allow a variation [ð ~ r] (those with underlying /d/), such as *aba[ð]e ~ aba[r]e* 'priest', and words whose only possible realization is with [r] (those with underlying /r/), such as *ba[r]e* 'calm', not **ba[ð]e*. Rhotacism is blocked when the following syllable contains a rhotic in onset position; e.g.: *a[ð]urra* 'the spit', not **a[r]urra*, *a[ð]arra* 'the branch', not **a[r]arra*, *e[ð]erra* 'the beautiful one', not **e[r]erra*, etc.

Intervocalic /g/ is frequently deleted within a morpheme, although more frequently in some words than in others and there are lexical exceptions to the rule.

/g/-initial suffixes (comitative /-gas*/ and postpositions (/ -gaitik*/ 'because of') also lose this consonant very frequently after a vowel. However, there is no deletion after a compound or syntactic word boundary:

- (65) a. morpheme-internally

<i>da[ɣ]o ~ dao</i>	's/he is'
<i>bi[ɣ]óte ~ bióte</i>	'moustache'
<i>arpe[ɣ]i ~ arpe[j]¹⁸</i>	'face'
<i>a[ɣ]ura ~ aura</i>	'old man'

But:

<i>a[ɣ]urtu, ?? aurtu</i>	'to greet'
<i>a[ɣ]ertu, ?? aertu</i>	'to appear'

- b. suffixation and postpositions

<i>aittā[ɣ]as ~ aittás</i>	'with the father'
<i>txakurra [ɣ]áittik ~ txakurra áittik</i>	'because of the dog'

- c. compounds

<i>buru-[ɣ]ógor, *buruógor</i>	'hard-headed, stubborn'
<i>aspiko-[ɣ]óna, *aspikoóna</i>	'pettycoat, slip'
<i>borra-[ɣ]óm̩a, *borraóm̩a</i>	'eraser'

- d. across word-boundaries

<i>ume [ɣ]angarra, *ume angarra</i>	'mischievous child'
<i>mendi [ɣ]orriža, *mend[io]rríža</i>	'the red mountain'

There are relatively few items that allow deletion of an intervocalic /d/. The deletion of /d/ appears, in fact, to be restricted to the case where this consonant is between identical nonhigh vowels. In other cases, it is impossible:

- (66) a. *a[ð]arra ~ aarra*

e[ð]erra ~ eerra

ba[ð]ator ~ baator

- b. *bi[ð]ia ~ bi[r]ia -*biia*

*embu[ð]úa ~ embu[r]úa -*embuúa*

*etorri [ð]a ~ etorri [r]a -*etorr[ia]*

*ume[ð]úna ~ ume[r]una -*umeúna*

'the branch'

'the beautiful one'

's/he is coming'

'the road'

'the funnel'

's/he has come'

's.o. who has children'

The deletion of /d/ in intervocalic position, like that of /g/, is also restricted to the word-internal domain. Across word boundaries, the deletion process does not take place:

- (67) *baso [ð]otoria , *bas[oo]toria* 'the elegant forest'

Following a continuant consonant (a fricative or a rhotic), /b,d,g/ are realized as continuant [β,ð,ɣ]:

(18) High vowels which become postvocalic as a consequence of the deletion of an intervocalic consonant generally glide. An exception is *begi ~ be[i]* 'eye' which remains bisyllabic.

(68)	<i>nóas bajatuko sarié</i>	[zβ]	'who will you-pl come down with'
	<i>lagunágas dator</i>	[zð]	's/he is coming with the friend'
	<i>nóas góyas</i>	[zy]	'who are we going with'
	<i>arbolía</i>	[rβ]	'the tree'
	<i>ardawa</i>	[rð]	'the wine'
	<i>argiža</i>	[ry]	'the light'
	<i>txakur gorriža</i>	[r̩y]	'the red dog'

After a noncontinuant sonorant, the distribution of the allophones is as in standard Spanish. After a nasal, stop realizations of the three phonemes are found. After a lateral, /d/ is realized as a stop and /b/ and /g/ as continuant:

(69)	<i>bombía</i>	[mb]	'the bomb'
	<i>egun barriža</i>	[mb]	'the new day'
	<i>andaria</i>	[nd]	'the speed'
	<i>emón̩go</i>	[ŋg]	'will give'
	<i>albuun</i>	[lβ]	'beside'
	<i>aldia</i>	[ld]	'the side'
	<i>algodoya</i>	[ly]	'the cotton'
	<i>asal gorriža</i>	[ly]	'the red skin'

Following a voiceless stop, /b/ and /d/ can be realized as voiceless stops in certain syntactic environments, as was mentioned in section 2.5.7. If devoicing does not apply, /b,d,g/ may be realized as either continuant or noncontinuant. It appears that what determines one realization or the other is the degree to which the preceding stop is deleted. If the first consonant in a sequence is completely eliminated (which may happen when the two consonants are homorganic), the voiced obstruent may be found in intervocalic position, in which case it will be realized as a continuant segment. On the other hand, if the voiceless stop preceding the voiced obstruent is only reduced and a noncontinuant articulation, which may be purely glottal, remains, the second segment will be realized as noncontinuant as well:

(70)	<i>ba(d)aukat gorriža</i>	[?g]	'I have the red one'
	<i>nok galdu (dau)</i>	[?g] ~ [ɣ]	'who lost it'
	<i>nik gorrižak (daukaras)</i>	[?g] ~ [ɣ]	'I have the red ones'
	<i>umtak dotoriák (dira)</i>	[?d]	'the children are elegant'
	<i>ba(d)aukat berdia</i>	[?b]	'I have the green one'

Finally, at the beginning of an utterance, /b,d,g/ are realized as stops:

(71)	<i>[b]onbia</i>	'the bomb'
	<i>[d]irua</i>	'the money'
	<i>[g]orriža</i>	'the red one'

2.5.11. Allophony of the voiced prepalatal obstruent

The prepalatal strident voiced obstruent /ʒ/ has two distinct allophones, fricative [ʒ] and affricate [dʒ]. These two allophones present the same distribution as the continuant and noncontinuant allophones of the nonstrident voiced obstruents, stu-

died in the preceding section. The affricate is found utterance-initially and after a nasal. The fricative is found elsewhere:

- | | |
|-------------------------|-----------------------------|
| (72) [dʒ]an dau | 's/he has eaten it' |
| [dʒ]un da | 's/he has gone' |
| sémat gixon [dʒ]un díra | 'how many men have gone' |
| [dʒ]on [dʒ]un da | 'Jon has gone' |
| dana [ʒ]an dau | 's/he has eaten everything' |
| Górka [ʒ]un da | 'Gorka has gone' |
| Fidel [ʒ]un da | 'Fidel has gone' |
| Aitor [ʒ]un da | 'Aitor has gone' |
| mon[dʒ]a | 'nun' |
| [dʒ]ur[ʒ]idu | 'to fill up' |

2.5.12. Voicing of fricatives

Syllable-final fricatives assimilate in voice to a following consonant, word-internally and across word boundaries:

- | | |
|------------------------|----------------------------------|
| (73) lagunága[z] dator | 's/he is coming with the friend' |
| a[z]guría | 'the itching' |
| e[z]biárra | 'the accident' |
| goi [ʒ] dator | 's/he is coming early' |
| gri[ʒ] barriża | 'the new grey one' |

The affricates /ts/ and /tʃ/ also undergo voicing in this context, often being respectively realized as the voiced fricatives [z] and [ʒ] in this position (cf. section 2.5.8):

- | | | | |
|-----------------------------|----------------|-----------------------|-------------------|
| (74) gat <u>s</u> barik [z] | 'without salt' | gat <u>x</u> dago [ʒ] | 'it is difficult' |
|-----------------------------|----------------|-----------------------|-------------------|

2.6. Main phonological processes affecting vowels

2.6.1. Mid vowel raising

The mid vowels /e/, /o/ are raised to high immediately preceding another nonhigh vowel. The application of this rule is readily observable in nominal inflection:

- | | | |
|---------------|-----------|----------------------------|
| (75) /etse-a/ | etxia | 'the house, abs' |
| /etse-en*/ | etxién | 'of the houses, gen' |
| /etse-ok*/ | etxiók | 'the houses, abs/erg prox' |
| /au etse-au/ | au etxian | 'this house, abs' |
| /berde-ago*/ | berdiágó | 'greener' |
| /berde-egi*/ | berdiégi | 'too green' |
| /berde-en*-a/ | berdiéna | 'the greenest' |
| /baso-a/ | basua | 'the forest, abs' |
| /basu-en*/ | basúen | 'of the forests, gen' |

/basu-ok*/	<i>basúok</i>	'the forests, abs/erg prox'
/au baso- <i>au</i> /	<i>au basuan</i>	'this forest, abs'
/tonto*-ago*/	<i>tontuágo</i>	'more stupid'
/tonto*-egi*/	<i>tontuégi</i>	'too stupid'
/tonto*-en*-a/	<i>tontuéna</i>	'the stupidest'

Monosyllabic stems ending in a mid vowel /e/ do not undergo mid vowel raising (there are no monosyllables with final /o/). Instead, when followed by a vowel-initial inflectional suffix, they show insertion of a palatal glide:

(76)	uninfl	abs sg
	<i>me</i>	<i>meyə</i> 'thin'
	<i>ke</i>	<i>keya</i> 'smoke'
	<i>te</i>	<i>teya</i> 'tea'

It would be possible to postulate an underlying final glide or long vowel for these words; but that would be to miss the generalization that all monosyllabic stems ending in [e] show this behavior. The reason motivating the special behavior of monosyllables would seem to be the preservation of the quality of their only vowel. An analogous behavior with respect to other rules is found in other Basque dialects. Thus, in Souletin, stem-final *-ii* is unrounded before a vowel in inflectional contexts as in *lékhii* 'place', *lekhía* 'the place, abs sg'. However, monosyllabic stems show insertion of a palatal glide instead: *sii* 'fire', *siyya* 'the fire, abs sg'.

Although mid vowel raising, like other rules affecting vowel sequences that arise in inflectional morphology, is a very conspicuous rule, given the frequency of inflected forms with such sequences, actually the application of the rule is limited to the phonological word domain (i.e. it is a lexical rule). The rule does not apply across words boundaries, (77a), or even in compounds, (77b):

(77) a.	<i>etxe aundiža</i>	->	* <i>etx[i] aundiža</i>	'the big house'
	<i>baso ederra</i>	->	* <i>bas[u] ederra</i>	'the beautiful forest'
b.	<i>asteásken</i>		*[ia]	'Weekend'
	<i>semealábak</i>		*[ia]	'sons and daughters'
	<i>lepoásur</i>		*[ua]	'backbone'
	<i>treotzára</i>		*[io]	'type of basket'

In underived domains there are no true exceptions to the rule within the native vocabulary and comparison with other domains shows that mid vowels have been raised in the relevant context; e.g. *joan* > *žuan* 'to go', *be(b)ar* > *biar* 'need'. Nevertheless, a number of borrowings constitute exceptions to the rule in underived environments. Some examples are the following:

(78)	<i>korréa</i> 'belt', <i>peáje</i> 'toll', <i>errekréo</i> 'recess', <i>féo</i> 'ugly', <i>petroléo</i> 'petrol', <i>tebéo</i> 'comic', <i>preokupa</i> 'to worry', <i>peo</i> 'peon', <i>plateau</i> 'silvered', <i>toálla</i> 'towel'.
------	--

However, other borrowings are changed in conformity with the rule. In particular, Spanish verbs in *-ear* systematically undergo raising of the mid vowel:

(79) Spanish

<i>catea-</i>	>	<i>katia</i>	'to flunk'
<i>mosquea-</i>	>	<i>moskia</i>	'to be suspicious'
<i>pasea-</i>	>	<i>pasia</i>	'to take a walk'
<i>sortea-</i>	>	<i>sortia</i>	'to raffle'
<i>torea-</i>	>	<i>toria</i>	'to fight a bull'

Other examples of adapted borrowings are *antiojúak* 'glasses' < Sp. *anteojos* and *mario* 'dizziness' < Sp. *mareo*.

The deletion of intervocalic voiced obstruents gives rise to surface exceptions to mid vowel raising, as in *egon* ~ *eon* 'to be, stay'. The intensive third person singular pronoun *beori* from /ber-ori/ (and other forms of its paradigm, cf. section 3.1.6), where the first /r/ is not pronounced in Lekeitio also constitutes a surface exception to mid vowel raising.

2.6.2. ž-insertion

The prepalatal voiced fricative /ž/ [ʒ] is inserted between the high front vowel /i/ and another vowel. This is a lexical rule. Its operation in inflectional concatenation is illustrated in the following examples:

(80) /mendi-a/	<i>mendiža</i>	'the mountain, abs'
/mendi-ak*/	<i>mendižak</i>	'the mountains, abs/erg'
/mendi-en/	<i>mendižen</i>	'of the mountain, gen'
/mendi-on*/	<i>mendižon</i>	'of the mountains, gen prox'
/au mendi-au/	<i>au mendižau</i>	'this mountain, abs'
/argi-ago*/	<i>argižago</i>	'clearer'
/argi-egi*/	<i>argižegi</i>	'too clear'
/argi-en*-a/	<i>argižena</i>	'the clearest'

The insertion of [ʒ] only takes place after underlying /i/, not after /e/ or /a/ raised to [i] by mid vowel raising (cf. section 2.6.1) or singular low vowel raising (cf. section 2.7.1).

The extent to which /ž/-insertion affects underived domains (in the synchronic grammar or historically) is not readily apparent, given the fact that [iV] sequences can be taken to represent underlying /eV/ (cf. previous section). Comparative evidence allows us to identify examples such as *bi(h)ar* > *bizar* 'tomorrow' (cf. *be(h)ar* > *biar* 'need'), *arerio* > *arerijo* 'enemy', *bariaku* > *barižaku* 'Friday', *(h)eriotza* > *erižotza* 'death', etc. The process has a high degree of productivity in the adaptation of borrowings ending in -ia or in -io:

(81) Spanish

<i>radio</i>	> <i>rradižo</i>	'radio'
<i>armario</i>	> <i>armarižo</i>	'cabinet, cupboard'
<i>vicario</i>	> <i>bikarížo</i>	'vicar'
<i>vicio</i>	> <i>bisižo</i>	'vice'

<i>vestuario</i>	> <i>bestuarízo</i>	'vestuary, dressing room'
<i>desconfia-</i>	> <i>deskonfiža</i>	'to distrust'
<i>divorcia-</i>	> <i>dibortziža</i>	'to divorce'
<i>divorcio</i>	> <i>dibortzížo</i>	'divorce'
<i>edificio</i>	> <i>edifisížo</i>	'building'
<i>remedio</i>	> <i>erremedížo</i>	'remedy'
<i>ensayo</i>	> <i>entzaižo</i>	'essay, attempt'
<i>espiá-</i>	> <i>espiža</i>	'to espy'
<i>estudia-</i>	> <i>estudiža</i>	'to study'
<i>estudio</i>	> <i>estudížo</i>	'study'
<i>cambio</i>	> <i>kambižo</i>	'change'
<i>confia-</i>	> <i>konfiža</i>	'to trust'
<i>confesonario</i>	> <i>konfesonarížo</i>	'confessional box'
<i>novio</i>	> <i>nobížo</i>	'boyfriend'

Aside from loanwords presenting this context, which includes a large number of items, ž-insertion does not have any productivity in the adaptation of borrowings. Very few borrowings present ž-insertion in an environment other than final *-ia*, *-io*. Some examples showing this adaptation are given in (82a).¹⁹ Examples such as those in (82b) not presenting this adaptation are by far more numerous:

- (82) a. *confianza* > *konfižántza* 'confidence'
criada > *križada* 'maid, female servant'
criado > *križau* 'male servant'
merienda > *merižénda* 'afternoon snack'
 b. *curioso* > *kurčoso* 'curious'
gobierno > *gobčerno* 'government'
persiana > *perslánna* 'Venetian blinds'
sentimiento > *sentiměnto* 'feeling'
nerviosa > *nerbiosa* 'nervous, fem'
negociante > *negoslánte* 'businessman'
obediente > *obeděnté* 'obedient'

The rule does not apply across word boundaries (83a) or in compounds (83b):

- (83) a. *mendi aundi bat* -> **mendi[3]aundi bat* 'a big mountain'
 b. *ontzi-árotz* *[i3a] 'ship carpenter'
žai-egun *[aj3e] 'holiday'
segi-áldi *[i3a] 'persecution'

Across a derivational morpheme boundary, there is ž-insertion in /lodi-era/ *lodijé-ra* 'fatness', but the process does not seem to be productive in this morphological context; e.g. /donosti-ař*/ *donostíar* 'Donostian (from Donostia-San Sebastián)', not **donostížar*. The adjectival affixes /-ago*/ 'more', /-egi*/ 'too' and /-en*/ 'most',

(19) It is not easy to determine the age of the borrowings in (82a). Other borrowed words with this adaptation which have the aspect of being quite old in Lekeitio Basque are *orižo* 'oil', *kažóla* 'cage' and *erréžo* 'river'.

which in Basque can be considered inflectional in spite of their function, regularly trigger ž-insertion, as shown above in (80). However, there is no insertion in the adverbs *gitxiénes* 'at least' and *gitxiágo* 'less' formed from *gitxi* 'little'.

The deletion of intervocalic /g/ creates apparent exceptions to ž-insertion in an inflectional context in comitative forms containing the suffix /gas*/; e.g.: *orrasígas* ~ *orrasías* 'with comb, com indef.'

2.6.3. Total assimilation of vowels

In certain morpho-syntactic contexts, /a/ and /e/ assimilate in all features to an immediately preceding vowel.²⁰ Unlike the two rules just examined (mid vowel raising and ž-insertion), this total assimilation process is an optional, fast-speech, rule:

- | | |
|--|-------------------------|
| (84) <i>umia da</i> ~ <i>umii da</i> | 'it is the child' |
| <i>basúak dis</i> ~ <i>basúuk dis</i> [basúutis] | 'they are the forests' |
| <i>umien ama</i> ~ <i>umiin ama</i> | 'the child's mother' |
| <i>umien ama</i> ~ <i>umiín ama</i> | 'the children's mother' |
| <i>katuen platera</i> ~ <i>katuun platera</i> | 'the cat's plate' |
| <i>žo ében</i> ~ <i>žo óben</i> | 'they hit him/her' |
| <i>apurtu eban</i> ~ <i>apurtu uban</i> | 's/he broke it' |
| <i>ikusi ében</i> ~ <i>ikusi íben</i> | 'they saw it' |

The pronunciations to the right of the arrow show the application of this process of total assimilation which, as mentioned, is only optional but very common in casual conversation.

The vowel /o/ does not undergo this process :

- | | |
|--|---------------------------------------|
| (85) <i>basúok dis</i> - * <i>basúuk dis</i> | 'they are the forests, prox(imative)' |
| <i>umión ama</i> - * <i>umiín ama</i> | 'the children's mother, prox' |

As for the high vowels, they are never found in the relevant morphological contexts. The application of total vowel assimilation is restricted to basically two contexts: between stem and nominal inflection and between main verb and auxiliary (those illustrated above in (84)). Outside of these two morphosyntactic contexts, total vowel assimilation applies only with the superlative suffix /-en*/. This is a rather curious exception, since other suffixes of a similar semantic and morphological nature, such as the comparative /-ago*/ and the excessive /-egi*/, do not undergo the rule:

- | | |
|---|-----------------------|
| (86) / <i>tonto*-en*-a/ tontuéna</i> ~ <i>tontuúna</i> | 'the most stupid one' |
| / <i>tonto*-ago*-a/ tontuáwa</i> - * <i>tontuúwa</i> | 'more stupid' |
| / <i>tonto*-egi*-a/ tontuegíža</i> - * <i>tontuugíža</i> | 'too stupid' |

As was noted in sections 2.6.1 and 2.6.2 all three suffixes illustrated in (86) undergo both mid vowel raising and ž-insertion, just like nominal inflectional suffixes. The difference between the superlative and the other two adjectival suffixes is, thus, rather unexpected.

(20) Hualde & Elordieta (1992) is an expanded version of this section, where some theoretical issues raised by the process of total vowel assimilation are discussed. Cf., also, Elordieta (1994).

Elsewhere the rule does not apply:

(87)	Morpheme-internally ²¹ :	<i>diabru</i> -	* <i>diibru</i>	'devil'
	Derivation:	<i>listu-égi</i> -	* <i>listuúgi</i>	'too smart'
		<i>donosti-árra</i> -	* <i>donostíirra</i>	'Donostian'
	Compounding:	<i>buru-ándi</i> -	* <i>buruúndi</i>	'big-headed'
	Between words:	<i>ortu estua</i> -	* <i>ortu ustua</i>	'narrow field'
		<i>ori argiža</i> -	* <i>ori irgiža</i>	'that light'

Total vowel assimilation is, thus, a process that only affects nominal inflectional suffixes and auxiliaries. The exceptionality of the superlative suffix can be related to the fact that this morpheme is phonologically identical to the genitive plural. In fact, it can be taken to be the same morpheme.

A further restriction on this process is that it does not apply when the target syllable immediately precedes a pause or strong intonational break:

(88)	<i>Pér̥u gure umia ra</i> ~ <i>Pér̥u gure umii ra</i>	'Peru is our child'
but:	<i>Pér̥u ra gure umia</i> - * <i>Pér̥u ra gure umii</i> #	
	<i>liburiúak Pér̥uk daukos</i> ~ <i>liburiúuk Pér̥uk daukos</i>	'Peru has the books'
but:	<i>Pér̥uk daukos liburiúak</i> - * <i>Pér̥uk daukos liburiúuk##</i>	
	<i>barrixtu egingo dabela [plasan dagoen etxial/ *etxii] esan ében</i>	'they said that they would renovate [the house that is on the square]'

This is, thus, a morphologically restricted rule which is sensitive to intonational breaks. On the other hand, total vowel assimilation between participle and auxiliary is not dependent on cliticization; since it may take place even when participle and auxiliary constitute separate prosodic words, as when the participle receives focus accent or the auxiliary carries a complementizer (cf. sections 2.8.4 and 5.1):

(89)	<i>ekarrí eban</i> ~ <i>ekarrí iban</i>	's/he did bring it'
	<i>ekarrí ebalako</i> ~ <i>ekarrí ibalako</i>	'because s/he brought it'
	<i>ekarríko eban</i> ~ <i>ekarríko oban</i>	's/he would bring it'

Total vowel assimilation applies on the output of the obligatory rules of mid vowel rising (cf. section 2.6.2) and singular low vowel raising (cf. section 2.7.1):

(90)	/ <i>baso-a/ basua</i> ~ <i>basuu (da)</i>	'(it is) the forest'
	/ <i>baso-en/ basuen</i> ~ <i>basuun (žawia)</i>	'(the owner) of the forest'
	/ <i>ume-a/ umia</i> ~ <i>umii (da)</i>	'(it is) the child'
	/ <i>ume-en/ umien</i> ~ <i>umiin (ama)</i>	'(the mother) of the child'
	/ <i>neska-a/ neskia</i> ~ <i>neskii (da)</i>	'(it is) the girl'
	/ <i>neska-en/ neskien</i> ~ <i>neskiin (ama)</i>	'(the mother) of the girl'

Total vowel assimilation can also be fed by a rule that deletes the final /-n/ of perfective participles in certain intervocalic contexts (cf. section 2.7.4):

(91)	<i>žan eban</i> ~ <i>ža eban</i> ~ <i>ža aban</i>	's/he ate it'
------	---	---------------

(21) Tautomorphemic sequences are affected only in a few words, such as the semiauxiliary *biar* ~ *bi(i)r* 'must',

2.6.4. Postvocalic glide formation

In sequences of two vocoids where one of them is high, the relative position of the two vocoids determines their syllabification. Whereas prevocalic high vocoids are syllabic (except in some borrowings, as was mentioned in section 2.2.7), postvocalic high vocoids are realized as glides. Thus, *ausua* 'the neighbor' is syllabified as [aw.su.a], where the sequence *au* forms a diphthong, but the opposite sequence *ua* is pronounced in hiatus. The distinction between diphthongs and hiatuses is relevant for accentuation purposes. In Lekeitio, lexical accents are always realized on the penultimate syllable of the word (cf. section 2.8.1). Given this restriction on the position of accents, consider the accentual patterns of lexically accented words such as *éurak* 'they, abs/erg' and *suéri* 'to you-pl, dat'. In both cases, the accent must be on the penultimate syllable, but in *suéri* [su.é.ri] it falls on the penultimate vocoid and in *éurak* [éw.rak] on the antepenultimate. This shows that accent placement is sensitive to syllabification and, in particular, to the derived syllabic distinction between prevocalic and postvocalic high vocoids.

The rule of diphthongization or postvocalic glide formation, thus, makes a high vocoid nonsyllabic when immediately following a segment of higher sonority.²²

- (92) Postvocalic glide formation: A high vocoid becomes nonsyllabic (i.e. loses its moraic character) when immediately preceding a nonhigh vocoid

m	m	m
V	V	V
[-high]	[+high]	[-high]

->

V	V
[-high]	[+high]

(where, m = mora)

Postvocalic glide formation applies both word-internally (e.g.: [lau] → *law* 'four') and across word boundaries (e.g.: *neska umilde bat* → *nes.kaw.mil.de bat* 'a humble girl'). Nevertheless, the rule of postvocalic glide formation does not apply in sequences that have been created by deletion of an intervocalic consonant. Thus the auxiliary form, *dou* from /dogu/ is bisyllabic, as shown by the position of the accent in an example such as (*gûk*) *eitten-dóu* 'we make it' which can be compared with (*lagunâk*) *eittén-dau* 'the friend makes it'.

Intervocalic high vocoids both precede and follow a vowel. Thus, they would seem to be both in the context where these segments are realized as vowels and in the context where they are realized as glides. The fact is that, in morpheme internal position, intervocalic high vocoids are syllabified as onsets and are realized as fricativized glides; e.g. *žawe* /ʒaue/ [dʒa.ŵe] 'owner'. Intervocalic high vocoids thus behave

but not, e.g. : *siar* ~ **siir* 'through'. In particular, participles in *-ia* can undergo the rule, e.g.: *sortia* ~ *sortii* 'to raffle' (cf. Elordieta 1994).

(22) Sequences of two high vowels are generally heterosyllabic: /piura/ [pi.u.ra] 'aspect, figure', /pasiu*/ [pa.sí.u] 'stroll'.

as postvocalic ones in undergoing glide formation (and subsequent fortition). Consider now, however, the following contrasts:

(93)	<i>desi.ú.ak</i>	'desires'	<i>mo.rá.uak</i>	'purple ones'
	<i>pasi.ú.ak</i>	'strolls'	<i>lá.uak</i>	'the four'
	<i>fe.ú.ak</i>	'ugly ones'	<i>sé.uek</i>	'you-pl, emph.'
	<i>e.rre.kre.ú.ak</i>	'recesses'	<i>ar.dá.uak</i>	'the wines'

In the words on the left column, the accent falls on the intervocalic vocoid, which is syllabic. In those on the right, on the other hand, the intervocalic high vocoid is nonsyllabic and the accent falls on the third vocoid from the right.

A difference between the words on the right and the left column in (93) appears once we consider their uninflected forms:

(94)	<i>desío</i>	<i>moraú</i>
	<i>pasíu</i>	<i>lau</i>
	<i>feó</i>	<i>seu</i>
	<i>errekréo</i>	<i>ardau</i>

The left-column words are accented words ending in a hiatus. The right-column words on the other hand end in a postvocalic glide. Postvocalic Glide Formation (PGF) does not apply in the left-column examples because either the last segment is not underlyingly high or, if high, it is preceded by another high vocoid:

(95)	<i>pasiuak</i>	<i>feoak</i>	<i>moraauak</i>	<i>seukek</i>
PGF	<u><i>pa.sí.u.ak</i></u>	<u><i>fe.o.ak</i></u>	<u><i>mo.ra.wak</i></u>	<u><i>se.wek</i></u>
Syllabification	<u><i>pa.sí.u.ak</i></u>	<u><i>fe.u.ak</i></u>	<u><i>mo.ra.wak</i></u>	<u><i>se.wek</i></u>
Mid V Raising	<u><i>pa.sí.ú.ak</i></u>	<u><i>fe.ú.ak</i></u>	<u><i>mo.rá.wak</i></u>	<u><i>se.wek</i></u>
Lexical Stress Ass.	<u><i>pa.sí.ú.ak</i></u>	<u><i>fe.ú.ak</i></u>	<u><i>mo.rá.wak</i></u>	<u><i>se.wek</i></u>

2.6.5. Deletion and gliding of postvocalic mid vowels

Although, with the only exception of *oe* 'bed', the final sequence [Ve] is not found on the surface, there is a group of words for which an underlying stem-final /Ve/ sequence appears to have to be postulated. Consider the contrast between the examples in (96a) and (96b):

(96)	uninflected abs sg			
a.	<i>kata</i>	'chain'	b.	<i>bei</i>
	<i>gasta</i>	'cheese'		<i>mai</i>
	<i>melo</i>	'melon'		<i>dei</i>
	<i>patro</i>	'boss'		<i>gai</i>
	<i>telebisiño</i>	'television'		<i>úrdai</i>
				<i>kai</i>
				<i>nasai</i>
				<i>loi</i>
				<i>beíža</i>
				<i>máiža</i>
				<i>deíža</i>
				<i>gaiža</i>
				<i>urdáiža</i>
				<i>kaiža</i>
				<i>nasaiža</i>
				<i>loiža</i>
				'cow'
				'table'
				'call'
				'topic'
				'bacon'
				'harbor'
				'wide'
				'dirt'

The stems in (96b) do not present any surprises. They clearly appear to end in underlying /i/ and, thus, trigger ž-insertion before a vowel-initial inflectional suffix, like any other /i/-final stems. For the words in (96a), however, a final underlying /e/ can be postulated. This vowel deletes in final position preceded by another vowel (left column). In the intervocalic position, on the other hand, underlying /e/ rises and glides (right column).

This distinction can be captured if, for stems such as those in (96a), we postulate final underlying /e/, which rises and glides in postvocalic position and is deleted word-finally. (cf. Hualde & Bilbao 1992: 34-35, Hualde 1993b for related facts in other dialects):

(97)		/katae/	/katae-a/	/nasai/	/nasai-a/
$\emptyset \rightarrow \check{z}$ /	i _ V	_____	_____	_____	nasaiža
e → j /	V _ V	_____	kataja	_____	_____
e → \emptyset /	V _]	kata	_____	_____	_____
		kata	kataya	nasai	nasaiža

2.7. Restricted morphophonological processes

In this section, we include phonological alternations which only affect a few morphemes or are otherwise restricted to very specific morphological contexts.

2.7.1. Raising and deletion of stem-final low vowels

Stem final /-a/ is raised to [i] before the initial vowel of an inflectional suffix in the singular.²³

(98)	/neska-a/	neskia	'the girl, abs'
	/bab-a/	babia	'the bean, abs'
	/neska-a-k/	neskiak	'the girl, erg'
	/bab-a-k/	babiak	'the bean, erg'
	/neska-en/	neskien	'of the girl, gen'
	/bab-en/	babien	'of the bean, gen'
	/ori neska-ori/	ori neskiori	'that girl, abs'
	/ori baba-ori/	ori babiori	'that bean, abs'

In the plural and indefinite, instead, the same sequences are altered by deletion of the stem-final low vowel:

(99)	/neska-ak*/	néskak	'the girls, abs/erg'
	/bab-ak*/	bábak	'the beans, abs/erg'
	/neska-en*/	néskén	'of the girls, gen'
	/bab-en*/	báben	'of the beans, gen'

(23) This process can be interpreted as raising of /a/ to [e], which is then raised to [i] by mid vowel raising (cf. section 2.6.1).

/neska-on*/	néskon	'of the girls, gen prox'
/baba-on*/	bábon	'of the beans, gen prox'
/neska-en/	nesken	'of girls, gen indef'
/baba-en/	baben	'of beans, gen indef'

The raising of /a/ before another vowel is thus a process restricted to singular inflectional domains.

2.7.2. Processes affecting the negative particle

After the negative particle /es/, inflected verbal formings beginning with /b/ or /d/ undergo optional devoicing, just as after voiceless stops (cf. section 2.5.7). The same asymmetry indicated in section 2.5.7 can be observed also in this context. The velar /g/, which does not devoice after stops, is not devoiced after the negation either:

(100)	/es-dator/	es[t]ator	's/he is not coming'
	/es-dira/	es[t]ira	'they are not'
	/es-ba-doya*/	es[p]adóya	'if s/he is not going'

But:

/es-gara/	*es[k]ara	'we are not'
	e[zy]ara	
/es-goias*/	*es[k]óyas	'we are not going'

e[zy]óyas

Devoicing after /es/ is an optional process. In the examples above /s/ can take the voiced feature of the following consonant instead, as is normal outside of this special morphosyntactic context: e[zð]ator, e[zð]ira, e[zβ]adóya. On the other hand, /s/ does not cause devoicing of a following stop in any other context. Thus, examples such as *es barrízak* 'not the new ones' or *es damutu* 'not to repent', where the negative particle *es* is followed by a word which is not a conjugated verb, devoicing is impossible: *es[p]arrízak, *es[t]amutu. Similarly devoicing does not take place in *lagunágas dator* 's/he is coming with the friend', which contains a conjugated verb form starting with /d/ preceded by an /s/ which does not belong to the negative particle: *lagunágas[t]ator.

A second special rule restricted to groups with negative /es/ is that the final /s/ of the negative particle deletes before inflected verb forms starting with /n/ or /l/. This is also an optional process:

(101)	/es-nabil/	enabill	'I am not walking'
	/es-leuko/	eleuko	's/he would not have it'

2.7.3. Voicing of stops after noncontinuant sonorants

In some restricted morphological contexts, a stop is voiced after a nasal or lateral (a noncontinuant sonorant). One of the contexts where this rule operates is the morphology of uninflected verb forms. The initial consonant of both the future

suffix /-ko*/ and the suffix /-ta/ of the participial adjective undergo voicing after a nasal or lateral. Compare the following examples:²⁴

(102)	future	adjectival participle
a.	<i>etorrí-ko</i>	<i>etorrí-tta</i> ‘to come’
	<i>banatú-ko</i>	<i>banatú-ta</i> ‘to distribute’
b.	<i>éin-go</i>	<i>éin-dda</i> ‘to do, make’
	<i>emón-go</i>	<i>emón-da</i> ‘to give’
	<i>esán-go</i>	<i>esán-da</i> ‘to say’
	<i>il-go</i>	<i>il-dda</i> ‘to die’

One of the endings of the perfect participle is /-tu/ (cf. section 3.2.1). This suffix, which is productive in the formation of verbs from adjectives and nouns, also undergoes the rule of voicing:

(103) a.	<i>luse-tu</i>	‘to lengthen’
	<i>erres-tu</i>	‘to make easy’
	<i>labur-tu</i>	‘to shorten’
b.	<i>epel-du</i>	‘to warm up’
	<i>gixon-du</i>	‘to become a man’
	<i>ixil-ddu</i>	‘to become/make quiet’
	<i>lagun-du</i>	‘to help’
	<i>makal-du</i>	‘to weaken’

There are two stop-initial suffixes in the nominal inflectional paradigm which also undergo voicing: the genitive locative /-ko/²⁵ and the ablative /-tik*/. However these two suffixes only undergo voicing when they attach to adverbs of place or time which take these suffixes:

(104) a.	<i>or-ko</i>	‘of there’	<i>ór-tik</i>	‘from there’
b.	<i>on-go</i>	‘of now’	<i>ón-dik</i>	‘from now’
	<i>nún-go</i>	‘of where’	<i>nún-dik</i>	‘from where’
	<i>amen-go</i>	‘of here’	<i>amén-dik</i>	‘from here’
	<i>an-go</i>	‘of over there’	<i>án-dik</i>	‘from over there’

Outside of this morphological context, these same suffixes do not undergo devoicing; rather, an epenthetic vowel is introduced after any stem-final consonant:

- (105) *sagarr-eko* ‘of the apple’ *sagarr-étik* ‘from the apple’
belaun-eko ‘of the knee’ *belaun-étik* ‘from the knee’

(24) Voicing of stops in restricted morphological contexts is common to most Basque dialects; but the specific contexts where the rule applies may vary. For instance, in Getxo the future suffix shows voicing after a nasal, but not after a lateral (*ingo* ‘to do, fut’, *ilko* ‘to die, fut’) and there is no voicing in the adjectival participle (*emóntha* ‘given’), cf. Hualde & Bilbao 1992: 53.

(25) As de Rijk (1993) convincingly shows ‘genitive locative’ is a misnomer for this suffix. The real function of this suffix is as a linking suffix to allow modification of an NP by a PP. Nevertheless, we will use the traditional name here.

2.7.4. Deletion processes in verbal groups

Participial forms ending in a nasal optionally lose their final consonant when followed by a vowel-initial auxiliary:

- (106) *žan eban* -> *ža eban* ~ *ža aban* 's/he ate'
 žaten éban -> *žate éban* 's/he was eating'

In certain cases, both the final /n/ of the participle and the initial /d/ of a following auxiliary can be deleted:

- (107) *esan dot* - *esaot* 'I have said'
 žan dosu - *žaosu* 'you have eaten'
 eran dosúe - *eraosúe* 'you-pl have drunk'
 emon dot - *emoott* 'I have given'

However, this contraction is highly lexicalized. It is possible with some sequences of participle plus auxiliary, but not with others. For instance, there is no contraction with the verb *žakiñ* 'to know' or with the auxiliaries *dau*, *dugu* and *dabe*:

- (108) *žaki[nd]ot* - not **žakiot* 'I have known'
 esan do(g)u - not **esaou* 'we have said'
 emon dau - not **emoau* 's/he has given'
 eran dabe - not **eraabe* 'they have drunk'

2.7.5. Final glide deletion in perfective participles

Perfective participles in *-a* borrowed from Spanish appear to have an underlying final back high vocoid, which surfaces when a vowel-initial inflectional suffix follows:

- (109) /atrapau/ *atrapa* 'to catch, perfective participle'
 /atrapau-a-gas*/ *atrapawágas* 'with catching'
 /atrapau-ago*/ *atrapawágo* 'crazier' (lit. 'more caught')

The process does not affect other falling diphthongs and does not apply to adjectives derived from verbs. Thus in the adjective *estimau*, *estimawa* 'esteemed' the final vocoid does not delete, unlike in the verb *estima* 'to esteem' to which it is related.

2.7.6. Total regressive assimilation

In a few forms a low vowel assimilates to a following round vowel in all features in sequences created by the deletion of an intervocalic /g/. This phenomenon takes places with the comparative suffix */-ago*/* and a few verbal forms:

- (110) *altuágó* -> *altuóo* 'taller'
 dago -> *doo* 's/he is'
 daukagu -> *daukuu* 'we have'

This assimilation does not take place in verbal forms where the low vowel is accented, as in *daroyá(g)u* 'we are taking it', not **daroyúu* or in any other cases; e.g.: *sa(g)u* 'mouse', not **suu*.

2.7.7. Dependent stem formation rules

Among the oldest and most characteristic phonological processes in the Basque language, there are a number of rules which apply exclusively in the formation of dependent stems from free stems (cf. Hualde 1991: ch. 3). Dependent stems are used followed by a derivational suffix or by the head of the compound in subcompounds. The rules involved in the formation of dependent stems are not productive. In Lekeitio, they account for a very limited number of alternations found in the lexicon.

A first process involved in the formation of dependent stems is the lowering to /a/ of stem-final mid vowels in bisyllabic stems when followed by a consonant. In Lekeitio, we find examples such as the following which show this alternation:

(111)	<i>arto</i>	'corn'	<i>aria-búru</i>	'ear of corn'
	<i>baso</i>	'forest'	<i>basa-mortu</i>	'desert'
	<i>ollo</i>	'chicken'	<i>ollá-sko</i>	'young chicken'

Stem-final vowels in dependent stems which are not subject to lowering are deleted. Stem-final vowels can be deleted: a/ if the stem contains more than two syllables (regardless of the quality of the final vowel, (112a)), b/ if high (regardless of number of syllables, (112b)), or c/ if followed by another vowel (112b,c):

(112)	a.	<i>arnasa</i> 'breath'	<i>arnas-estúka</i>	'panting'
		<i>itxaso</i> 'sea'	<i>itxas-kábra</i>	'a type of fish', lit. 'sea goat'
	b.	<i>begi</i> 'eye'	<i>bet-ul</i>	'eyebrow'
			<i>bet-ondo</i>	'frown'
	c.	<i>baso</i> 'forest'	<i>bas-érrí</i>	'farm house'
		<i>ollo</i> 'hen'	<i>óll-ar</i>	'rooster'

Consonants that become final as a consequence of final vowel deletion are changed in a number of ways. Stops are changed to /t/. The only examples that we have been able to find for Lekeitio are those given in (112b) above, involving the stem *begi* 'eye', which becomes *bet-* as a dependent stem. The rhotic flap is changed to /l/, some examples are the following:

(113)	<i>afari</i>	'supper'	<i>afal-du</i>	'to have supper'
			<i>afal-ostían</i>	'after supper'
	<i>bustarri</i>	'yoke'	<i>bustar-tu</i>	'to yoke'
	<i>erdéra</i>	'Spanish lg.'	<i>erdal-dun</i> ²⁶	'Spanish speaker'
	<i>euskéra</i>	'Basque lg.'	<i>euskal-dun</i>	'Basque speaker'

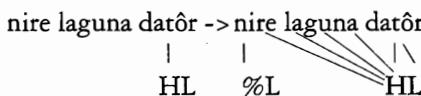

(26) The pairs *euskéra/euskal*, *erdéra/erdal* show, in addition, a change in vowel quality. This change is historically explainable if we assume the forms *euskara*, *erdara* (which are found in eastern dialects) for an earlier period.

The noun *gixon* 'man' has a completely peculiar dependent stem form in Basque, *gixa-*. In Lekeitio we find the following examples with this dependent stem:

- (114) *gixon* 'man' *gixá-jo* 'poor man'
 gixá-ja 'poor woman'

2.8. Accentuation

In Lekeitio Basque pitch is the main correlate of accent. Accents are invariably realized by means of a H*L tonal melody. That is, accented syllables carry a high tone, immediately followed by a sharp drop. Whereas the fall following an accent is always sharp, the rise in pitch on the accented syllable may not be abrupt, and syllables preceding the accented syllable (except for the first one in the phrase) are often realized on the same pitch as the accented syllable. That is, there is a phenomenon of leftward high tone spreading, that can be clearly observed, for instance, in the fundamental frequency tracing given in fig. 1:

Only some words are accented. The rest do not carry accentual prominence on any syllable. In the example above, *nire laguna datôr*, only the word *datôr* receives an accent. Observe also the two tracings in fig. 2. In fig. 2a *nire lagunen liburúa ra* 'it is the book of my friend', there is only one accent, on the penultimate syllable of *liburúa*. In fig. 2b *nire lagûnen liburúa ra* 'it is the book of my friends', on the other hand, there are two accents, since the word *lagûnen* 'of the friends' is accented, unlike *lagunen* 'of the friend':

Surface accentual prominence on a given syllable may have one of three sources.²⁷

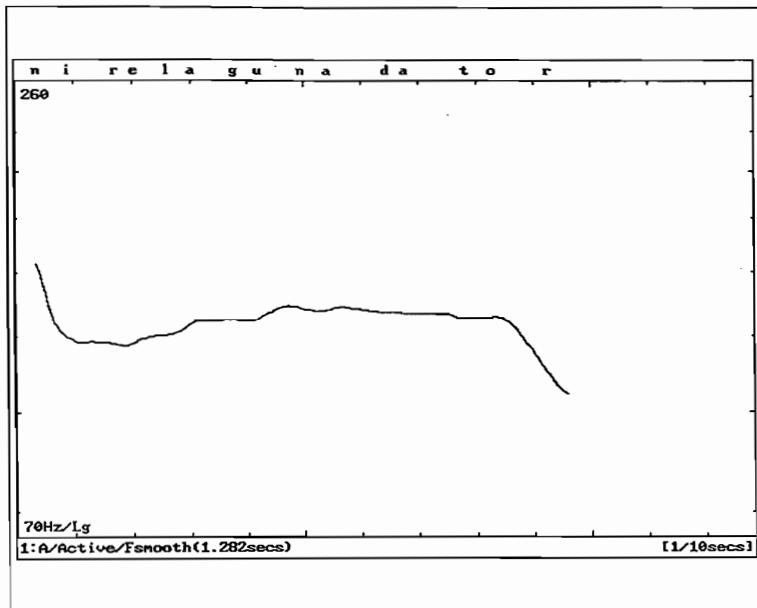

1. Lexical accent. There is a lexical distinction between accentually marked and unmarked morphemes. Whereas accentually unmarked morphemes do not have any accentual properties, marked or accented morphemes have the property of placing an accent on the penultimate syllable of the word that contains them. We will signal a lexical accent with an asterisk in underlying representation and with an acute accent (') on the prominent syllable in surface representation.

2. Syntactic accent. In certain syntactic constructions which will be examined, an accent is inserted (e.g. verbs receive penultimate accent in questions with question words).

3. Phrase-final accents. Lexically unaccented words or phrases receive accentual prominence on their final syllable when pronounced in isolation. In a sentence, an unaccented phrase will receive phrase-final accent only when focalized.

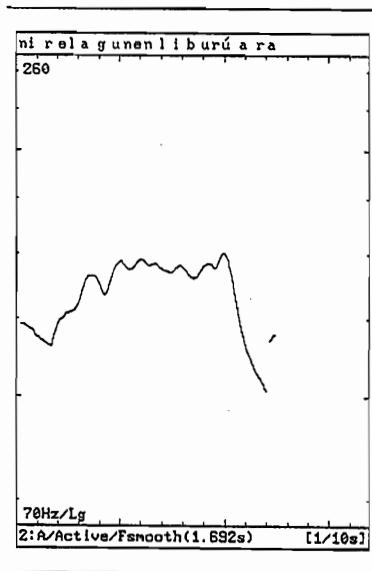

In every sentence one of the accents (lexical or otherwise) is given a greater prominence. We will refer to this greater level of prominence as focal accent since it

(27) The first description of this accentual system is due to Azkue (1923, 1931-32). Cf., also, Hualde (1989, 1990, 1991, 1993a).

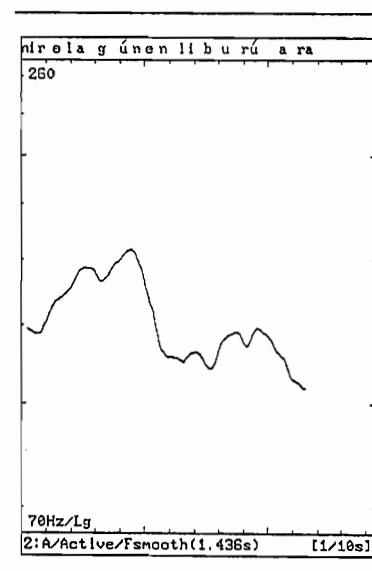

nire laguna datôr

Fig. 1

nire lagunen liburú a ra

fig 2a

nire lagûnen liburúa ra

fig 2b

corresponds to the focalized element in the sentence. Focal accent will be indicated with a circumflex accent mark (^).

2.8.1. Accented and unaccented morphemes

Words may be lexically accented or unaccented; most words being in fact unaccented. Unaccented words do not bear prominence on any syllable; except that, in phrases containing only unaccented words, the final syllable carries accentual prominence when the phrase is pronounced in isolation or constitutes the focus of the sentence. We indicate this phrase-final accent with a grave accent mark. The following examples contain only unaccented words:

- | | |
|---|--|
| (115) <i>iru abadè</i> | 'three priests' |
| <i>abadià</i> | 'the priest' |
| <i>gure erriko abade barrižari</i> | 'to the new priest of our village' |
| <i>gure erriko abade barrižentzakò</i> | 'for the new priest of our village' |
| <i>sure lagunen etxeko sutonduàn</i> | 'in the fireplace of your friend's house' |
| <i>gure lagunen erriko itturri ederrentzakò</i> | 'for the beautiful fountain of our friend's village' |

On the other hand, accented words present penultimate prominence regardless of their position in the phrase. Accentuation is, to be precise, a lexical property of morphemes, not of words. Accented morphemes, thus, have the property of assigning prominence to the penultimate syllable in the word that contains them. Accented morphemes (which will be marked with an asterisk in underlying representations) can be roots, suffixes or prefixes. The following phrases contain one or more accented words:

- | | |
|--------------------------------------|--------------------------------------|
| (116) <i>lau libúru</i> | 'four books' |
| <i>liburúa</i> | 'the book' |
| <i>liburuári</i> | 'to the book, dat' |
| <i>sure lagunen liburúa</i> | 'your friend's book' |
| <i>sure lagunen libúru barriža</i> | 'the new book of your friend' |
| <i>sure lagúnen libúru barriža</i> | 'the new book of your friends' |
| <i>súen lagúnen libúru modernúa</i> | 'the modern book of your-pl friends' |
| <i>gure eskoláko máixo barrižári</i> | 'to the new teachers of our school' |

In the examples in (116), the lexical accent of some of the words is a property of the root (/eskola*/ 'school', /liburu*/ 'book', /moderno*/ 'modern', /maiso*/ 'teacher'); in other words the accent is introduced by a suffix (the genitive plural /-en*/ and the dative plural /-ari*/).

Accented roots include a relatively small group of native items (most of which historically presented a complex morphological structure, cf. Hualde 1993a) and a large number of borrowings, both recent and very old. In general, there is considerable agreement between Lekeitio and other Biscayan (and Gipuzkoan) dialects

regarding which words are accented. A peculiarity, nevertheless, is that, unlike in other dialects, absolutely all perfective participles are unaccented in Lekeitio. This includes borrowings such as *bota* 'to throw' and old causatives such as *eruan* 'to carry', which are typically accented elsewhere. Spanish paroxytones and proparoxytones are generally adopted as accented items, whereas all Spanish oxytones are interpreted as unaccented in Lekeitio (see Vocabulary and section 2.9). Some representative examples of the different groups of accented monomorphemic words are the following:

(117) Accented monomorphemic words

- a. Old borrowings:²⁸ *aixkóra* 'ax', *alkondára* 'shirt', *aparízo* 'fishing tools', *dénda* 'store', *denpóra* 'time', *doméka* 'Sunday', *žénte* 'people', *erre-gálu* 'present', *errénta* 'rent', *errosarízo* 'rosary', *eskóla* 'school', *espíllu* 'mirror', *ganbára* 'attic', *ingúru* 'surroundings', *ixára* 'bed sheet', *kabána* 'shop', *katillu* 'cup', *keríxa* 'cherry', *kažóla* 'cage', *lakirízo* 'bird trap', *léku* 'place', *libúru* 'book', *puxíka* 'bladder', *txirínga* 'syringe'.
- b. Modern borrowings: *abíxu* 'warning', *agilla* 'eagle', *ajéntzi* 'agency', *alégre* 'happy', *ánimo* 'courage', *aspiradóra* 'vacuum cleaner', *bakúna* 'vaccine', *bañéra* 'bath tub', *dítsha* 'shower', *eskaparáte* 'showcase', *bolánte* 'steering wheel', *boligráfo* 'ballpoint pen', *büélta* 'turn', *ekipáje* 'luggage', *gasolína* 'gasoline', *karpéta* 'folder', *konéjo* 'rabbit', *kutxillo* 'knife', *lampára* 'lamp', *líxo* 'flat', *nebera* 'refrigerator', *porsiakáso* 'just in case', *rradiízo* 'radio'.
- c. Etymologically complex native and semi-native words:²⁹ *amáika* 'eleven', *amúma* 'grandmother', *asgúra* 'itching', *atéta* 'doorway', *báyetz* 'yes, of course', *bakárrik* 'only', *barižáku* 'Friday', *egúski* 'sun', *ewásten* 'Wednesday', *éwen* 'Thursday', *emerétti* 'nineteen', *erižótza* 'death', *etzikarámon* 'day after tomorrow', *euskéra* 'Basque language', *erdéra* 'Spanish', *galéper* 'quail', *ixéko* 'aunt', *kaltzérdi* 'sock', *larógei* 'eighty', *lengúsu* 'cousin', *okáran* 'plum', *íntxaur* 'walnut', *ollásko* 'chicken', *posáren* 'happy', *treotzára* 'basket', *úrdai* 'bacon', *úrratx* 'hazel nut'.
- d. Native words of unknown etymology: *ámu* 'fishing hook', *aséri* 'fox', *arráutza* 'egg', *arráusi* 'yawn', *artási* 'scissors', *átze* 'back', *áurre* 'front', *béste* 'other', *bekóki* 'forehead', *belárrí* 'ear', *berákatz* 'garlic', *éra* 'manner', *erénotz* 'laurel', *erástun* 'ring', *kankárró* 'big container', *kikírrí* 'penis', *lapíko* 'cooking pot', *mái* 'table', *mallúki* 'strawberry', *masústra* 'wild

(28) Included here are words that might have been borrowed at very different times. Some examples are words that appear to derive from Latin, from Old Spanish or some other Medieval Romance dialect. For other examples it is difficult to determine the time of the borrowing. These have been included among the "old borrowings" when they show adaptations that are no longer productive.

(29) In this group we include words whose morphological structure is not transparent, but where it is possible to recognize at least one component or which have been convincingly shown to derive from a morphologically complex structure. Semi-native words are those consisting of both native and borrowed morphemes.

blackberry', *órratz* 'needle', *sayérre* 'vulture', *símaur* 'manure', *tangárro* 'pail', *ugesába* 'boss', *úski* 'buttocks'.

Among the nominal inflectional suffixes, all plural suffixes and the nonplural ablative /-tik*/ and comitative /-gas*/ are accented (cf. section 3.1):

- (118) /abade-ak*/ *abadiák* 'the priests, abs/erg'
 /lagun-en*-a/ *lagunéna* 'the one of the friends'
 /lagun-a-gas*/ *lagunágas* 'with the friend'
 /mendi-tik*/ *mendítik* 'from the mountain'

In most declensional cases, the only difference between singular and plural is of an accentual nature, as can be seen in the following examples for *lagun* 'friend' (cf. section 3.1):

	singular	plural		singular	plural
erg	<i>lagunak</i>	<i>lagúnak</i>	gen	<i>lagunen</i>	<i>lagúnen</i>
dat	<i>lagunari</i>	<i>lagunári</i>	ben	<i>lagunentzako</i>	<i>lagunentzáko</i>

The singular/plural distinction is thus lost when the stem is accented, as shown in the following examples for *libúru* 'book':

	singular	plural		singular	plural
erg	<i>liburúak</i>	<i>liburúak</i>	gen	<i>liburúen</i>	<i>liburúen</i>
dat	<i>liburuári</i>	<i>liburuári</i>	ben	<i>liburuentzako</i>	<i>liburuentzáko</i>

In the morphology of participial forms, both the imperfective /-t(z)en*/ and the future /-ko*/ are accented (cf. section 3.2):

- (121) /eskribidu/ *eskribidu* 'write, perf'
 /eskribidu-ten*/ *eskribidúten* 'write, imp'
 /eskribidu-ko*/ *eskribidúko* 'write, fut'

A number of derivational suffixes are also accented; these include, for instance, the superlative /-en*/ and 'excessive' /-egi*/ (both better treated as inflectional, cf. section 2.6.2), the frequentative /-ro*/, the adjective forming /-ti*/ and the place-adjective forming /-tarr*/ (cf. section 3.3):

(122) /ederr-en*/	<i>edérren</i>	'most beautiful'
/ederr-en*-a/	<i>ederréna</i>	'the most beautiful one, abs'
/ederr-en*-en-tzako/	<i>ederrenentzáko</i>	'for the most beautiful one, ben'
/bero-egi*/	<i>berué(g)i</i>	'too hot'
/kale-tarr*/	<i>kalétar</i>	'town dweller'
/kale-tarr*-a/	<i>kaletárra</i>	'the town dweller, abs'
/aste-ro*/	<i>astéro</i>	'every week'
/gusur-ti*/	<i>gusúrti</i>	'liar'
/gusur-ti*-ari/	<i>gusurtizári</i>	'to the liar, dat'

Further examples of accented stems containing derivational suffixes are the following (cf. section 3.3 for a list of derivational suffixes and more complete exemplification):

- (123) Accented derived stems: *asikéra* 'beginning', *žaižokéra* 'birth', *žaskéra* 'way of dressing', *žokéra* 'tendency', *lodižéra* 'fatness', *orraskéra* 'style of combing', *sabaléra* 'width', *luséra* 'length', *laburréra* 'shortening', *ibilkéra* 'way of walking', *moskórti* 'drunkard', *ikaráti* 'frightful', *eskérti* 'lefthanded', *uskárti* 'farty', *lotzáti* 'shy', *gaixóki* 'sickly', *saspíki* 'premature baby', *gosóki* 'candy', *txarríki* 'pork', *lagúntza* 'help', *soldáutza* 'military service', *eskóniza* 'wedding', *gorríngo* 'yolk', *suringo* 'egg white', *egunéro* 'every day', *urtéro* 'every year', *edári* 'drink', *esnérun* 'milkman', *ikásdun* 'coal seller', *esaupíde* 'acquaintance', *illúntze* 'twilight', *lótzor* 'shy', *asmakíxun* 'invention', *atérpe* 'refuge', *astokillo* 'brute'.

There is no difference between words containing only one accented morpheme and words carrying more than one such morpheme. Prominence is on the penultimate of the word regardless of the number of accented morphemes within the word (and the position of the accented morpheme(s) within the word):

- (124) Accented root:

/belarri*-a/ *belarriža* 'the ear, abs'

Accented root and accented inflectional suffix:

/belarri*-ak*/ *belarrižak* 'the ears, abs/erg'

/lagun-en*-ari/ *lagunenári* 'to the one of the friends'

Two accented inflectional suffixes:

/lagun-en*-ari*/ *lagunenári* 'to the ones of the friends'

Accented root and two accented inflectional suffixes:

/tonto*-en*-ari*/ *tontuénári* 'to those of the stupid ones'

Accented root and derivational suffix:

/kanpo*-tarr*-a/ *kanpotárra* 'the outsider, abs'

Accented root, derivational suffix and inflectional suffix:

/kanpo*-tarr*-ak*/ *kanpotárrak* 'the outsiders, abs/erg'

2.8.2. Compound accent rule

A great number of compounds are accented, even when the members in isolation behave as unaccented. The (a) examples are of noun phrases containing an unaccented noun modified by an unaccented adjective. In these examples there is only phrase-final accent (except in the plural form). The (b) examples are noun+adjective compounds, which receive penultimate accent by the compound rule:

- (125) a. *lau sagu sàr* 'four old mice' b. *lau sagúsar* 'four bats'
sagu sarrà 'the old mouse' *sagusárra* 'the bat'
sagu sárrak 'the old mice' *sagusárrak* 'the bats'

- (126) a. *lau begi gorri* 'four red eyes' b. *lau begigórri* 'four red-eyed ones'
begi gorrižà 'the red eye' *begigorriža* 'the red-eyed one'

Additional examples of accented compounds are the following (127) (the two stems are separated by a hyphen, cf. also section 3.4):

- (127) Accented compounds: *arpei-gógor* 'shameless', *arratz-álde* 'evening', *atzó-sar* 'old woman', *asté-len* 'Monday', *aste-ásken* 'Weekend', *aste-sántu* 'Holy Week', *aitta-sántu* 'Holy Father', *aitta-súlo* 'daddy's baby', *ake-lárrre* 'witches' sabbath', *arta-bíru* 'ear of corn', *baba-lóra* 'pretty', *bas-érri* 'farmhouse', *begi-óker* 'crosseyed', *bei-ixíngor* 'sty' *buru-ándi* 'big-headed', *buru-gógor* 'hard-headed, stubborn', *žakí-nai* 'curiosity', *buru-óker* 'wrong-headed, stubborn', *žaižo-bárri* 'newly born', *erre-úsaiñ* 'smell of burning', *espata-žántza* 'sword-dance', *etxe-súlo* 'home-loving', *esiñ-ikúsi* 'envy', *es-bíar* 'accident', *gabón-sar* 'New Year's Eve', *gibel-ándi* 'nonchalant', *goitti-béra* 'type of skating board', *ikatz-árrí* 'mineral coal', *ill-árrí* 'tombstone', *ixerdi-lárrí* 'cold sweat', *itxas-kábra* 'type of fish', *kanpo-sántu* 'cemetery', *kata-kúma* 'kitten', *kikili-úsaiñ* 'smell of smoke', *men-di-tóntor* 'mountain summit', *mutil-sar* 'old bachelor', *negar-sótíñ* 'sob', *neská-sar* 'spinster', *odol-óste* 'blood sausage', *ordu-érdi* 'half an hour', *otzák-ill* 'sensitive to cold', *papar-górri* 'robin', *sarr-ántza* 'old look', *sar-tzáro* 'old age', *sasi-tárte* 'bush', *seir-éun* 'six hundred', *ser-éiñ* 'occupation', *tentel-úsaiñ* 'sleepiness', *traga-nárru* 'big eater', *tripakó-miñ* 'stomach pain', *ustel-úsaiñ* 'stench'.

Productively created compounds are accented. There is thus a rule inserting an accent in the lexical representation of compounds.

2.8.3. Deaccentuation

A few derivational suffixes have the property of erasing a lexical accent from the root to which they attach. These include */-lari/* 'profession, occupation' and */-keri/* 'act with negative connotations'. In the following examples the basic form is accented, but the derived word is accented:

- | | | | | |
|-------|-----------------|---------|---------------------|----------------|
| (128) | <i>txistu</i> | 'flute' | <i>txistulari</i> | 'flautist' |
| | <i>pelóta</i> | 'ball' | <i>pelotari</i> | 'ball-player' |
| | <i>txotxólo</i> | 'silly' | <i>txotxolokeri</i> | 'silly action' |

Lexical accents are also lost in the derivation of verbs from nouns or adjectives by means of suffixes such as */-tu/* and */-ratu/*. This follows from the strict ban against accented perfective participles in Leketio:

- | | | | | |
|-------|--------------|----------|------------------|--------------------|
| (129) | <i>tonto</i> | 'stupid' | <i>tontotu</i> | 'to become stupid' |
| | <i>áurre</i> | 'front' | <i>aurreratu</i> | 'to advance' |

2.8.4. Prosodic and morphological words

As mentioned, in Lekeitio lexical accents are always realized on the penultimate syllable of the word. This property makes clear what constitutes a prosodic word.

A fact that is frequently mentioned in studies on word order in Basque is that, even though the order of constituents in this language is relatively free, only a few

"particles" can occur between participle and auxiliary in their normal, uninverted order (cf., for instance, Hualde & Ortiz de Urbina 1987). In Lekeitio, the accentual behavior of a number of these particles shows that, in fact, they are prefixes on the auxiliary.³⁰ These include the conditional /ba-*/ and the evidentials /ete-*/ 'perhaps' and /ei-*/ 'seemingly'. As the examples show, these elements induce penultimate accent on the auxiliary:

- | | |
|---------------------------------------|------------------------------------|
| (130) a. <i>lagûnak ikusi-dosus</i> | b. <i>lagûnak ikusi ba-dósus</i> |
| friends.A see-AUX | 'if you have seen the friends' |
| 'you have seen the friends' | |
| (131) a. <i>ni etorrîko nitzateke</i> | b. <i>ni etorrîko ba-nitzatéke</i> |
| I.A come.F AUX | 'if I came' |
| 'I would come' | |
| (132) a. <i>lagûnak etorri-dira</i> | b. <i>lagûnak etorri ei-dira</i> |
| friends.A come-AUX | 'the friends seem to have come' |
| 'the friends have come' | |
| (133) a. <i>gâur etorri dira?</i> | b. <i>gâur etorri ete-díra?</i> |
| today come-AUX | 'did they perhaps arrive today?' |
| 'did they come today?' | |

An interesting fact that can be derived from the position of lexical accents is that prosodic words do not always coincide with morphological words. A case is found in verbal constructions. More often than not, a Basque verbal expression consists of a participle followed by an auxiliary (cf. section 3.1.2). These two elements constitute separate morphological words, as shown by the fact that certain elements may occur in between (cf. above) and that they are inverted in negative clauses (cf. section 4.1). Nevertheless, in the unmarked case, participle and auxiliary constitute a single prosodic word. This can be clearly shown in tenses formed with the imperfective or future participle.

Both the imperfective suffix /-ten*/ and the future /-ko*/ are accented. If the participle is the focus, the lexical accent of these suffixes will appear on the penultimate of the participle:

- | | |
|------------------------------------|--------------------------------|
| (134) <i>lagúnak etorrîko dira</i> | (135) <i>aitxak erângó dau</i> |
| friends.A come.F AUX | father.E drink.F AUX |
| 'the friends WILL come' | |
| 'father WILL drink it' | |

However, if focus is assigned to the preverbal constituent, the lexical stress of the participial suffixes will surface on the penultimate of the participle + auxiliary unit, showing that this is a single prosodic word:³¹

- | | |
|---------------------------------------|------------------------------|
| (136) a. <i>lagûnak etorrîko-díra</i> | b. <i>lagunâ etorrîkó-da</i> |
| friends.A come.F-AUX | friend.A come.F-AUX |
| 'THE FRIENDS will come' | |
| 'THE FRIEND will come' | |

(30) The prefical nature of these items was already noted by Azkue (1923: 43-44).

(31) Azkue (1931: 13) also notes this fact.

- c. *nire etxétik mendizâ ikustén-dot*
 my house.AB mountain.A see.I-AUX
 'from my house I see THE MOUNTAIN'
 d. *gure etxétik mendizâ ikusten-dógu*
 ourhouse.AB mountain.A see.I-AUX
 'from our house we see THE MOUNTAIN'

Besides the case where the participle receives focal accent (cf. 134-135 above), the lexical accent of the imperfect and future participle fails to move to the auxiliary, thus showing that there are two prosodic words, when the auxiliary carries a complementizer:

- (137) *posik dagô etxia salduko dabelako*
 happy s/he-is house.A sell.F AUX-because
 's/he is happy because s/he will sell the house'
- (138) *ikústen dosun etxia nire lagunêna da*
 see.I AUX-CP house.A myf riends.G.As is
 'the house that you see is the one of my friends'
- (139) *esan dau liburúa ekarríko dabela*
 say AUX book.A bring.F AUX.CP
 's/he said that s/he will bring the book'

Participle and auxiliary also constitute independent accentual domains when the focalized constituent appears in postverbal position. Compare the following sentences:

- (140) a. *ondorâ botaten-dábe*
 bottom.AL throw.I-AUX
 b. *botáten dábe, ondorâ*
 'they throw it TO THE BOTTOM [of the sea]'
- (141) a. *Pêru dala pentzatén-dot* b. *pentzátén dot Pêru dala*
 Peru.A is.CP think.I-AUX 'I think it is Peru'

The union of participle and auxiliary in a single prosodic word is thus limited to the case when the auxiliary does not carry a complementizer and there is a focalized constituent in preverbal position.

On the other hand, there are other cases where the domain that is relevant for penultimate accent placement (i.e. the prosodic word) is smaller than the morphological word. In indirect commands the verb carries an accent. This accent is placed on the penultimate of the verb but excluding the complementizer suffix /-ela/ from the domain:

- (142) *dátorrela esan-dot*
 s/he-comes-CP say-AUX
 'I told him/her TO COME'

Similarly, in nonfinite indirect commands carrying the suffix /-te*-ko/, a lexical accent appears on the antepenultimate syllable of the verb. In contrast, nonfinite verb forms in final clauses, which also carry the suffix /-te*-ko/ present penultimate accent, as expected. We interpret antepenultimate accent in nonfinite indirect commands as exclusion of the final syllable /-ko/ from the domain of the prosodic word:

- (143) a. *patatak erósteko esan-dotzat*
 potatoes.A buy.for say-AUX
 'I told him/her to buy POTATOES' (indirect command)
- b. *au diruau patatak erósteko da*
 this.A money-this.A potatoes.A buy.foris
 'this money is to buy POTATOES' (final)
- (144) a. *liburúa ekárteko esan-neutzan*
 book.A bring.for say-AUX
 'I told him TO BRING the book' (indirect command)
- b. *leidutéko emon-neutzun ori liburúa*
 read.for give-AUX that.A book.A
 'I gave you that book TO READ' (final)

2.8.5. Enclitic accent

A few postpositions have the property of assigning an accent to the preceding syllable. These include *be* 'too', *barik* 'without', and *bako* 'one without, -less':

- (145) *laguná be* 'the friend too'
 aittá barik 'without father'
 aittá bako umia 'the fatherless child'
 aittá bakua 'the one without father'
 aittá bakuari 'to the one without father, dat'
- (146) *sure laguná etorri-da dirú barik*
 your friend.Acome-AUX moneywithout
 'YOUR FRIEND came without money'
- (147) *txakurra ekarrí dau lagunák be*
 dog.A bring AUX friend.E too
 'the dog, the friend too did bring it'

In the case of *be* 'too', this accent will always appear on the penultimate of the clitic group, since this item cannot be followed by any inflection. The accent assigned by *be* would thus seem to be indistinguishable from a lexical accent on the penultimate of the clitic group. Nevertheless, a distinction between lexical and enclitic accent appears when the word preceding *be* is accented. A lexically accented word preceding the clitic will be accented on its penultimate syllable (not on the penultimate of the clitic group), as in *lagúnak be* [layúnape] 'the friends too, abs/erg'. We thus conclude that the accent that the enclitic element assigns is of a different

nature from lexical accent, since it shows a different behavior. In the example *lagúnak be* the enclitic accent which would be assigned to the last syllable of *lagúnak* is lost by an accent clash resolution rule: *lagúnák be* → *lagúnak be* (cf. section 2.8.7).

In the examples with *barik* and *bako*, on the other hand, it is always clear that the accent is assigned to the syllable preceding this postpositional element, regardless of the number of syllables in the phrase after this accent.

Enclitic elements such as *be*, *barik* and *bako* are also “invisible” for the assignment of focal accent. When the phrase to which they belong syntactically receives focal accent this falls on the word preceding the postposition (cf. section 4.1):

- (148) *sure laguna dirû barik etorri-da*
 your friend.A moneywithout come-AUX
 'your friend came WITHOUT MONEY'

(149) *ori mutillori ulê bakua da*
 that. A boy.A hair without.of A is
 'that boy is BALD (= without hair)'

another case where enclitic accent is assigned is verb forms in subordinate
 s. A lexically unaccented participle receives enclitic accent on its final syllable
 a following auxiliary carries a complementizer, thus failing to join in a single
 dic word:

(150) *Pêru etorrí dala esan-dau* (151) *txakurra ikusî dogulako*
 Peru.A come AUX-CP say-AUX dog.A see AUX-because
 's/he said that PERU came' 'because we have seen the dog'

(152) *ikusí dosun etxia nire lagunêna da*
 see AUX-REL house.A my friends.G.As is
 'the house that you have seen is the one of my friends'

The suffixes */-tako/* and */-niko/* also appear to present the property of assigning an accent to the preceding syllable, even though they are bound morphemes:

- (153) *apurtútako* 'broken'
apurtútakua 'the one broken'
etorríniko 'arrived'
etorrínikuari 'to the one having arrived, dat'

(154) *orixe dâ Ameriketára žúniko mutilla*
 that.A is Americas.AL go.REL boy.A
 'THAT is the boy who went to America'

(155) *atzo allagániko gixona ertzaiña dâ*
 yesterday arrive.REL man.A policeman.A is
 'the man who arrived yesterday is A POLICEMAN'

(156) *atzo nik apurtúniko basúa loižetára bota-dot*
 yesterday I.E break.REL glass.A garbage.ALthrow.AUX
 'I have thrown TO THE GARBAGE CAN the glass that I broke yesterday'

- (157) *mendittik etorrítakuari emon-dotzat*
 mountain.AB come.REL.Ds give-AUX
 'I have given it TO THE ONE who arrived from the mountain'

There are, thus, two distinct prosodic domains which are smaller than the prosodic phrase: the prosodic word and the prosodic clitic group. Neither of these prosodic domains needs to be coextensive with a morphological domain. The prosodic word and the prosodic clitic group are the respective domains of application of two different accentual rules: lexical accent assignment and enclitic accent assignment. The lexical accent that is carried by an accented morpheme is realized on the penultimate syllable of the prosodic word containing it. Examples of prosodic words are /saspi-garren*-a/ *saspigarréna* 'the seventh one, abs', /leku*-ko-a/ *lekukúa* 'the one of the place', /sagu*-sarr-a-ri/ *sagusarrári* 'to the bat' (with compound accent), /etorr-i dal/ (*berá*) *etorri-da* 's/he has come' or /etorr-i-ko*/ *gara/* (*gêu*)*etorriko-gára* 'we will come'. A prosodic clitic group is a domain where enclitic accent is assigned to the final syllable of the host. Examples of prosodic clitic groups are *laguná+be* 'the friend too', *dirú+barik* 'without money', *etorrí+dala* 'that s/he has come' and *apurtú+niko* 'broken'.

2.8.6. Focal accent

The most prominent accent in the sentence is that assigned to elements in focus position. The focus position is an obligatory constituent of the sentence in Lekeitio Basque; that is, focal accent must necessarily be assigned to some constituent in the sentence. With some exceptions to be noted below, focal accent will fall either on the word immediately preceding the verb, as in (158a,b) or on the verb itself (the participle in the case of analytical verbs), as in (158c).³²

- (158) a. *gaur goixian sure laguná etorri-da*
 today morning.IN your friend.A come-AUX
 'this morning YOUR FRIEND came' (and not someone else)
 b. *sure laguna gaur goxián etorri-da*
 'THIS MORNING your friend came' (and not some other time)
 c. *sure laguna etorrí da gaur goxian*
 'your friend DID come this morning'

Focal accent is a level of prominence added to a syllable that is assigned an accent by lexical or postlexical means. Thus, lexically unaccented words receive focal accent on their last syllable (which is made prominent by a rule of phrase-final accent) and accented words on the penultimate:

(32) As noted in the syntax chapter, sentences like (158a), where the focalized constituent is an intransitive subject (or a direct object) are actually ambiguous between an interpretation where the preverbal constituent is the pragmatic focus and another interpretation where there is no particular focus in the sentence. That is, although in every sentence there is an element that receives focal accent, not every sentence has a pragmatic focus.

- (159) *liburúa, lagunâk ekarri-dau*
book.A friend.A bring-AUX
'THE FRIEND brought the book'
- (160) *lagunak, liburúa ekarri-dau*
'the friend brought THE BOOK'
- (161) *liburúa, lagûnak ekarri-dábe*
book.A friends.E bring-AUX
'THE FRIENDS brought the book'

If the participle is not focalized and the preverbal constituent is made up of lexically unaccented words, focus accent must fall on the last syllable of the last word of this phrase. It is not possible to give contrastive focal accent to a nonfinal lexically unaccented element in a NP or PP, even if contrast is intended on a non-phrase-final constituent. Sentences (162b), (163b) and (164b) are ungrammatical:

- (162) a. *etxe barrižâ ikusi-dot, es subi barriža*
house new.A see-AUX no bridge new.A
'I saw THE NEW HOUSE, not the new bridge'
b. **etxé barriža ikusi dot, es subi barriža*
'I saw the new HOUSE, not the new bridge'
- (163) a. *neure lagunâk ekarri-dau, es seuriak*
my friend.E bring-AUX no yours.E
'MY FRIEND brought it, not yours'
b. **neurê lagunak ekarri dau, es seuriak*
'MY friend brought it, not yours'
- (164) a. *aitten erložuâ dâ, es arrebiena*
father.G watch.A is no sister.G.As
b. **aittén erložua da, es arrebiena*
'it is FATHER'S WATCH, not sister's'

On the other hand, if the focalized phrase contains one or more lexical accents, the first one of them will receive the greatest prominence in the unmarked case:

- (165) *sure lagînen liburúa ekarri-dot*
your friends.G book.A bring-AUX
'I have brought your friends' book'
- (166) *sure lagînen umia ikusi-dot*
your friends.G child.A see-AUX
'I have seen your friends' child'

Nevertheless, in the case of focalized phrases with lexically accented words in nonfinal position, it is possible to give greater prominence to a different word, making possible to contrast meanings prosodically:

- (167) a. *libûru barriža ekarri dot*
book new.A bring-AUX
'I brought the new BOOK'/
'I brought the new book'
- b. *libûru barrižâ ekarri dot*
'I brought the NEW book' (marked)
'I brought THE NEW BOOK'

Focalized phrases with multiple lexical accents are further exemplified in (168)-(169). As indicated, the strongest accent will fall on the syllable carrying the first lexical accent in the focalized phrase, as in (168a) and (169a), unless there is contrastive focus on a different element of the phrase, as in (168b)-(168c) and (169b):

- (168) a. *sure lagûnen bigârren liburúa ikusi-dot*
your friends.G second book.A see-AUX
'I have seen YOUR FRIENDS' SECOND BOOK'
'I have seen your friends' second book'
 - b. *sure lagûnen bigârren liburúa ikusi-dot*
'I have seen your friends' SECOND book'
 - c. *sure lagûnen bigârren liburúa ikusi-dot*
'I have seen your friends' second BOOK'
- (169) a. *erregalúa orrentzâko mutillenzâko ekarri-dábe³³*
present.A those.B boys.B bring-AUX
'they have brought the present FOR THOSE BOYS'
 - b. *erregalúa orrentzâko mutillenzâko ekarri-dábe*
'they have brought the present for those BOYS'

Another exception to the generalization that focal accent must fall on the word immediately preceding the verb, if it does not fall on the verb itself, is presented by those postpositions which assign enclitic accent (cf. section 2.8.5). These postpositions cannot receive focal accent (even if semantically they would appear to be focalized). Focus accent will fall on the preceding word:

- (170) *dirua, sure lagunâk be ekarri-dau*
money.A your friend.E too bring-AUX
'the money, YOUR FRIEND TOO has brought (it)'
- (171) *sure laguna, dirû barik etorri-da*
your friend.A money without come-AUX
'your friend has come WITHOUT MONEY'
- (172) *umia aittâ barik geldittu-san*
child.A father without remain-AUX
'the child was left FATHERLESS'
- (173) *ori mutillori ulê bakua da*
that.A boy-that.A hair without.of.A is
'that boy is bald (= hairless)'

Some other NP modifiers such as *gitxiénes* 'at least' and *gitxigorabéra* 'more or less' present the same property of being skipped in the assignment of focus accent to the preverbal constituent:

(33) In this sentence, *erregalúa* 'the present' constitutes a topic.

- (174) *Péruk amar txorî gitxiénes il ditxus*
 Peru.E ten bird at least kill-AUX
 'Peru has killed TEN BIRDS at least'

- (175) *nire aittak amar txitxârro³⁴ gitxigorabéra atrapa-ditxus*
 my father.E ten fish more or less catch-AUX
 'my father has caught TEN FISH more or less'

Certain adverbs which express an attitude on the part of the speaker about the proposition such as *beintzat* 'at least', *barrix* 'however', *béiñi-peñi* 'at least', etc., can never be focalized for semantic reasons. Interestingly, they do not allow a phrase to their left to receive focal accent either. When one of these adverbs appears in preverbal position, focus accent (and interpretation) must necessarily be on the verb:

- (176) a. *lagunak beintzat ekarrî dau* b. **lagunak beintzât ekarri dau*
 friend.E at least bring AUX c. **lagunâk beintzat ekarri dau*
 'the friend, at least, brought it'

Since the assignment of focal accent is directly related to word order, the topic will be further discussed in the Syntax chapter.

2.8.7. Focalization with synthetic verbs

In main clauses of declarative sentences, an unaccented synthetic verb and a preceding unaccented focalized phrase constitute a single prosodic unit. This implies that focal accent is realized on the verb and not on the semantically focalized phrase. This does not result in lack of differentiation with sentences in which the assertion is focalized, since in this second case the affirmative particle *ba(i)* is prefixed to the synthetic verb, as in (177b-178b):³⁵

- | | |
|---|---|
| <p>(177) a. <i>gixona dâ</i>
 <i>man.A is</i>
 <i>'it is THE MAN'</i></p> <p>b. <i>ba(i)dâ gixona</i>
 <i>'it IS the man'</i></p> | <p>(179) <i>aittak dakî</i>
 <i>father.Ehe-knows</i>
 <i>'FATHER knows'</i></p> |
| <p>(178) a. <i>gure laguna datôr</i>
 <i>our friend.A s/he-comes</i>
 <i>'OUR FRIEND is coming'</i></p> <p>b. <i>badatôr gure laguna</i>
 <i>'our friend IS coming'</i></p> | <p>(180) <i>es tatôr</i>
 <i>no s/he-comes</i>
 <i>'s/he is NOT coming'</i></p> |

This phenomenon takes place in declarative sentences, exclusively. In interrogative sentences the accent does not move to the verb:

(34) A specific type of fish.

(35) It is impossible to place focus accent on the preverbal word in these examples: **gixonâ da*, **gure laguna dator*, **aittâk dakî*.

- (181) *gixonâ da?*
man.A is
'is it the man?'
- (182) *gure lagunâ dator?*
our friend.A s/he-comes
'is our friend coming?'

There is no fusion in a single accentual unit if either the word in preverbal position (184)-(187) or the verb (188)-(190) carries a lexical accent. In this case, focal accent does appear on the preverbal constituent:

- | | |
|--------------------------------------|-----------------------------|
| (184) <i>liburûa da</i> | (188) <i>gixonâ dakárre</i> |
| book.A is | man.A they-bring |
| 'it is the book' | 'they are bringing THE MAN' |
| (185) <i>gixônak diras</i> | (189) <i>diruâ daukosúe</i> |
| men.A they-are | money.A you.p-have |
| 'it is THE MEN' ('they are THE MEN') | 'you-pl have THE MONEY' |
| (186) <i>mutil tontûa dator</i> | (190) <i>êš takîže</i> |
| boy silly.A he-comes | no they-know |
| 'THE SILLY BOY is coming' | 'they do NOT know' |
| (187) <i>aittîtak daki</i> | |
| grandfather.E he-knows | |
| 'GRANDFATHER knows' | |

2.8.8. Addressive and imperative accent

Terms of address receive penultimate accent: *es, gixóna!* 'no, man!', *bai, andría!* 'yes, ma'am!'. Perfective participles used as imperatives are also accented, but only if they receive focus accent: *etôrri ona!* 'come here!', *žûn etxera!* 'go home', but *onâ etorri* 'come HERE', *etxerâ žun* 'go HOME'. In a narrative, perfective participles are also accented when they are used without an auxiliary; e.g.: *kéndu orretxeri, mandibulía, esta?* 'he took its jaw off, right?'

2.8.9. Question accent

In question-word questions both synthetic and analytical verbal forms are accented on their penultimate syllable. Compare the following examples:

- | | |
|--------------------------|------------------------|
| (191) <i>aittak daki</i> | (192) <i>nok daki?</i> |
| father.E he-knows | who.E s /he-knows |
| 'FATHER knows it' | 'WHO knows it?' |

- (193) *sure lagunâkiñ sabiltzaz*
 your friends.C you-walk
 'you are going WITH YOUR FRIENDS'
- (194) *nôas sabiltzaz?*
 who.C you-walk
 'WITH WHOM are you going?'

In question-word interrogative sentences with analytic verb constructions the accent appears on the penultimate of the participle + auxiliary unit:

- (195) *nôr etorri-da?*
 who.A come-AUX
 'who has come?'
- (196) *sêr ekarri-dôsu?*
 what.A bring-AUX
 'what have you brought?'

2.8.10. Accent clash resolution

When two accents occur on adjacent syllables, one of the two is removed. Whether it is the first or the second of the two abutting accents that is deleted depends on the particular morphological and prosodic configuration. We must thus postulate two separate rules:

- (197) a. Accent clash resolution rule 1 (ACR1):

$* \rightarrow \emptyset / * _$

An accent is deleted immediately following another accent.

- b. Accent clash resolution rule 2 (ACR2)

$* \rightarrow \emptyset / _ *$

An accent is deleted immediately preceding another accent.

ACR1 applies to remove an enclitic accent when the preceding syllable bears a lexical accent:

- (198) lexical accents: *lagúnak be*
 enclitic accent: *lagúnák be*
 ACR1: *lagúnak be [layúnape]*
 'the friends abs/erg too'

In participle + auxiliary groups, when the participle bears a final accent (enclitic or focal accent) a lexical accent on the first syllable of the auxiliary is lost by ACR1:

- (199) lexical accents: *erosi dábe*
 focal accent: *erosí dábe*
 ACR1: *erosí dabe*
 'they DID buy it'

- lexical accents: *erosi dáben etxia*
 enclitic accent: *erosí dáben etxia*
 ACR1: *erosí daben etxia*
 'the house that they have bought'

Similarly, a conjugated verb with initial accent loses its accent by ACR1 when the preceding word bears focal accent on its last syllable. Focal accent, thus, always takes precedence over any other adjacent accent:

- (200) lexical accents: *gixona dóya*
focal accent: *gixonâ dóya*
ACR1: *gixonâ doya*
'THE MAN is going'
- (201) lexical accents: *es dóya*
focal accent: *ê dóya*
ACR1: *ê doya*
's/he is NOT going'³⁶
- (202) lexical accents: *gixona éi-da*
focal accent: *gixonâ éi-da*
ACR1: *gixonâ ei-da*
'it seems to be THE MAN'

On the other hand, when two lexical accents are found on adjacent syllables, ACR2 applies to delete the first of the two accents. Since lexical accents always fall on the penultimate syllable one would expect that there should not be any situation where two lexical accents in a two word sequence would be realized on adjacent syllables. The situation does, nevertheless, arise with the few exceptional monosyllabic words that are accented, such as /mai*/ 'table' (whose two underlying syllables are contracted to one) or the question words /nor*/ 'who', /ser*/ 'what' followed by a bisyllabic accented word:

- (203) lexical accents: *mái ónak*
ACR2: *mai ónak*
'good tables'

ACR2 also applies to remove a lexical accent immediately followed by a question accent:

- (205) lexical accents: *nók daki*
question accent: *nók dáki*
ACR2: *nok dáki*
nok dáki?
'who knows?'

(36) Notice thus the contrast between *ê doya* 's/he is NOT going' and *es datôr* 's/he is NOT coming', *es dâ* 's/he/it is NOT'. Basterrechea (1974: 333) notes similar facts for the dialect of Gernika, expressing surprise at the seemingly exceptional behavior of the negative particle when followed by conjugated forms of the verb 'to go': "lo más sorprendente del caso es que haya un verbo único para el cual las cosas suceden de un modo totalmente distinto. Se trata del verbo JOAN cuando se conjuga sintéticamente." It is quite likely that the situation in Gernika is as in Lekeitio; that is, the conjugated forms of 'to go' are accented and ACR1 applies.

Sequences where a focalized monosyllabic question word such as /nor*/ or /ser*/ is followed by a verb with lexical accent on the first syllable are exceptional in having two possible realizations:

- (206) lexical accents: *nór dóya*
 ACR1/ACR2: *nór doya ~ nor dóya*
 nór doya? ~ nor dóya?
 'who goes?'

Notice that in this example the first word bears focal accent in addition to lexical accent and the second lexical accent is also reinforced by question accent.

2.9. Major intonational patterns

Intonation is an aspect of Basque phonology which has not been studied in any detail in any previous work. In this section, we will describe only the most general intonational patterns used in declarative and interrogative sentences in Lekeitio. Much more work awaits to be done in this area.

2.9.1. Declarative sentences

Declarative sentences present a final fall in pitch. This fall starts on the syllable carrying the last accent. In fig. 3 *nire lagunâk eran dau* 'my friend has drunk it' the pitch drops after rising on the last syllable of *lagunâk* 'friend, erg', which carries focal accent, and keeps descending until the end of the utterance:

Final declarative intonation is thus characterized by a right boundary tone L%, adopting the framework of Pierrehumbert (1980), Beckman & Pierrehumbert (1986) and related work. Since accented syllables bear a H*L pitch accent, a boundary tone after it will cause a pronounced and steady drop from the last accented syllable to the end of the utterance. The example above would have the following schematic representation: *nire lagunâk eran dau*

H*L L%

The focal accent always causes a sharp drop in pitch on the syllables following the accented one, but the pitch will rise again if there are any other accents; after which it will fall again, as in fig 4 *nire lagûnen liburúa ra* 'it is the book of my friends'.

If the final syllable in the utterance carries an accent (necessarily focal), this syllable will bear a HL contour, as in fig 5 *nire laguna râ* 'it is my friend'.

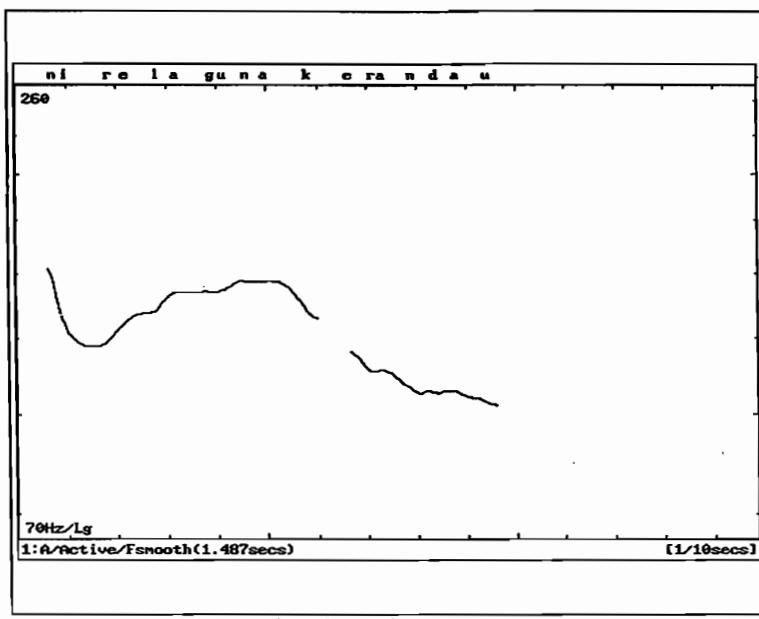

Fig. 3

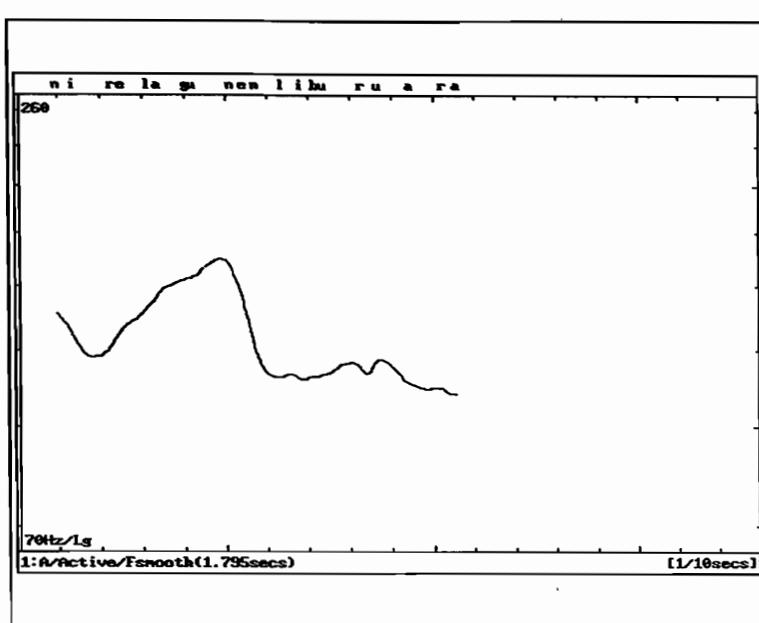

Fig. 4

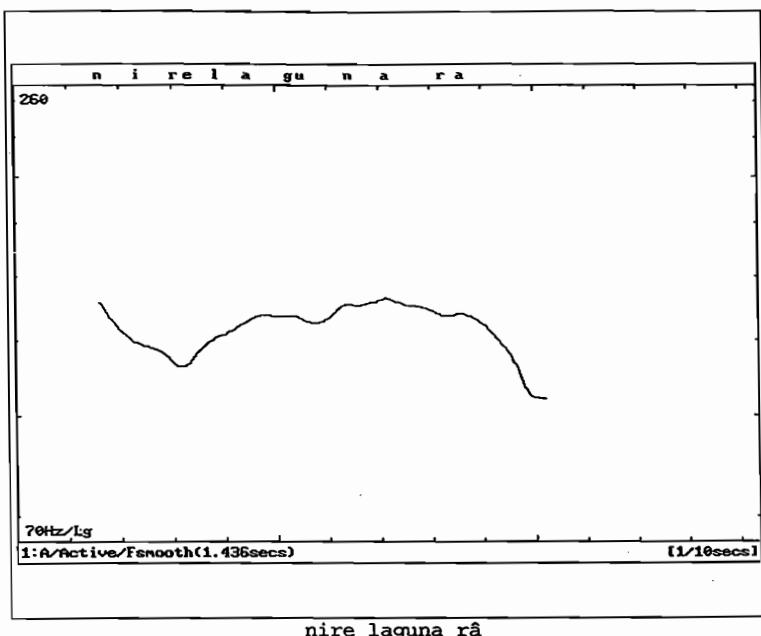

Fig. 5

2.9.2. Yes-no questions

Unlike in Spanish, the most usual pattern in yes-no questions does not present a final rise (cf. Navarro Tomás 1944, Sosa 1991). Yes-no questions are intonationally distinguished from declaratives in that they have a higher overall pitch and the final syllable is considerably lengthened. Compare fig. 6 *umiâ erun-dau mendira* 's/he has taken the child to the mountain' with the corresponding interrogative sentence in fig. 7 *umiâ erun dau mendira?* 'has s/he taken the child to the mountain?'.

Interrogative sentences also differ from the corresponding declarative structures in certain rules of accent placement, a fact which results in greater differences in intonational contours. As was mentioned in section 2.8.7, in declarative sentences lexically unaccented synthetic verbs carry the focal accent when the constituent to their left is semantically focalized and lexically unaccented. But this does not take place in interrogative sentences. The patterns in fig. 8 *nire lagunâ ra?* 'is it my friend?' and fig. 9 *nire lagunâ dator?* 'is my friend coming?' are, thus, quite different from the corresponding declarative patterns in fig. 5 and fig. 1 (of section 2.8.1) above, respectively; due to the presence of the focal accent on the last syllable of *lagunâ* 'the friend' in fig. 8 and fig. 9, but on the last syllable of the verb in fig. 5 and fig. 1.

Such effects are not found when the focalized word preceding the verb is lexically accented. This word will bear an accent on its penultimate syllable both in declarative and interrogative sentences. In this case, the difference between statement and question will be given exclusively by the higher pitch and final lengthening of the

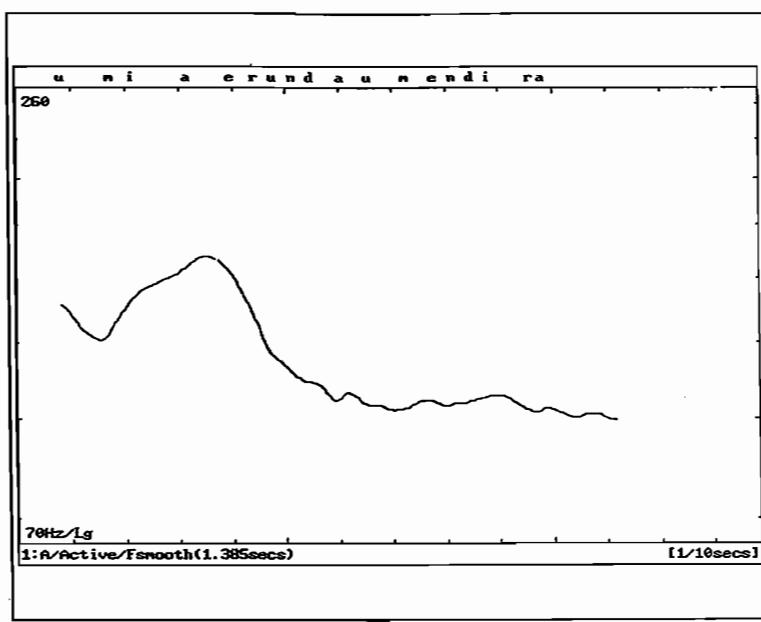

Fig. 6

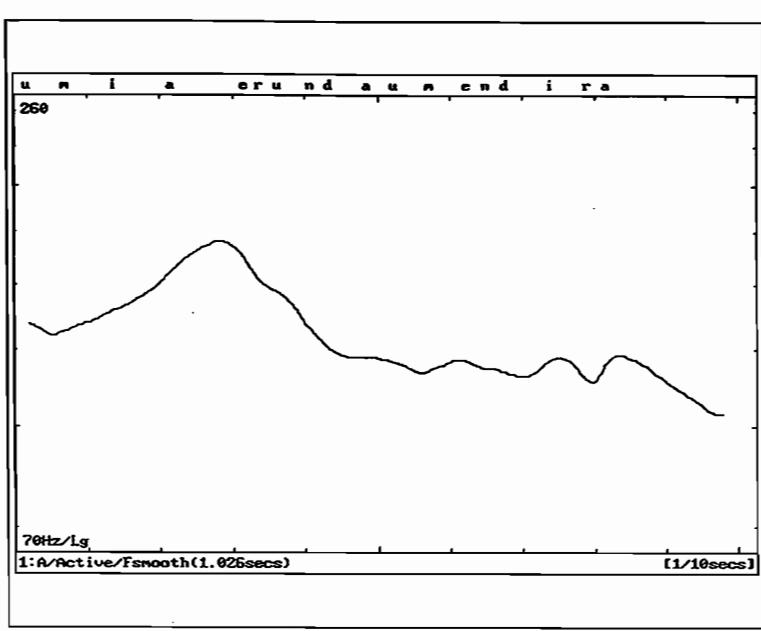

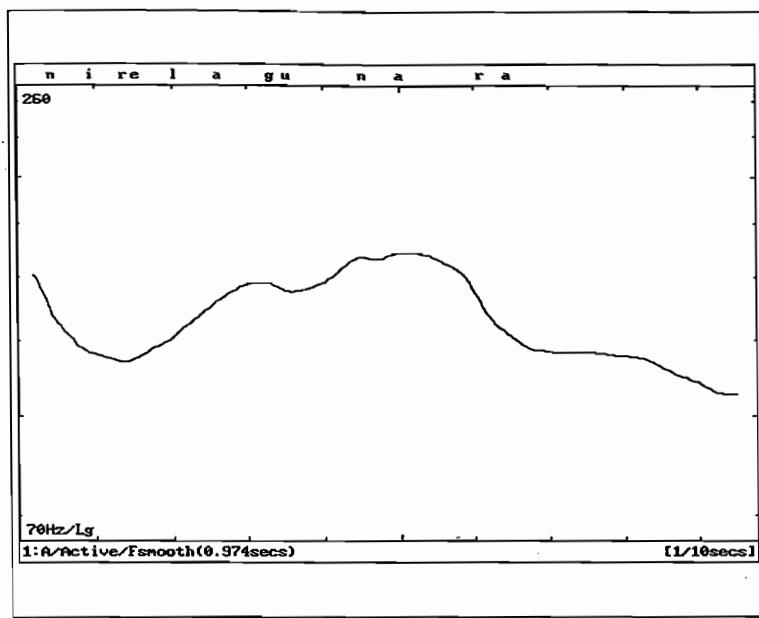

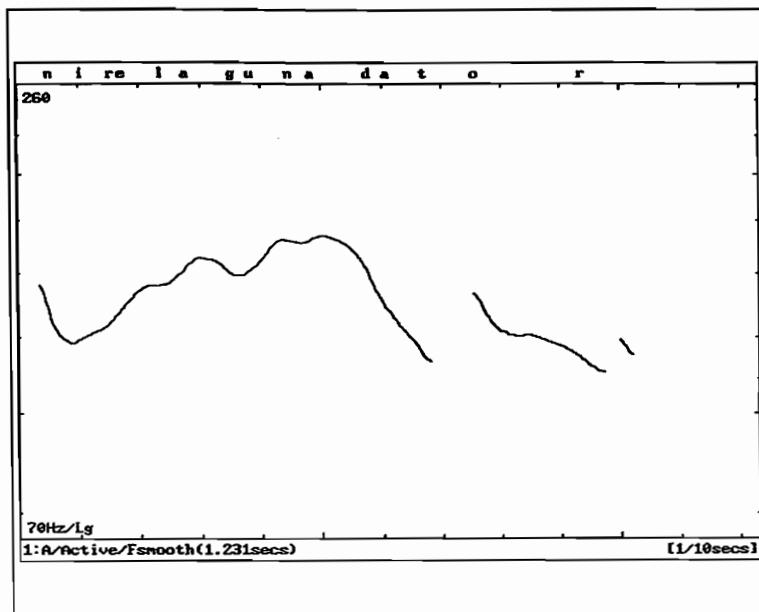

Fig. 7

nire lagunā ra?

Fig. 8

nire lagunā dator?

Fig. 9

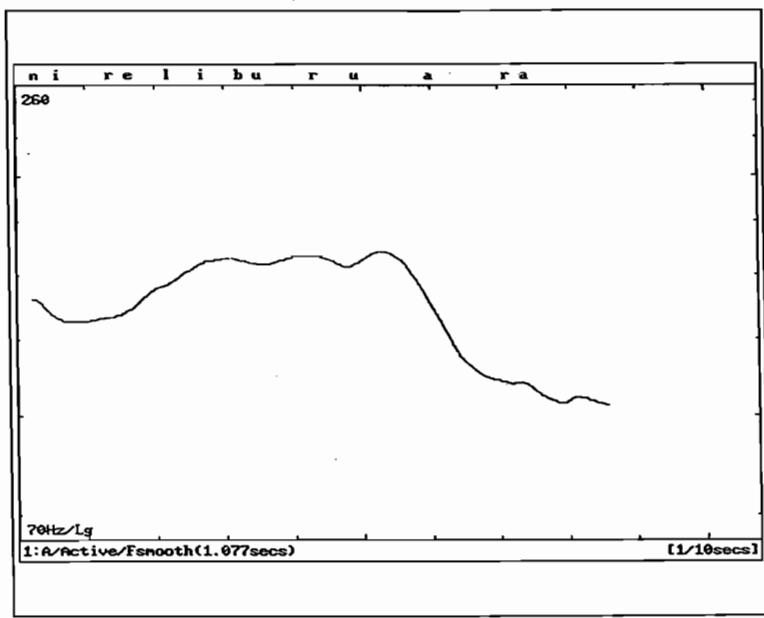

Fig. 10

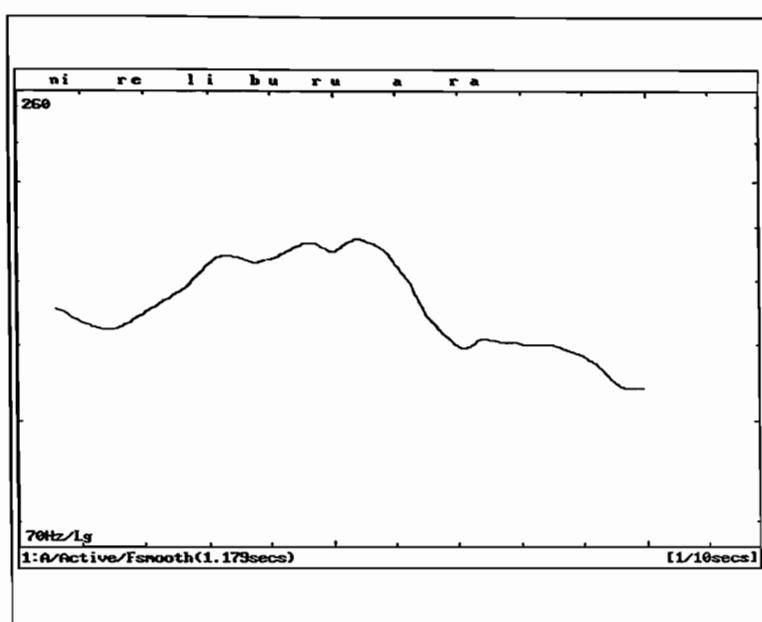

Fig. 11

interrogative. Compare fig. 10 *nire liburúa ra* 'it is my book' and fig. 11 *nire liburúa ra?* 'is it my book?'.

Given these accentual effects, yes-no questions may differ from statements in more than its higher pitch level and final lengthening.

2.9.3. Question-word questions

In question-word questions the question-word carries a very high pitch followed by a very sharp drop, as can be seen in fig. 12 *noréna ra umia?* 'whose is the child?' and fig. 13 *nôr erún-dau mendira?* 'whom has s/he taken to the mountain?'

As can be observed in fig. 13 as well as in fig. 14 *noréna ra liburúa?* 'whose is the book' and fig. 15 *nôr erún-dau nire lagúnen amúmak?* 'whom has your friends' grandmother taken?', lexical and other accents after the question-word have a relatively small effect on the overall contour. In the examples, the accents on the penultimate syllable of *liburúa* 'the book', *lagúnen* 'of the friends' and *amúmak* 'the grandmother, erg' and on the final of *erún* produce a slight raising of the pitch on those syllables which breaks the overall falling pattern.

As mentioned in section 2.8.9 (and shown in some of the examples already given), in question-word questions an accent is introduced on the penultimate syllable of the verb + auxiliary unit, which results in an additional contrast between declaratives and question-word interrogatives. Compare the declarative sentence in fig. 16 *umiâ erun-do(g)u mendira* 'we have taken the child to the mountain' with the

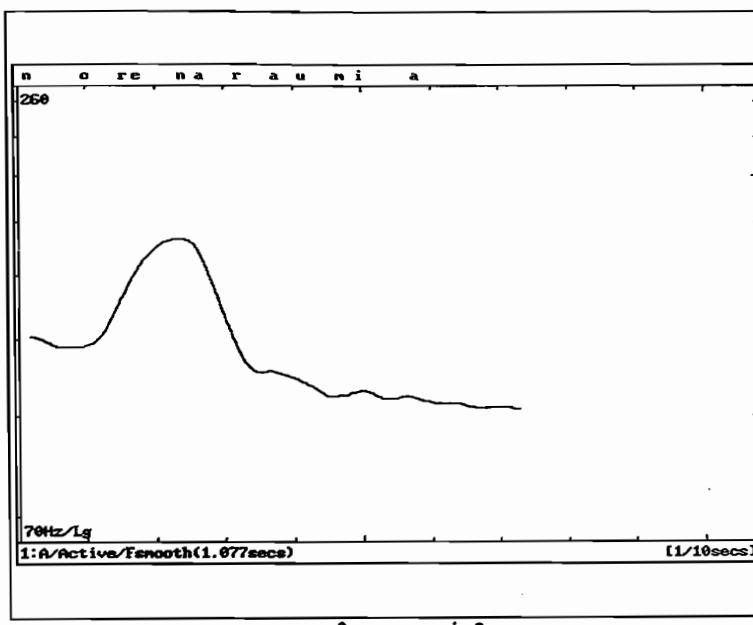

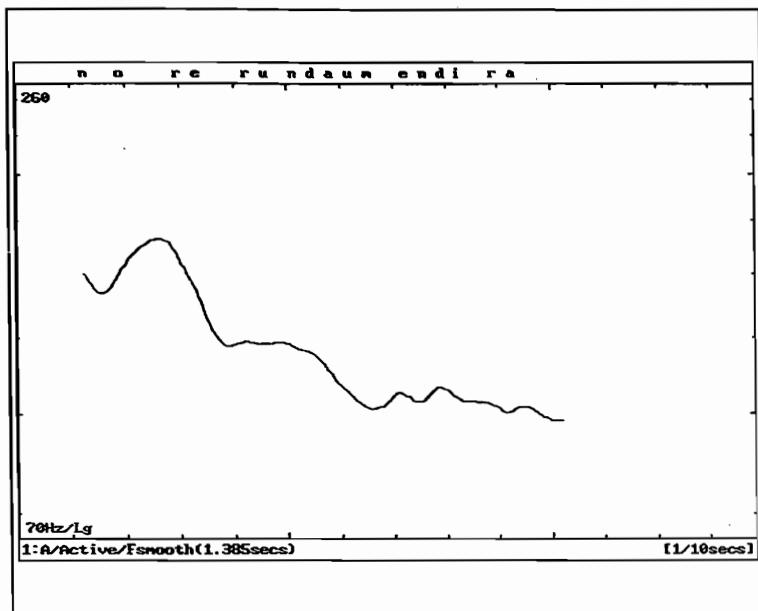

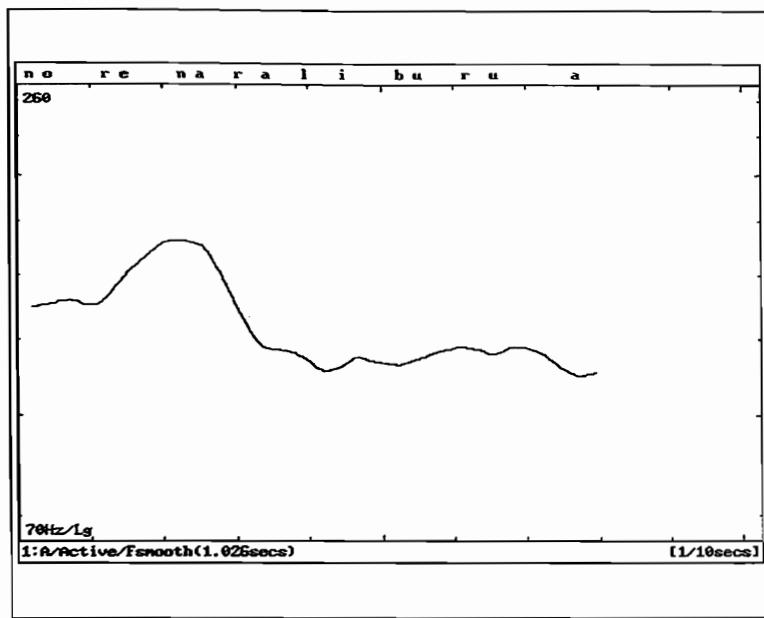

Fig. 12

nôr erún-dau mendira?

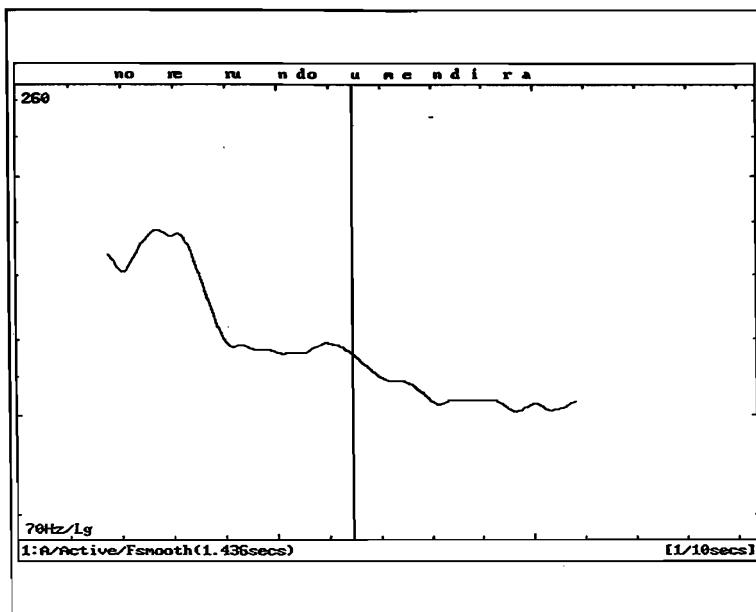

Fig. 17

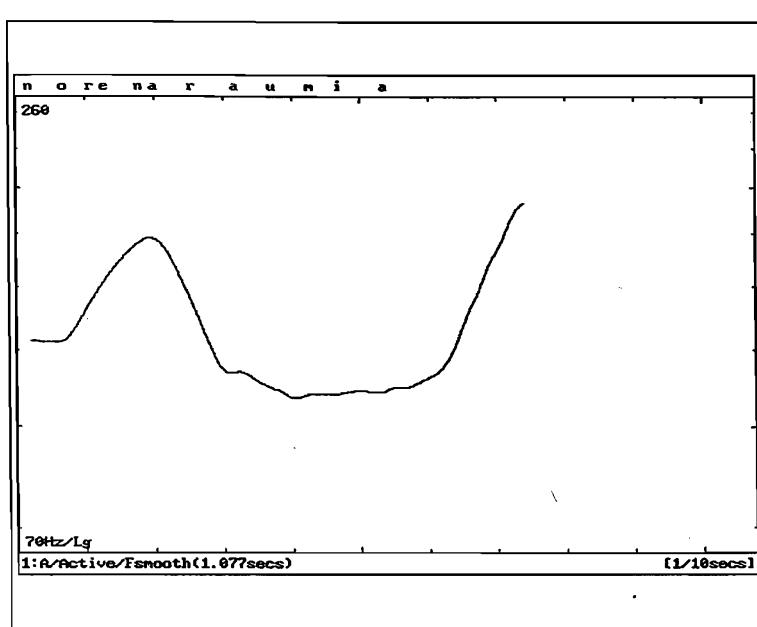

Fig. 18

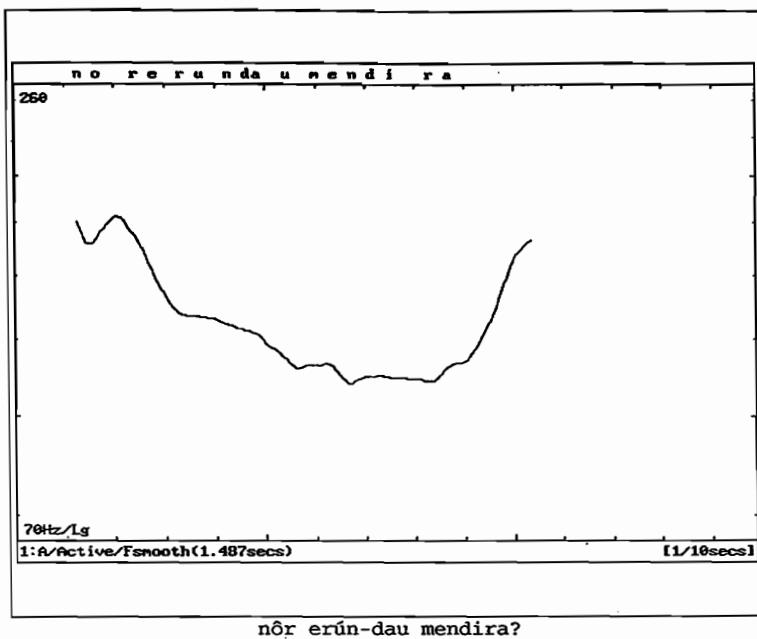

Fig. 19

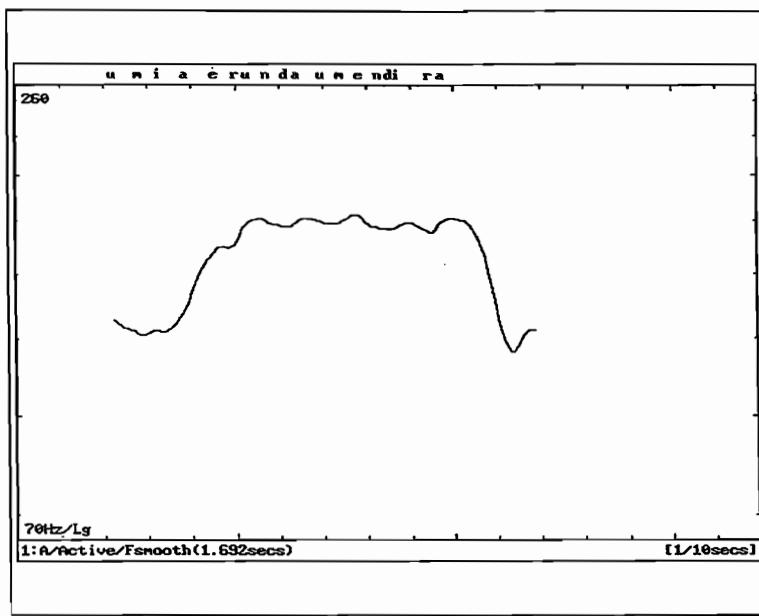

interrogative sentence in fig. 17 *nôr erun-dó(g)u mendira?* 'whom have we taken to the mountain?'.

There is a second, less common, intonational pattern in interrogatives which differs from the one seen in the previous examples in the presence of a final rise (a boundary H% tone), as shown in fig. 18. *norêna ra umia?* 'whose is the child' and fig. 19. *nôr erún-dau mendira?* 'whom did s/he take to the mountain?'.

2.9.4. Confirmation questions

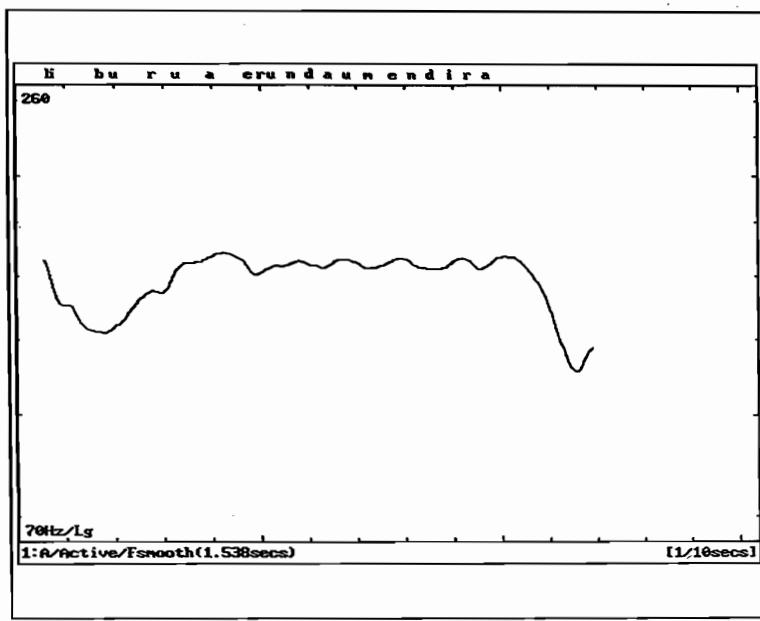

Questions which are requests for clarification or confirmation are characterized by a very peculiar intonational pattern. In such questions there is no focal accent assigned to any element in the sentence. In yes-no confirmation questions there is a high pitch plateau from the second syllable of the sentence, falling only at the end, as shown in fig. 20 *umia erun-dau mendira?* '(you are asking whether) s/he has taken the child to the mountain?' and fig. 21 *liburúa erun-dau mendira?* '(you are asking whether) s/he has taken the book to the mountain?'.

In question-word confirmation questions, the general pitch of the sentence is also maintained at a high level (with only small falls after accents) rising even much higher at the end, as shown in fig. 22 *noréna ra umia?* '(you are asking) whose the child is?' and fig. 23 *nor erún-dau mendira?* '(you are asking) whom s/he has taken to the mountain?'.

2.10. Adaptation of borrowings

In this section, we summarize the major phonological changes that take place in the adaptation of Spanish borrowings, concentrating on those that apply in a productive manner (cf. Hualde 1993). Most of the facts discussed in this section have already been mentioned in other sections.

A way in which borrowings are commonly adapted is by replacing those sounds which are not found in the borrowing language. The only Castilian Spanish phoneme that is not present in Leketio Basque is the voiceless interdental fricative /θ/. This sound is systematically replaced by /s/ in borrowings (which can be palatalized after /i/), as in the following examples:

(207) Spanish

<i>cepillo</i> > <i>sepillo</i>	'brush'	<i>circuito</i> > <i>sirkusto</i>	'circuit'
<i>cerveza</i> > <i>serbesa</i>	'beer'	<i>bicicleta</i> > <i>bixikléta</i>	'bicycle'

The numerous Spanish words ending in *-tad/-dad* which have been borrowed add a final *-e*, since *-d* is not a possible word-final segment in Lekeitio Basque:

(208) *umildade, unidad, abillidade, amistade, eletrisidade, kalidade, kantidade, karidade, kasualidade, komodidade, kuriosidade, libertade, edade.*

As was mentioned in section 2.2.3, borrowed words such as *sarkento* < Sp. *sargento* 'sargent', *kertse* < Sp. *jersey* 'sweater', *kittánu* < Sp. *gitano* 'gypsy', and several others show that /x/ was replaced by /k/ until recently. Nowadays, however, the voiceless velar fricative is a perfectly integrated phoneme in Lekeitio Basque and new borrowings with this sound are not changed.

There are cases where, corresponding to Spanish /χ/, we find [ʃ] or [ʒ] in Lekeitio; e.g.: Sp. *cojo*, Lek. *kóixu* 'lame'; Sp. *cogido*, Lek. *kožidu* 'to gather the fishing gear'. These correspondences do not show adaptation of any kind, recent or old; but, rather, the preservation in those borrowings in Lekeitio Basque of the old Spanish pronunciation (cf. section 2.2.3).

Besides the replacement of foreign sounds, borrowings can be adapted according to the phonological rules and phonotactic constraints of the language. When we consider the treatment of Spanish borrowings in Lekeitio Basque, an interesting fact that emerges is that some of these adaptations apply systematically only in some very specific environments, unadapted borrowings being otherwise freely admitted. An example is provided by the way borrowings containing palatalizable consonants are adapted to comply with the palatalization rules of Lekeitio Basque (cf. sections 2.5.2 and 2.5.4). As was mentioned, borrowings are exceptionlessly adapted in this manner when the palatalizable consonant is word final; e.g.: Sp. *tenis* > *ténix*, Sp. *automobil* > *automóbil*, Sp. *latín* > *latiñ* (for more examples, cf. the corresponding sections). Outside of this very specific context, palatalization in borrowings is a lot less systematic; that is, not every borrowing is adapted to undergo the rule; e.g.: *killo* 'kilogram', but *kilométro* 'kilometer'.

Similarly, the rule of insertion of [ʒ] between a high front vocoid and a following vowel applies rather systematically in borrowings ending in *-ia*, *-io*; e.g.: *notario* > *notarízo* 'notary'. Otherwise, borrowings are not generally adapted in this manner (cf. section 2.6.2).

A connected phenomenon is that certain Spanish endings are changed in systematic ways. The Spanish endings *-sión*, *-ción* are consistently and productively replaced by *-ñío* (*siñoy-* when inflected, cf. section 2.6.6.). Among many other examples, we find the following:

(209) Spanish

<i>afición</i>	>	<i>afisiño, afisiñoya</i>	'fondness'
<i>vacación</i>	>	<i>bakasiño, bakasiñoya</i>	'vacation'
<i>excursión</i>	>	<i>eskursiño, eskursiñoya</i>	'excursion'
<i>infección</i>	>	<i>infesiño, infesiñoya</i>	'infection'
<i> impresión</i>	>	<i>inpresiño, inpresiñoya</i>	'impression'

Other Spanish words ending in *-ón* replace this ending by *-o/-oy-*. There is a great number of words in this group. Some examples are the following:

(210) Spanish

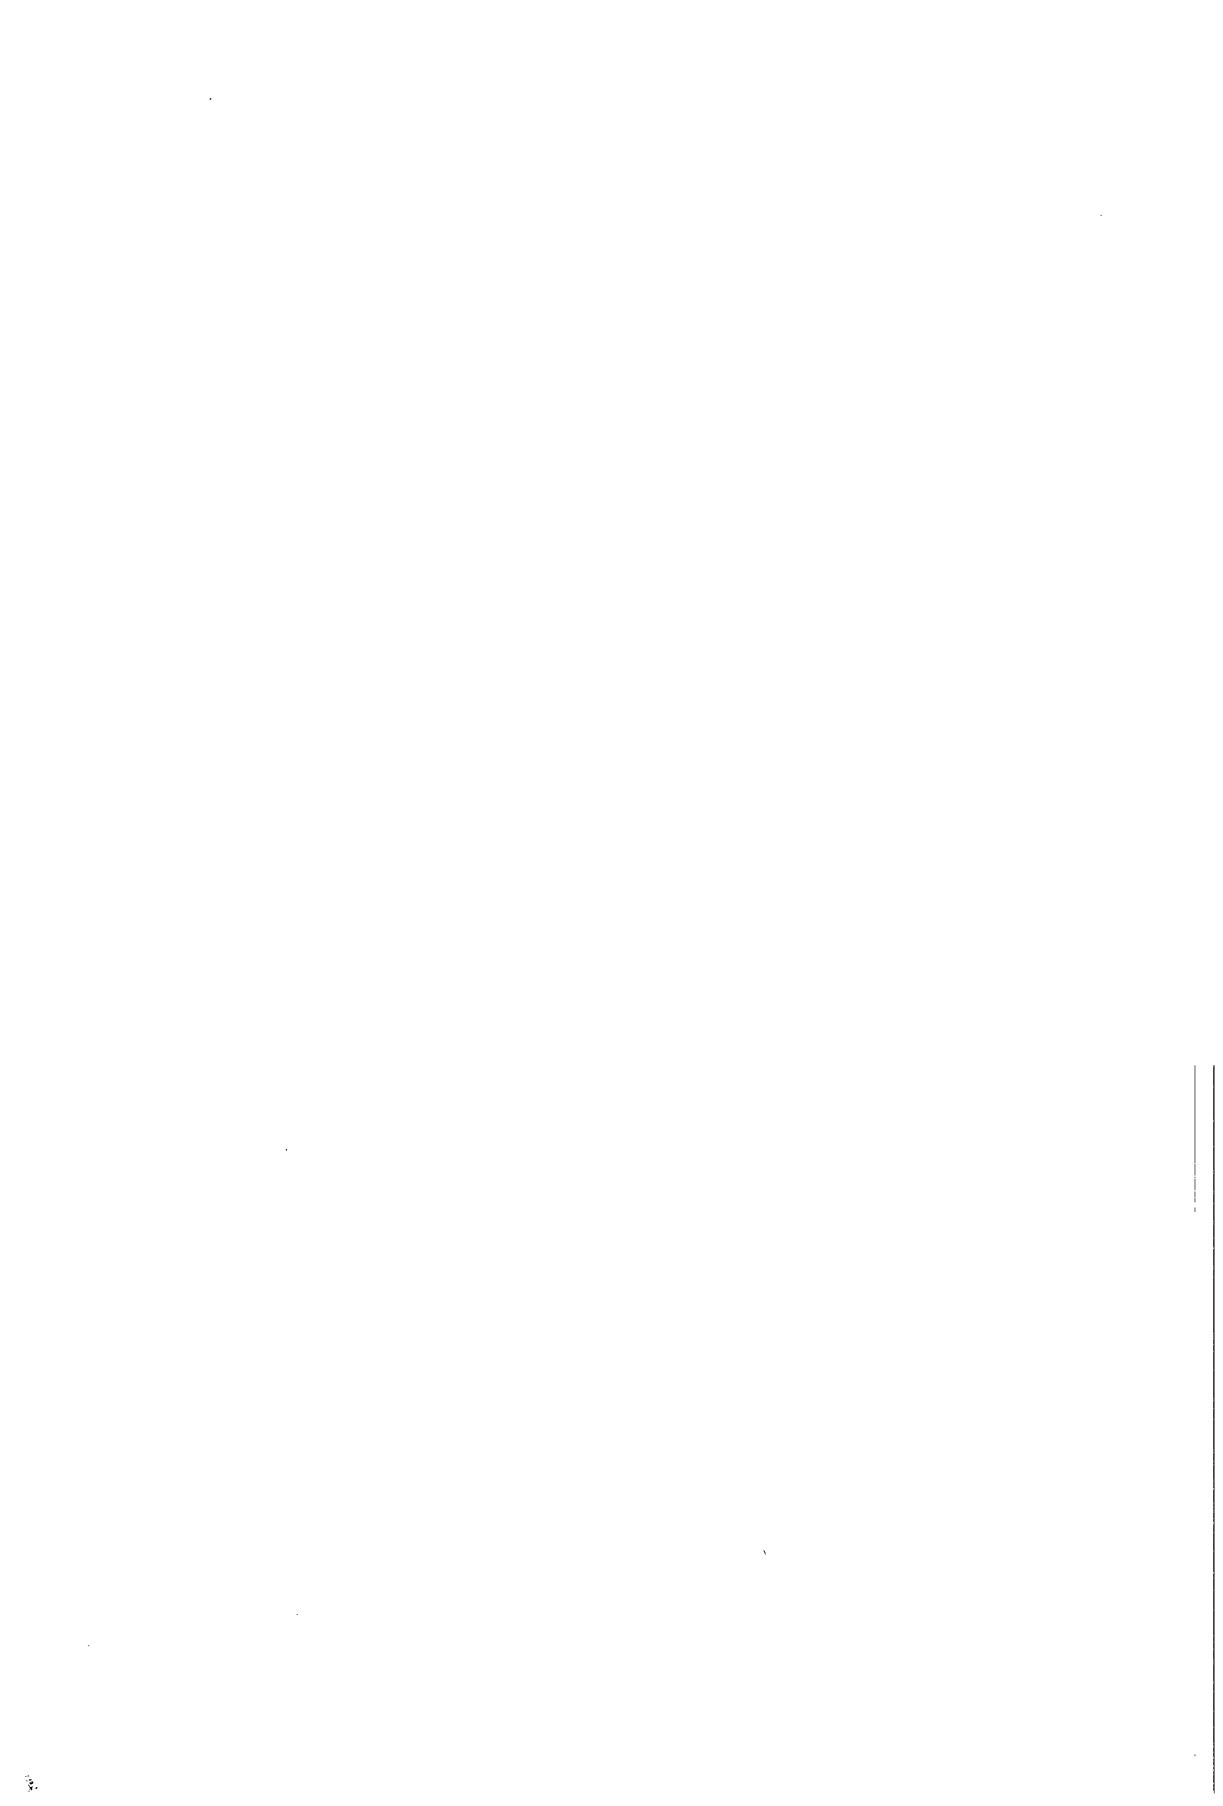

<i>cajón</i>	>	<i>kajo, kajoya</i>	'drawer'
<i>contestón</i>	>	<i>kontesto, kontestoya</i>	'rebellious'
<i>peatón</i>	>	<i>peato, peatoya</i>	'pedestrian'
<i>lamparón</i>	>	<i>lanparo, lanparoya</i>	'grease stain'
<i>avión</i>	>	<i>abio, abioya</i>	'airplane'

Another process that has a certain degree of productivity in the adaptation of borrowings is the affrication of sibilants (cf. section 2.2.3); e.g.: *baloncesto* > *balontzésto* 'basketball'.

Epenthesis before word-initial rhotics, which can be observed in a great number of borrowings (e.g.: Sp. *recreo* > *errekréo* 'recess'), has ceased to be productive (see lexicon under *R*).

As for accentuation, Spanish paroxytones and proparoxytones are generally adapted as accented words (i.e. with prominence on the penultimate); e.g.: Sp. *ánimo* > *anímo, animúa* 'courage', Sp. *bigote* > *bigóte, bigotía*, and Spanish oxytones are always treated as unaccented; e.g.: *fusil* > *fusill, fusilla* 'rifle'. Some young speakers preserve antepenultimate accentual prominence in Spanish proparoxytones when uninflected, placing the accent on the penultimate when inflection is added; e.g.: *polítiko, politikúa* (instead of *politíko, politikúa*). Spanish proparoxytones are unexceptionally adapted as accented words. On the other hand, not all paroxytones are adapted as accented. Interestingly, there are groups of Spanish paroxytones bearing certain endings which are systematically adapted as unaccented. For instance, adjectives in *-oso* are always unaccented, (211a). Spanish words bearing the agentive derivational suffix *-ero* are almost unexceptionally unaccented, (211b), whereas those bearing the homophonous place suffix are treated as accented, (211c):

- (211) a. *animoso, enbidioso, famoso, kontajioso, koploso, kurioso, lujoso, mañoso, mimoso, nerbiioso, orgulloso, peligroso, seloso, tranposo.*
- b. *atunero, bankero, karnasero, kartero, konsejero, kosiñero, miñero, mislonero, obrero, pastelero, peskadero, sapatero, serrajero, posadero, tesorero, torero, txurrero.*
- c. *labadéro, letréro, matadéro, pertxéro, sonbréro, trastéro, gallinéro.*

3. MORPHOLOGY

3.1. Nominal inflection. Structure of the noun phrase

In Basque, in general, adjectives follow the noun and only the last word in the noun phrase carries inflection:

- (1) *lagun-ari* 'to the friend, dat'
lagun andi-žari 'to the great friend, dat'
lagun andi bat-eri 'to a great friend, dat'

An exception is that forms carrying the genitive or the so-called genitive locative (or relational) suffix can appear within a larger noun phrase. This is in cases where a noun takes a noun phrase or postpositional phrase as its complement, since complements precede their heads:

- (2) *lagun-aren etxe-ra* 'to the house of the friend, all'
friend.G house.AL
etxe-ko žawi-a 'the owner of the house, abs'
house,GL owner.A
Ondarru-rá-ko autobus-a 'the bus bound for Ondarroa'
Ond.AL,GL bus.A

Nominal complements to the left of the head noun may also bear the suffix *-dun* 'having':¹

- (3) *žake gorri-dun mutill-a* 'the boy with a red jacket'
jacket red.having boy.A

Ordinal numerals are also prenominal:

- (4) *lau-gárren urti-an* 'in the fourth year'
four-th year-IN

Relative clauses also occur to the left of the noun (cf. section 4.5.2):

(1) The example in the text consists of a noun modified by a noun phrase complement with the suffix *-dun*. Modifiers with this suffix may also be regular adjectives, in which case they will follow the noun as in *gixon bixardúna* 'the bearded man' or *neska dirudúna* 'the wealthy girl'.

Nationality and other geographic adjectives, which may be preposed to the noun in some dialects, are postposed to the noun in Lekeitio, like any other adjectives: *gixon gernikárra* 'the Gernikan man', *bárku frantzeza* 'the French ship'.

- (5) *ikusi* *dot-en* *gixon-a* 'the man that I have seen'
 see AUX-REL man. A

The numeral and indefinite article *bat* ‘one, a’ follows the noun and any accompanying adjectives, in all Basque dialects. In Biscayan Basque, the numeral *bi* ‘two’ is also postnominal. Higher numbers precede the noun:

- (6) *gixon bi* ‘two men’ *iru gixon* ‘three men’

The number 'one', *bat*, also functions as an indefinite article. It may be noticed that in Lekeitio *bat* constitutes a separate prosodic word from the noun or adjective to its left (unlike in other dialects). This can be concluded from accentual facts. Consider the following examples:

- (7) *libúru* ‘book’ *liburúa* ‘the book’ *libúru bat* ‘a book’

As shown, the lexical accent of *libúru* moves one syllable to the right when the definite determiner /-a/ is added, to remain in penultimate position (cf. section 2.8.1). The numeral/article *bat*, on the other hand, does not affect the position of the accent, showing that it is not included in the same prosodic word.²

In other Basque dialects, demonstratives follow the noun and any adjectives, occurring in phrase-final position. In Biscayan Basque, however, demonstratives precede the noun and may also be repeated phrase-finally:

- (8) *au etxia / au etxianu* ‘this house’

In Biscayan Basque, demonstratives constitute another exception to phrase-final inflection, since they occur in an inflected form in prenominal position. In the example in (9) both the prenominal demonstrative and the last word in the phrase carry dative singular inflection:

- (9) *areri lagun andižari* ‘to that great friend, dat’
 that-D friend great-D

There is a morphological distinction between indefinite and definite inflected nominals. In their turn, definite forms are marked for singular or plural number. A further distinction is made in the plural between proximative and non-proximative forms:

- | | | |
|------|------------|-------------|
| (10) | indefinite | definite |
| | | / \ . |
| | singular | plural |
| | | / \ . |
| | unmarked | proximative |

(2) On the other hand, the accentual facts of Souletin show that in this dialect *bat* forms part of the same accentual unit as the noun it modifies. In Souletin the unmarked accentual pattern is penultimate: *gizun* 'man', *gizúna* 'the man' and *gizún-bat* 'a man'.

3.1.1. Nonlocative cases

In the following tables, examples are given of stems ending in a consonant, in each of the five vowels and in diphthongs. Both unaccented and accented stems (/leku*/ /belarri*) are included.

Absolutive. The absolute indefinite is identical to the uninflected stem. The definite forms carry an ending which is /-a/ in the singular, /-ak*/ in the plural and /-ok*/ in the plural proximate. Consonant-final stems do not require more comment. Stems ending in a mid vowel /e/, /o/ show the application of a rule which raises the stem-final vowel to high before another vowel (mid vowel raising, cf. section 2.6.1). Stems ending in /i/ present insertion of the prepalatal voiced fricative before another vowel (ž-epenthesis, cf. section 2.6.2). Stems ending in /u/ do not undergo any special rules. A peculiarity of all Biscayan and some western Gipuzkoan varieties is that stems ending in /-a/ show the application of different rules in the singular and the plural. In the plural, stem-final /-a/ is deleted prevocalically. In the singular, stem-final /-a/ is raised, instead; to [e] in the most conservative varieties (e.g. Arratia, Zeberio) and to [i] in Lekeitio (cf. section 2.7.1):

(11) Absolutive

indefinite	singular	plural	plural prox.	
<i>gixon</i>	<i>gixona</i>	<i>gixónak</i>	<i>gixónok</i>	'man'
<i>neska</i>	<i>neskia</i>	<i>néskak</i>	<i>néskok</i>	'girl'
<i>etxe</i>	<i>etxia</i>	<i>etxiák</i>	<i>etxiók</i>	'house'
<i>mendi</i>	<i>mendiža</i>	<i>mendižak</i>	<i>mendízok</i>	'mountain'
<i>baso</i>	<i>basua</i>	<i>basúak</i>	<i>basúok</i>	'forest'
<i>buru</i>	<i>burua</i>	<i>burúak</i>	<i>burúok</i>	'head'
<i>léku</i>	<i>lekúa</i>	<i>lekúak</i>	<i>lekúok</i>	'place'
<i>belárri</i>	<i>belarriža</i>	<i>belarrižak</i>	<i>belarrižok</i>	'ear'
<i>bei</i>	<i>beiža</i>	<i>béižak</i>	<i>béižok</i>	'cow'
<i>morau</i>	<i>morawa</i>	<i>moráwak</i>	<i>moráwok</i>	'purple'

The absolute case is used for intransitive subjects and for direct objects:

- | | |
|------------------------------|------------------------------|
| (12) <i>gixonâ etorri da</i> | (13) <i>gixonâ ikusi dot</i> |
| man.A come AUX | man.A see AUX |
| 'the man has come' | 'I have seen the man' |

Nominal predicates in copulative constructions are also inflected in the absolute case:

- (14) *Péru nire laguna dâ*
 Peru.A my friend. A is
 'Peru is my friend'

Ergative. Ergative plural and plural proximate forms are identical to those found in the absolute; whereas, in the ergative indefinite and singular, a final /-k/ is added to the absolute forms. If we take the endings that appear in the absolute

to be number morphemes (the absolutive case per se lacking any overt marker), the ergative morpheme can be taken to be /-k/ added after the number morpheme. The addition of this ending would lack phonetic realization when added to forms already ending in /k/ (e.g. /gixon-*ak-k/ *gixónak*), which causes plural and plural proximative forms to be identical on the surface in the absolutive and ergative. In the indefinite, a vowel /e/ is epenthized after a consonant or glide and optionally the sequence /-re-/ is inserted after a high front vocoid:

(15) Ergative

indefinite	singular	plural	plural prox.	
<i>gixonek</i>	<i>gixonak</i>	<i>gixónak</i>	<i>gixónok</i>	'man'
<i>neskak</i>	<i>neskiak</i>	<i>néskak</i>	<i>néskok</i>	'girl'
<i>etxek</i>	<i>etxiak</i>	<i>etxiák</i>	<i>etxiók</i>	'house'
<i>mendi(re)k</i>	<i>mendižak</i>	<i>mendížak</i>	<i>mendížok</i>	'mountain'
<i>basok</i>	<i>basuak</i>	<i>basúak</i>	<i>basúok</i>	'forest'
<i>buruk</i>	<i>buruak</i>	<i>burúak</i>	<i>burúok</i>	'head'
<i>lékuk</i>	<i>lekúak</i>	<i>lekúák</i>	<i>lekúok</i>	'place'
<i>bei(re)k</i>	<i>beížak</i>	<i>béížak</i>	<i>béížok</i>	'cow'
<i>morau(e)k</i>	<i>morawak</i>	<i>moráwak</i>	<i>moráwok</i>	'purple'

Transitive subjects are inflected in the ergative case:

- (16) *gixonak liburúa erosi dau*
 man.E book.A buy AUX
 'the man has bought the book'

Dative. If we assume that the dative suffix is added to forms that are identical to those which surface in the absolutive, the dative morpheme can be taken to be /-ri/ in all forms. In the indefinite, there is epenthesis of [e] after stem-final consonants: /gixon-ri/ *gixoneri*; but not after a front glide. In the plural and plural proximative, the final /-k/ of the number marker is deleted instead: /gixon-ak*-ri/ *gixonári*. In both the ergative and the dative, a sequence of consonants in the concatenation of number and case morphemes is broken by deletion: /ak-k/ [ak], /ak-ri/ [ari]. It can be noticed that when a sequence of two consonants arises between the stem and a case suffix, instead, a rule of epenthesis applies. Alternatively, different suffixes, added directly to the stem, can be postulated for each of the numbers: /-ri/, /-ari/, /-ari*/ and /-ori*/:

(17) Dative

indefinite	singular	plural	plural prox.	
<i>gixoneri</i>	<i>gixonari</i>	<i>gixonári</i>	<i>gixonóri</i>	'man'
<i>neskari</i>	<i>neskiari</i>	<i>neskári</i>	<i>neskóri</i>	'girl'
<i>etxeri</i>	<i>etxiari</i>	<i>etxiári</i>	<i>etxióri</i>	'house'
<i>mendiri</i>	<i>mendižari</i>	<i>mendížári</i>	<i>mendížóri</i>	'mountain'
<i>basori</i>	<i>basuari</i>	<i>basuári</i>	<i>basuóri</i>	'forest'
<i>bururi</i>	<i>buruari</i>	<i>buruári</i>	<i>buruóri</i>	'head'

<i>lekúri</i>	<i>lekuári</i>	<i>lekuári</i>	<i>lekuóri</i>	'place'
<i>beiri</i>	<i>beižari</i>	<i>beižári</i>	<i>beižóri</i>	'cow'
<i>moraweri</i>	<i>morawari</i>	<i>morawári</i>	<i>morawóri</i>	'purple'

The main use of the dative is to mark the indirect object:

- (18) *gixonak liburúa emon dotzo neskiari*
 man.E book.A give AUX girl.D
 'the man has given the book to the girl'

Human direct objects are often inflected in the dative as well. The two sentences in (19) are equivalent:

- (19) a. *sure lagunā ikusi dot*
 your friend.A see AUX
 b. *sure lagunari ikusi dotzat*
 your friend.D see AUX
 'I have seen your friend'

The dative is also used to indicate possession, as in Spanish:

- (20) *kendúixu sonbrerúa umiari*
 take off-AUX hat.A child.D
 'take off the child's hat' (lit. 'take off the hat to the child')

 (21) *gixonak adárrak ebagi eutzasan beižari*
 man.E horns.A cut AUX cow.D
 'the man cut the cow's horns'

Also as in Spanish, certain pseudo-impersonal intransitive verbs take a dative argument (arguably the 'logical' subject):

- (22) *gixonari es-žakô dirurik gerátzen*
 man.D not-AUX money.PT remain.I
 'the man does not have any money left'³

Genitive. The definite genitive forms (singular and plural) are straightforward. The suffixes can be taken to be singular /-en/, plural /-en*/ and plural proximative /-on*/ added directly to the stem. The same rules apply as in other cases before. The indefinite forms are less straightforward. It is possible to postulate an indefinite suffix /-n/, which triggers epenthesis of /-re-/ after /i/ and of /-e-/ after a consonant or back glide. In addition, singular genitive forms are optionally used instead of the indefinite forms given:

- (23) Genitive
- | indefinite | singular | plural | plural prox. | |
|-------------------|-----------------|-----------------|-----------------|------------|
| <i>gixonen</i> | <i>gixonen</i> | <i>gixónen</i> | <i>gixónon</i> | 'man' |
| <i>neskan</i> | <i>neskien</i> | <i>nésken</i> | <i>néskon</i> | 'girl' |
| <i>etxen</i> | <i>etxien</i> | <i>etxíen</i> | <i>etxión</i> | 'house' |
| <i>mendi(re)n</i> | <i>mendižen</i> | <i>mendížen</i> | <i>mendižon</i> | 'mountain' |

(3) Sp. 'al hombre no le queda dinero'.

<i>bason</i>	<i>basuen</i>	<i>basúen</i>	<i>basúon</i>	'forest'
<i>burun</i>	<i>buruen</i>	<i>burúen</i>	<i>burúon</i>	'head'
<i>lékun</i>	<i>lekúen</i>	<i>lekúen</i>	<i>lekúon</i>	'place'
<i>beiren</i>	<i>beižen</i>	<i>béižen</i>	<i>béižon</i>	'cow'
<i>morawen</i>	<i>morawen</i>	<i>moráwen</i>	<i>moráwon</i>	'purple'

Other varieties (e.g. Markina, Oñati) have a difference in vowel quality between the singular and the plural; e.g.: sg. *gixonan*, pl. *gixónen*. Yet other varieties have [a] in both the singular and the plural (Gernika, Getxo, Zeberio); e.g.: sg. *gixonan*, pl. *gixónan*; but [e] in both numbers when the vowel in the final syllable of the stem is [i,u] (due to a rule of low vowel assimilation): sg. *lagunen*, pl. *lagúnen*.

The genitive is the case of the possessor noun phrase:

- (24) *au es-tâ txakurren etxia, katûen etxia da*
 this not-is dog.G house.A cats.G house.A
 'this is not the dog's house, it's the house of the cats'

The genitive may be followed by other inflectional suffixes:

Benefactive. The benefactive is formed by adding */-tzat/* or */-tzat-ko/* *-tzako* to the genitive:

(27) Benefactive

indefinite	singular	plural	plural prox.	
<i>gixonentzat</i> /	<i>gixonentzat</i> /	<i>gixonéntzat</i> /	<i>gixonóntzat</i> /	'man'
<i>gixonentzako</i>	<i>gixonentzako</i>	<i>gixonentzáko</i>	<i>gixonontzáko</i>	
<i>neskantzat</i>	<i>neskientzat</i>	<i>neskéntzat</i>	<i>neskóntzat</i>	'girl'
<i>etxentzat</i>	<i>etxientzat</i>	<i>etxiéntzat</i>	<i>etxióntzat</i>	'house'
<i>mendi(re)ntzat</i>	<i>mendižentzat</i>	<i>mendižéntzat</i>	<i>mendižóntzat</i>	'mountain'
<i>basantzat</i>	<i>basuuentzat</i>	<i>basuéntzat</i>	<i>basuóntzat</i>	'forest'
<i>buruntzat</i>	<i>buruuentzat</i>	<i>buruéntzat</i>	<i>buruóntzat</i>	'head'
<i>lekúntzat</i>	<i>lekuéntzat</i>	<i>lekuéntzat</i>	<i>lekuóntzat</i>	'place'
<i>beirentzat</i>	<i>beižentzat</i>	<i>beižéntzat</i>	<i>beižóntzat</i>	'cow'
<i>morawentzat</i>	<i>morawentzat</i>	<i>morawéntzat</i>	<i>morawóntzat</i>	'purple'

The benefactive forms in *-tzako* can be used both modifying a noun and independently; those in *-tzat* only in independent arguments:

- (28) *lagunêntzat da / lagunentzâko da*
 'it is for the friends'

- (29) a. *lagunentzako erregaluiak ekarri-ditxus*
 friends.B presents.A bring-AUX
 's/he has brought [presents for the friends]'

- b. *lagunenzáko/lagunéntzat erregalûak ekarri-ditxus*
 'for the friends, s/he has brought presents'

Comitative. To form the comitative, the accentually marked suffix */-gas*/* is added directly to the stem in the indefinite (with epenthesis of [e] after a consonant) and to the stem plus number marker in the singular. The */g/* of this suffix is often deleted. In the plural and plural proximative a different suffix, which we may represent as */-in/* is added after the number marker */-ak*/*, */-ok*/*:

(30) Comitative

indefinite	singular	plural	plural prox.	
<i>gixoné(g)as</i>	<i>gixoná(g)as</i>	<i>gixonákiñ</i>	<i>gixonókiñ</i>	'man'
<i>neská(g)as</i>	<i>neskiá(g)as</i>	<i>neskákiñ</i>	<i>neskókiñ</i>	'girl'
<i>etxé(g)as</i>	<i>etxiá(g)as</i>	<i>etxiákiñ</i>	<i>etxiókiñ</i>	'house'
<i>mendí(g)as</i>	<i>mendižá(g)as</i>	<i>mendižákiñ</i>	<i>mendižókiñ</i>	'mountain'
<i>basó(g)as</i>	<i>basuá(g)as</i>	<i>basuákiñ</i>	<i>basuókiñ</i>	'forest'
<i>burú(g)as</i>	<i>buruá(g)as</i>	<i>buruákiñ</i>	<i>buruókiñ</i>	'head'
<i>leku(g)as</i>	<i>lekuá(g)as</i>	<i>lekuákiñ</i>	<i>lekuókiñ</i>	'place'
<i>béi(g)as</i>	<i>bežá(g)as</i>	<i>bežákiñ</i>	<i>bežókiñ</i>	'cow'
<i>moráu(g)as</i>	<i>morawá(g)as</i>	<i>morawákiñ</i>	<i>morawókiñ</i>	'purple'
<i>morawé(g)as</i>				

These forms are used both with comitative and instrumental complements:

- (31) *lagunákiñ dator*
 friends.C s/he-comes
 's/he is coming with the friends'
- (32) *boligráfo morawágas eskribidu-dau*
 ballpen purple.Cs write AUX
 's/he has written it with the purple ballpen'

From an interdialectal perspective, we may notice that in Gipuzkoan and eastern dialects the comitative takes an ending *-kin*, generally added to the genitive, in all numbers: *gizona(re)kin* 'with the man', *gizonekin* 'with the men'. In western Biscayan varieties, on the other hand, the comitative/instrumental takes the suffix *-gas* added to absolute forms both in the singular and the plural. Thus, in Getxo we find *gisoná(g)as* 'with the man', *gisonakas* 'with the men' (Hualde & Bilbao 1992: 55). In the Gernika area *gixonágas* is used in the singular, as in Lekeitio, whereas in the plural *gixónakas* and *gixónakiñ* are found in free variation.

Instrumental. In Non-Biscayan dialects as well as in Standard Basque, an instrumental case, which takes a suffix *-z* (*-s* in some Navarrese varieties), is distinguished from the comitative; e.g.: *eskuaz* 'by means of the hand', *eskuez* 'by means of the hands'. In Lekeitio there are remnants of this case in expressions such as *soritxarrer* 'unfortunately, by bad luck', *burus* 'by heart', lit. 'by head' (as in *burus dakitt* 'I know it by heart') and with names of languages, e.g.: *euskéras* 'in Basque', *biskayéras* 'in Biscayan Basque', *erdéras* 'in Spanish'. The instrumental suffix */-s/* also appears

together with the relational /-ko/ in the suffix /-s-ko/ which indicates the material of which something is made as in /seda*-s-ko/ *sedásko* 'silken, made of silk', *sidarresko* 'made of silver', etc.

Partitive. In the partitive there are no number distinctions. Consonant-final stems take an ending *-ik* and vowel (and glide)-final bases take *-rik*.

(33) Partitive

indefinite

<i>gixonik</i>	'man'	<i>bururik</i>	'head'
<i>neskarik</i>	'girl'	<i>lekúrik</i>	'place'
<i>etxerik</i>	'house'	<i>beirik</i>	'cow'
<i>mendirik</i>	'mountain'	<i>moraurik</i>	'purple'
<i>basorik</i>	'forest'		

As Azkue (1932: 10) notes, the partitive morpheme is unaccented when suffixed to an argument of the verb, but accented when suffixed to a noun in the superlative construction:⁴

- (34) *es-tôt gixonik ikusi*
not-AUX man.P see
'I have not seen any men'

- (35) *gixónik ederréna*
man.P most beautiful.A
'the most beatiful man'

Prolative. In the prolative the suffix *-tzat* is added directly to the stem:

(36) Prolative

<i>gixontzat</i>	'man'	<i>burutzat</i>	'head'
<i>neskatzat</i>	'girl'	<i>lekútzat</i>	'place'
<i>etxetzat</i>	'house'	<i>beitzat</i>	'cow'
<i>menditzat</i>	'mountain'	<i>morautzat</i>	'purple'
<i>basotzat</i>	'forest'		

The prolative is used in expressions such as 'to take (someone) for something'. There are no number distinctions in the prolative:

- (37) *gixontzât artun-neban*
'I took him for a man'

- (38) *gixontzât artun-nebasan*
'I took them for men'

3.1.2. Locative cases

The locative cases constitute a special subparadigm. The distinguishing characteristic is that the most basic form appears to be the singular, whereas both the

(4) This accentual distinction is also made in the variety of Gernika, but it may not obtain in other varieties. Michelena (1985: 577) manifests that there is no such distinction: "Es ilusorio tratar de distinguir con Azkue... el suf. -(r)ik 'tórico' de *gizonik etxago* 'no hay hombres' del 'átono' de *gizonik onenâ...*". It should be noted that an 'atonic suffix' in Azkue's terminology is one that receives a low tone, and thus corresponds to an accented suffix in our terms. Correspondingly, 'tonic suffixes' are unaccented ones (i.e. do not induce a drop in pitch). Greater progress in the study of Basque accentuation would have been possible had Azkue clearly stated, here as elsewhere, that his description corresponded to the accentual system of his native variety of Lekeitio.

indefinite and the plural carry a suffix before the case marker: indefinite /-ta/, plural /-e*-ta/, plural proximative /-o*-ta/.

Inesive ('place at'). The inesive singular carries a suffix /-an/. As in most Basque dialects, this suffix has the irregular property of triggering the appearance of an epenthetic vowel (/e/ raised to [i] by mid vowel raising) after consonant-final stems. This is shown in the inesive singular of *ixar* 'star' which is *ixarrian* (comparable to Standard Basque *izarrean*), not **ixarran*, as would be expected (cf. Jacobsen 1977 for an analysis of this phenomenon). Stems ending in a low vowel show the same type of deletion as in the nonlocative plural: /orma-an/ *orman*, /orma-o*-tan/ *ormótan*. Other sequences of vowels are treated in familiar ways (i.e. by application of mid vowel raising and ž-insertion).

The same suffix /-an/ can be assumed to appear in the indefinite, plural and plural proximative after the suffixes /-ta/, /-e*-ta/ and /-o*-ta/, respectively. In the indefinite, the suffix /-ta/ is often optional or not used:

(39) Inesive

indefinite	singular	plural	plural prox.	
<i>ixarretan</i>	<i>ixarrian</i>	<i>ixarrétan</i>	<i>ixarrótan</i>	'star'
<i>orma(ta)n</i>	<i>orman</i>	<i>ormétan</i>	<i>ormótan</i>	'wall'
<i>etxetan</i>	<i>etxian</i>	<i>etxiétan</i>	<i>etxiótan</i>	'house'
<i>mendi(ta)n</i>	<i>mendižan</i>	<i>mendižétan</i>	<i>mendižótan</i>	'mountain'
<i>baso(ta)n</i>	<i>basuan</i>	<i>basuétan</i>	<i>basuótan</i>	'forest'
<i>buru(ta)n</i>	<i>buruan</i>	<i>buruétan</i>	<i>buruótan</i>	'head'
<i>lekútan</i>	<i>lekúan</i>	<i>lekuétan</i>	<i>lekuótan</i>	'place'
<i>máittan</i>	<i>máižan</i>	<i>maižétan</i>	<i>maižótan</i>	'table'
<i>maižátan</i>				
<i>kata(ta)n</i>	<i>katayan</i>	<i>katayétan</i>	<i>katayótan</i>	'chain'
<i>morau(ta)n</i>	<i>morawan</i>	<i>morawétan</i>	<i>morauótan</i>	'purple'

Allative ('place to'). The allative suffix is /-ra/. Regularly for a consonant-initial suffix, the vowel [e] is epenthesized with consonant-final stems.

(40) Allative

indefinite	singular	plural	plural prox	
<i>ixarre(ta)ra</i>	<i>ixarrera</i>	<i>ixarretára</i>	<i>ixarrotára</i>	'star'
<i>orma(ta)ra</i>	<i>ormara</i>	<i>ormetára</i>	<i>ormotára</i>	'wall'
<i>etxetara</i>	<i>etxera</i>	<i>etxietára</i>	<i>etxiótára</i>	'house'
<i>mendira</i>	<i>mendira</i>	<i>mendižetára</i>	<i>mendižotára</i>	'mountain'
<i>baso(ta)ra</i>	<i>basora</i>	<i>basuetára</i>	<i>basuotára</i>	'forest'
<i>buru(ta)ra</i>	<i>burura</i>	<i>buruetára</i>	<i>buruotára</i>	'head'
<i>lekutára</i>	<i>lekúra</i>	<i>lekuétára</i>	<i>lekuótára</i>	'place'
<i>lekúra</i>				
<i>máira</i>	<i>máira</i>	<i>maižetára</i>	<i>maižotára</i>	'table'
<i>katara</i>	<i>katara</i>	<i>katajetára</i>	<i>katayotára</i>	'chain'

<i>morawera</i>	<i>moraúra</i>	<i>morawetára</i>	<i>morawotára</i>	'purple'
	<i>morawera</i>			

Directional ('place towards'). There are two directional suffixes suffix /-rutz/ and /-ratz/, which are in free variation for all stems; e.g.: *etxerutz* ~ *etxeratz* 'towards the house'.

(41) Directional

indefinite	singular	plural	plural prox.	
<i>ixarre(ta)rutz</i>	<i>ixarrerutz</i>	<i>ixarretárutz</i>	<i>ixarrotárutz</i>	'star'
<i>ixarre(ta)ratz</i>	<i>ixarreratz</i>	<i>ixarretáratz</i>	<i>ixarrotáratz</i>	
<i>ormarutz</i>	<i>ormarutz</i>	<i>ormetárutz</i>	<i>ormotárutz</i>	'wall'
<i>etxe(ta)rutz</i>	<i>etxerutz</i>	<i>etxietárutz</i>	<i>etxiotárutz</i>	'house'
<i>mendirutz</i>	<i>mendirutz</i>	<i>mendižetárutz</i>	<i>mendižotárutz</i>	'mountain'
<i>basorutz</i>	<i>basorutz</i>	<i>basuetárutz</i>	<i>basuotárutz</i>	'forest'
<i>bururutz</i>	<i>bururutz</i>	<i>buruetárutz</i>	<i>buruotárutz</i>	'head'
<i>lekutártuz</i>	<i>lekúrtuz</i>	<i>lekuetárutz</i>	<i>lekuotárutz</i>	'place'
<i>máirutz</i>	<i>máirutz</i>	<i>maižetárutz</i>	<i>maižotárutz</i>	'table'
<i>katarutz</i>	<i>katarutz</i>	<i>katayetárutz</i>	<i>katayotárutz</i>	'chain'
<i>moraúrutz</i>	<i>moraúrutz</i>	<i>morawetárutz</i>	<i>morawotárutz</i>	'purple'
<i>morawerutz</i>	<i>morawerutz</i>			

Ablative ('place from'). The ablative suffix is /-tik*/-, with epenthesis of [e] after consonant-final stems. Adverbs carrying this suffix do not present epenthesis after a stem-final sonorant: *amen* 'here', *améndik* 'from here', or 'there', *órtik* 'from there' (cf. Section 2.7.3). The ablative /-tik*/- is one of the only two nonplural inflectional suffixes which are accented (the other one is the comitative /-gas*/-). In the indefinite, the suffix /-ta-/ is not generally used. Indefinite forms are thus identical to singular forms in most instances:

(42) Ablative

indefinite	singular	plural	plural prox.	
<i>ixarretátik</i>	<i>ixarréтик</i>	<i>ixarretátik</i>	<i>ixarrotátik</i>	'star'
<i>ixarréтик</i>				
<i>ormátik</i>	<i>ormáтик</i>	<i>ormetátik</i>	<i>ormotátik</i>	'wall'
<i>etxetátik</i>	<i>etxéтик</i>	<i>etxietátik</i>	<i>etxiotátik</i>	'house'
<i>etxéтик</i>				
<i>mendítik</i>	<i>mendíтик</i>	<i>mendižetátik</i>	<i>mendižotátik</i>	'mountain'
<i>basótik</i>	<i>basóтик</i>	<i>basuetátik</i>	<i>basuotátik</i>	'forest'
<i>burútik</i>	<i>burúтик</i>	<i>buruetátik</i>	<i>buruotátik</i>	'head'
<i>lekutáttik</i>	<i>lekúтик</i>	<i>lekuetátik</i>	<i>lekuotátik</i>	'place'
<i>lekúтик</i>				
<i>máittik</i>	<i>máиттик</i>	<i>maižetátik</i>	<i>maižotátik</i>	'table'
<i>kataíttik</i>	<i>katáтик</i>	<i>katayetátik</i>	<i>katayotátik</i>	'chain'
<i>kataíтик</i>				

<i>moráutik</i>	<i>moráutik</i>	<i>morawetátik</i>	<i>morawotátik</i>	'purple'
<i>morawétik</i>	<i>morawétik</i>			

Genitive locative/ relational suffix. The genitive locative is marked by the suffix */-ko/*, with epenthesis of [e] after consonant-final stems, except in adverbs as was mentioned for the ablative (*amengo* 'of here', *orko* 'of there'):

(43) Genitive locative

indefinite	singular	plural	plural prox.	
<i>ixarretako</i>	<i>ixarreko</i>	<i>ixarretáko</i>	<i>ixarrotáko</i>	'star'
<i>ormatako</i>	<i>ormako</i>	<i>ormetáko</i>	<i>ormotáko</i>	'wall'
<i>etxeiako</i>	<i>etxeko</i>	<i>etxietáko</i>	<i>etxiotáko</i>	'house'
<i>mendi(tta)ko</i>	<i>mendiko</i>	<i>mendižetáko</i>	<i>mendižotáko</i>	'mountain'
<i>baso(ta)ko</i>	<i>basoko</i>	<i>basuetáko</i>	<i>basuotáko</i>	'forest'
<i>buruko</i>	<i>buruko</i>	<i>buruetáko</i>	<i>buruotáko</i>	'head'
<i>lekutáko</i>	<i>lekúko</i>	<i>lekuetáko</i>	<i>lekuotáko</i>	'place'
<i>máiko</i>	<i>máiko</i>	<i>maižetáko</i>	<i>maižotáko</i>	'table'
<i>katako</i>	<i>katako</i>	<i>katayetáko</i>	<i>katayotáko</i>	'bell'
<i>morauko</i>	<i>morauko</i>	<i>morawetáko</i>	<i>morawoíako</i>	'purple'

Although there are morphological reasons for including this suffix among the locative inflectional markers, the suffix */-ko/* has a wider use and is better understood as a relational affix (cf. de Rijk 1993). Thus, besides constructions such as (44)-(45), which illustrate the genitive locative usage, the suffix */-ko/* is also used in examples such as (46)-(48), where it serves the function of allowing a noun phrase or postpositional phrase to modify another nominal:

- | | |
|---|---|
| (44) <i>mendiko etxia</i>
'the house of the mountain' | (47) <i>bijotz oneko gixona</i>
'a man of good heart' |
| (45) <i>basuotáko arbólak</i>
'the trees of these forests' | (48) <i>amáiru urteko neska bat</i>
'a thirteen year old girl' |
| (46) <i>Aletiko žokalariža</i>
'the Athletic player' | |

The suffix */-ko/* may follow the allative suffix in prenominal modifiers:

- | | |
|---|--|
| (49) <i>Ondarruráko autobusa</i>
'the bus bound for Ondarroa'
(lit. 'of to Ondarroa') | <i>mendirako bidia</i>
'the path to the mountain' |
|---|--|

However, unlike in the literary dialect studied in de Rijk (1993), it cannot follow other inflectional suffixes. Like the (nonlocative) genitive, the suffix */-ko/* may also be followed by other suffixes:

- | |
|---|
| (50) <i>etxekúak</i>
'the ones of the house, the members of the household' |
| (51) <i>gure mendižetakuári orrižak žausi žákes</i>
lit. 'to those of our mountains, the leaves have fallen' |

3.1.3. Animate allative and other animate locative cases

Animate nouns form their allative with a suffix */-gana/* added to the absolute:

- (52) Animate allative (movement towards an animate)

indefinite	singular	plural
<i>neska(g)ana</i>	<i>neskia(g)ana</i>	<i>neskakána</i> 'girl'
<i>gixone(g)ana</i>	<i>gixona(g)ana</i>	<i>gixonakána</i> 'man'

Plural forms show an ending *-akána* which results from the simplification of the group */kg/* in the morphological sequence */-ak*-gana/*. Optionally, in the singular the ending *-gana* can be added after the genitive: *gixone(n)(g)ana* 'to the man'.

In the ablative, vowel-final stems referring to animates take the postposition *ándik*. Consonant final stems take the same endings as for inanimates:

- (53) Ablative (movement from an animate)

indefinite	singular	plural
a. <i>neskándik</i>	<i>neskiándik</i>	<i>néskak ándik</i> 'girl'
<i>neskátik</i>		
b. <i>gixonétik</i>	<i>gixonétik</i>	<i>gixonetátik</i> 'man'

There are no other forms for animate cases. Corresponding to the animate inessive of the standard language, the comitative is used with animates.

3.1.4. Special cases: stem-final diphthongs

Stems ending in a diphthong have been illustrated with the example */bei/* 'cow' whose paradigm is repeated in (54):

(54)		indefinite	singular	plural	plural prox.
	abs	<i>bei</i>	<i>beiža</i>	<i>béižak</i>	<i>béižok</i>
	erg	<i>bei(re)k</i>	<i>beižak</i>	<i>béižak</i>	<i>béižok</i>
	dat	<i>beiri</i>	<i>beižari</i>	<i>beižári</i>	<i>beižóri</i>
	gen	<i>beiren</i>	<i>beižen</i>	<i>béižen</i>	<i>béižon</i>
	ben	<i>beirentzat</i>	<i>beižentzat</i>	<i>beižéntzat</i>	<i>beižóntzat</i>
	com	<i>béi(g)as</i>	<i>beižá(g)as</i>	<i>beižákiñ</i>	<i>beižókiñ</i>
	part	<i>beirik</i>			
	prol	<i>beitzat</i>			

There are however other stems which also appear to end in a sequence of vocoids and which do not conform to this paradigm. There is a group of words whose stem appears to end in a vowel in indefinite forms but presents a final palatal glide in most singular and plural forms. This group includes a relatively large number of borrowings which in Spanish end in *-on*.⁵ An example is *patro/patroya* 'boss, captain of a fishing boat'. These stems can be understood as underlyingly ending in */-oe/*. The final */-e/* is deleted in the indefinite; otherwise raising and gliding (cf. section

(5) Cf. Hualde (1993c) for this correspondence in a number of Basque dialects.

2.6.5). The group also contains words such as *kata/kataya* 'chain', *gasta/gastaya* 'cheese' for which final underlying /-ae/ may be postulated:

(55)		indefinite	singular	plural	plural prox.

	<i>katayétik</i>				
<i>g-l</i>	<i>katako</i>	<i>katako</i>	<i>katayetáko</i>	<i>katayotáko</i>	

3.1.5. Demonstratives

The demonstratives present some peculiarities in their inflectional paradigm, as in other Basque dialects. There are three basic demonstratives, whose absolute forms are *au* 'this', *ori* 'that' and *a* 'that over there'. The distal demonstrative *a* is homophonous with the determiner. Their complete nonlocative paradigms are as follows:⁶

(56)		sing	plural	sing	plural	sing	plural
abs		<i>au</i>	<i>ónek</i>	<i>ori</i>	<i>órrek</i>	<i>a</i>	<i>árek</i>
erg		<i>onek</i>	<i>ónek</i>	<i>orrek</i>	<i>órrek</i>	<i>arek</i>	<i>árek</i>
dat		<i>oneri</i>	<i>néri</i>	<i>orreri</i>	<i>orréri</i>	<i>arerí</i>	<i>aréri</i>
gen		<i>onen</i>	<i>ónen</i>	<i>orren</i>	<i>órren</i>	<i>aren</i>	<i>áren</i>
ben		<i>onentzat</i>	<i>onéntzat</i>	<i>orrentzat</i>	<i>orréntzat</i>	<i>arentzat</i>	<i>aréntzat</i>
com		<i>onégas</i>	<i>onékiñ</i>	<i>orrégas</i>	<i>orrekiñ</i>	<i>arégas</i>	<i>arékiñ</i>

(6) The proative and partitive cases are not used with demonstratives.

The demonstratives in (56) can be used as pronouns (i.e. forming their own noun phrases) and as 'adjectives' (i.e. modifying a noun). In central and eastern Basque dialects, and in Standard Basque, adjectival demonstratives appear phrase-finally, after the noun they modify and any adjectives. In Lekeitio, as in many other Biscayan varieties, instead, demonstratives in their adjectival use appear in phrase-initial position, to the left of the noun. In noun phrases containing demonstratives, case inflection appears both on the demonstrative and phrase-finally (as in the left-column examples in (57)). An inflected suffixal copy of the demonstrative may also appear at the end of the phrase, as in the right-column examples. In some plural cases (genitive, benefactive and comitative), the phrase-initial demonstrative may be optionally left in its absolute/ergative form, whereas the noun (or adjective) inflects for the corresponding case:

(57) 'this child'

abs	<i>au umia</i>	<i>au umiau</i>
erg	<i>onek umiak</i>	<i>onek umioneak</i>
dat	<i>oneri umiari</i>	<i>oneri umioneri</i>
gen	<i>onen umien</i>	<i>onen umionen</i>
ben	<i>onentzat umientzat</i>	<i>onentzat umionentzat</i>
com	<i>oné(g)as umidá(g)as</i>	<i>oné(g)as umioné(g)as</i>

'these children'

abs	<i>ónek umiak/umíok</i>

gen	<i>órren/órrek umiéen/umión</i>	
ben	<i>orréntzat/órrek umiéntzat/-óntzat</i>	
com	<i>orrékiñ umiákiñ/-ókiñ</i>	<i>orrékiñ umiorrékiñ</i>

'that child over there'		'those children over there'	
abs	<i>a umia</i>	abs	<i>árek umiak</i>
erg	<i>arek umiak</i>	erg	<i>árek umiák</i>
dat	<i>areri umiari</i>	dat	<i>aréri umiári</i>
gen	<i>aren umien</i>	gen	<i>áren/árek umíen</i>
ben	<i>arentzat umientzat</i>	ben	<i>aréntzat/árek umiéntzat</i>
com	<i>aré(g)as umiá(g)as</i>	com	<i>arékiñ/árek umiákiñ</i>

Some examples with a noun phrase containing both a demonstrative and an adjective are shown in (58):

- (58) *au libíru gorrižau* 'this red book'
orrékiñ lagun andižákiñ / andižorrékiñ 'with those great friends'

For the proximative demonstrative, in addition to forms based on a root /on-/ , there are emphatic alternatives with a root /aun*-/. In these emphatic forms the first syllable is accented and behaves as an independent prosodic word in the singular. These forms alternate with unaccented forms. Plural forms receive penultimate accent:

(59)	singular	plural
abs	<i>au</i>	<i>áunek</i>
erg	<i>áunek ~ aunek</i>	<i>áunek</i>
dat	<i>áu-neri ~ aunerí</i>	<i>aunéri</i>
gen	<i>áu-nen ~ aulen</i>	<i>áunen</i>
gen+abs sg	<i>áu-nena ~ aunena</i>	<i>aunéna</i>
ben	<i>áu-nentzako ~ aunentzako</i>	<i>aunentzáko</i>
com	<i>áu-negas ~ aunégas</i>	<i>aunékiñ</i>

These emphatic forms can only be used as pronominal; that is, they cannot modify a noun:

- (60) *áu-nena da* 'it is the one of this one'
áu-neri 'to this one'
**gixon áu-nena da* 'it is the one of this man'
**gixon áu-neri* 'to this man'

The original locative forms of the demonstrative series have been lost in the singular. In singular noun phrases inflected for the locative cases, place adverbs are used in pronominal position (*amen* 'here', *or* 'there', *an* 'over there'). For all forms starting with *o-* there are alternative more emphatic forms with a diphthong *au-*, accented or unaccented. The declension of these adverbs is as follows; emphatic forms are listed after the corresponding non-emphatic variants:

(61) place adverbs	'here'	'there'	'over there'
ines	<i>amen</i>	<i>or, aur</i>	<i>an</i>
all	<i>ona, áuna</i>	<i>orra, aurra, áurra</i>	<i>ara</i>

abl	<i>améndik</i>	<i>órtik, áurtik</i>	<i>ándik</i>
gen-loc	<i>amengo</i>	<i>orko, aurko, áurko</i>	<i>ango</i>
dir	<i>onutz</i>	<i>orrutz</i>	<i>arutz</i>
	<i>onatz, aunatz, áunatz</i>	<i>orratz, aurratz, áurratz</i>	<i>aratz</i>
all+gen-loc	<i>onako, aunako, áunako</i>	<i>orrako, aurrako, áurrako</i>	<i>arako</i>

(62) Singular locative phrases with demonstratives

<i>amen etxian</i>	'in this house' (or 'here in the house')
<i>ona etxera</i>	'to this house'
<i>améndik etxétik</i>	'from this house'
<i>amengo etxekeo</i>	'of this house'
<i>onutz etxerutz</i>	'towards this house'
<i>or etxian</i>	'in that house'
<i>orra etxera</i>	'to that house'
<i>órtik etxétik</i>	'from that house'
<i>orko etxekeo</i>	'of that house'
<i>orrutz etxerutz</i>	'towards that house'
<i>an etxian</i>	'in that house over there'
<i>ara etxera</i>	'to that house over there'
<i>ándik etxétik</i>	'from that house over there'
<i>ango etxekeo</i>	'of that house over there'
<i>arutz etxerutz</i>	'towards that house over there'

In plural locative phrases, distinct plural demonstrative forms are used in the inessive, allative and partly in the ablative; in the remaining cases, adverbs are used, as in the singular, or the demonstrative appears in the absolutive/ergative plural:

(63) Plural locative phrases with demonstratives

<i>onétan etxiótan/-étan</i>	'in these houses'
<i>onétan etxionétan</i>	
<i>onetára etxiótáral/-etára</i>	'to these houses'
<i>onetára etxionetára</i>	
<i>onetátik etxiótátik/-etátik</i>	'from these houses'
<i>amengo etxiótákol/-etáko ~</i>	
<i>ónék etxiótákol/-etáko⁷</i>	'of these houses'
<i>ónék etxiótárutz/-etárutz</i>	'towards these houses'
<i>orretán etxiótan/-étan</i>	'in those houses'
<i>orretára etxiótáral/-etára</i>	'to those houses'
<i>orretátik etxiótátik/-etátik</i>	'from those houses'
<i>orko etxiótákol/-etáko ~</i>	
<i>órrek etxiótákol/-etáko</i>	'of those houses'
<i>órrek etxiótárutz/-etárutz</i>	'towards those houses'

(7) Alternatively, in the plural genitive locative, the nonlocative genitive form of the demonstrative can be used: *ónen etxiótáko* 'of these houses'.

<i>arétan etxiétan</i>	'in those houses over there'
<i>aretára etxietára</i>	'to those houses over there'
<i>ándik etxietátik</i>	'from those houses over there'
<i>ango etxietáko ~</i>	
<i>árek etxietáko</i>	'of those houses over there'
<i>árek etxietártz</i>	'towards those houses over there'

There is a set of emphatic or intensive demonstratives with a suffix *-xe* / *-txe*. The allomorph *-xe* occurs word-finally (that is, in the absolute singular), and *-txe* preceding inflectional suffixes):⁸

(64) Emphatic demonstratives

sing	plural	sing	plural	sing	plural
<i>auxel/áuxe</i>	<i>onétxek</i>	<i>orixe</i>	<i>orrétxek</i>	<i>axé(n)/áxé(n)</i>	<i>arétxek</i>
<i>onetxek</i>	<i>onétxek</i>	<i>orretxek</i>	<i>orrétxek</i>	<i>aretxek</i>	<i>arétxek</i>
<i>onetxeri</i>	<i>onétxéri</i>	<i>orretxeri</i>	<i>orrétxéri</i>	<i>aretxeri</i>	<i>arétxéri</i>
<i>onetxen</i>	<i>onétxen</i>	<i>orretxen</i>	<i>orrétxen</i>	<i>aretxen</i>	<i>arétxen</i>
<i>onetxentzat</i>	<i>onétxéntzat</i>	<i>orretxentzat</i>	<i>orrétxéntzat</i>	<i>aretxentzat</i>	<i>arétxéntzat</i> ⁹
<i>onetxégas</i>	<i>onétxékiñ</i>	<i>orretxégas</i>	<i>orrétxékiñ</i>	<i>aretxégas</i>	<i>arétxékiñ</i>

Emphatic demonstratives do not have suffixal counterparts. Rather, plain non-emphatic demonstratives are used as suffixes even when there is a pronominal emphatic demonstrative:

- (65) *auxe liburúa ~ auxe liburuáau*, (**auxe liburuáuxe*) 'this very book, abs'
orixe liburúa ~ orixe liburuóri, (**orixe liburuorixe*) 'that very book, abs'
axe liburúa, (**axe liburuáxe*) 'that very book over there, abs'
orretxeri gixonari (**orretxeri gixonorretxeri*) 'to that very man, dat'

The form *axen* is used exclusively as a pronominal demonstrative. E.g.: *axén ikusi-ot andižéna* 'that's the biggest one I have seen' (lit. 'that I have seen the biggest one').

In the singular locative cases, the emphatic forms of the place adverbials are used as demonstratives. In these forms the emphatic allomorphs *-xe* and *-txe* are in phonologically determined complementary distribution: *-xe* appears after a vowel and *-txe* after a consonant. The intensive morpheme is affixed in word-final position in the inessive, allative and genitive-locative. Ablative and directional forms are irregular. In the ablative, *-xeri-* is inserted as an infix inside the ablative suffix. In the directional, we find a final sequence *-a-xe-rutz* (that is, the suffix *-rutz* is added to the emphatic allative):

(66) Emphatic place adverbials

ines	<i>amentixe</i>	<i>ortxe</i>	<i>antxe</i>
all	<i>onaxe, áunaxe</i>	<i>orraxe</i>	<i>araxe</i>
	<i>aunaxe</i>		
abl	<i>amendixérík</i>	<i>ortixérík</i>	<i>andixérík</i>

(8) Historically, the affricate may derive from assimilation in forms such as **onek-xek*.

(9) Or *onetxentzako*, *onetxentzáko*, etc.

gen-loc	<i>amengoxe</i>	<i>orkoxe</i>	<i>angoxe</i>
dir	<i>onaxerutz</i>	<i>orraxerutz</i>	<i>araxerutz</i>

- (67) *amentxe ondarrian* 'on this very beach / right here on the beach'
orkoxe etxeko žawia 'the owner of that very house'

In the plural, there are special emphatic demonstrative forms bearing a suffix *-txe* in all cases but the genitive-locative, although absolute plural forms can be used instead in every case:

- (68) Emphatic plural demonstratives

ines	<i>onetxétan</i>	<i>orretxétan</i>	<i>aretxétan</i>
all	<i>onetxetára</i>	<i>orretxetára</i>	<i>aretxetára</i>
abl	<i>onetxetátik</i>	<i>orretxetátik</i>	<i>aretxetátik</i>
dir	<i>onetxetárutz</i>	<i>orretxetárutz</i>	<i>aretxetárutz</i>

- (69) *onetxetára etxietára ~ onétxek etxietára* 'to those very houses'

Manner adverbials are derived from demonstratives by means of a suffix */-la-n*/*. From these, noun modifiers in */-la-ko/* are formed.¹⁰

- (70) *áulan*

aulantxérík, áulantxerik 'in this very manner' (emphatic)

áulako 'like this'; e.g. *áulako arriža* 'a stone like this'

áulakoxe 'like this' (emphatic)

ólan

'in that manner'

olantxérík 'in that manner' (emphatic)

ólako 'like that'; e.g.: *ólako etxía* 'a house like that'

ólakoxe 'like that' (emphatic)

álan

'in that manner'

alantxérík 'in that very manner'

álako 'like that'

álakoxe 'like that'

For most forms there are also unaccented variants. Accented forms are used deictically (i.e. pointing at the referent). Forms with */-n-/* instead of */-l-/* are also employed for the first two paradigms; e.g.: *áunako, ónako*, etc.

The adverbials *on* 'now' and *ordun* 'then' also take the intensive suffix: *auntxe* 'right now', *ongoxe* or *aungoxe* 'of right now', *orduntxe* 'right then', *orduntxétik* 'since then', *orduntxe árte* 'until then'. From the noun *modu* 'way, type', there is also an intensive form *modukoxe* 'of that type'.

(10) *Lantxérík* and *lakoxe* are also used as free postpositional forms with genitive noun phrases in comparative expressions; e.g.: *nire lantxérík* 'like me', *Koldon lakoxia da* 's/he is like Koldo'.

3.1.6. Personal pronouns

Personal subject pronouns come in two series, regular and emphatic. The regular or non-emphatic pronouns have the following declension:

	'I' (1.)	'you' (2.)	'we' (1')	'you-pl' (2')
abs	<i>ni</i>	<i>su</i>	<i>gu</i>	<i>súek</i>
erg	<i>nik</i>	<i>suk</i>	<i>guk</i>	<i>súek</i>
dat	<i>niri</i>	<i>suri</i>	<i>guri</i>	<i>suéri</i>
gen	<i>nire</i>	<i>sure</i>	<i>gure</i>	<i>súen</i>
ben	<i>nitzat</i> ¹¹	<i>sutzat</i>	<i>gutzat</i>	<i>suéntzat</i>
com	<i>nígas</i>	<i>súgas</i>	<i>gúgas</i>	<i>suékin</i>
all	<i>nigana</i>	<i>sugana</i>	<i>gugana</i>	<i>suekána</i>
abl	<i>nigándik</i>	<i>sugándik</i>	<i>gugándik</i>	<i>súek ándik</i>

As non-emphatic third person personal pronouns, (distal) demonstratives are used; e.g.: *a da* 'that/he/she/it is', *árek diras* 'those/they are' (for the paradigm, cf. (56)).

The genitive forms *nire*, *gure*, *sure* do not carry the final *-n* that otherwise characterizes the genitive (this is general to all Basque dialects). In the comitative, we may note that the suffix *-gas*, used with singular nouns, is employed in the form *gúgas* which has plural reference.

In emphatic contexts, the following forms of the personal pronouns are used:

	'I' (1.)		's/he, it' (3.)	
	abs	erg	dat	gen
	<i>neu</i>	<i>neuk</i>	<i>neuri</i>	<i>neure</i>
	<i>seu</i>	<i>seuk</i>	<i>seuri</i>	<i>seure</i>
	<i>bera</i>	<i>berak</i>	<i>berari</i>	<i>bere(n)</i>
	<i>beori</i>	<i>beorrek</i>	<i>beorreri</i>	<i>beorren</i>
	<i>berentzat</i>	<i>seutrat</i>	<i>berentzat</i>	<i>berentzat</i>
	<i>berágas</i>	<i>séugas</i>	<i>berágas</i>	<i>beorrégas</i>
	<i>beragana</i>	<i>seugana</i>	<i>beragana</i>	<i>beorre(n)gana</i>
	<i>beragándik</i>	<i>seugándik</i>	<i>beragándik</i>	<i>beorre(n)gándik</i>
	<i>neurétik</i>	<i>seurétik</i>		<i>beorrenétik</i>
	'we' (1')		'you-pl' (2')	
	abs	erg	dat	gen
	<i>géu</i>	<i>geuk</i>	<i>geuri</i>	<i>geure</i>
	<i>séwek</i>	<i>séwek</i>	<i>sewéri</i>	<i>séwen</i>
	<i>éurak</i>	<i>éurak</i>	<i>eurári</i>	<i>éuren</i>
	<i>éurok</i>	<i>éurok</i>	<i>euróri</i>	<i>éuron</i>
	<i>euréntzat</i>	<i>sewéntzat</i>	<i>euréntzat</i>	<i>euréntzat</i>
	<i>eurákiñ</i>	<i>sewékiñ</i>		<i>eurákiñ</i>
	<i>eurakána</i>	<i>sewekána</i>	<i>eurakána</i>	<i>eurokána</i>
	<i>éurak ándik</i>	<i>séwek ándik</i>	<i>éurak ándik</i>	<i>éurok ándik</i>
	<i>eurenétik</i>	<i>sewenétik</i>	<i>eurenétik</i>	<i>eurenétik</i>

(11) Or *nitzako*, *sutzako*, etc.

The old second person singular (*b*)*i*, which is still used as a familiar second person in many varieties, has been completely lost in Lekeitio among the younger generations. Older speakers still use some forms of this pronoun, all from the emphatic paradigm (forms in parenthesis are very rare, even for the oldest generations):

(73) 'thou' (2 f)					
abs	<i>eu</i>		ben	(<i>eutzako</i>)	
erg	<i>euk</i>		com	<i>éugas</i>	
dat	<i>euri</i>		all	<i>ewana</i>	
gen	<i>eure</i>		abl	(<i>eugándik, éutik</i>)	

For all but the very oldest speakers, the pronoun *su* is the only second person singular form. Originally, *su* (*zu*) was a second person plural, which, following the same development as in other European languages, came to be used as a second person singular of respect (cf., for instance, Lakarra 1986). The current second person plural *síek* constitutes a later development.

The third person singular pronoun *bera* is an emphatic form of the third degree (or distal) demonstrative *a* and *berori* is originally an emphatic form of the second degree demonstrative *ori*. The form *éurak* also appears to be an emphatic form of the demonstrative *árek*.

3.1.7. Interrogative pronouns

The interrogative pronouns *nor* 'who', *ser* 'what' and *seiñ* 'which (one)' have the following declensional forms:

(74)		sg	pl	sg	pl
abs	<i>nor</i>	<i>nórtzuk</i>	<i>se(r)</i>	<i>sértzuk</i>	
erg	<i>nok, nórek</i>	<i>nórtzuk</i>	<i>sérek</i>	<i>sértzuk</i>	
dat	<i>nóri</i>	<i>nortzúri</i>	<i>séri, seréri</i>	<i>sertzúri</i>	
gen	<i>nóren</i>	<i>nortzun</i>	<i>séren</i>	<i>sertzun</i>	
ben	<i>noréntzat</i>	<i>nortzúntzat</i>	<i>seréntzat</i>	<i>sertzúntzat</i>	
com	<i>nó(g)as</i>	<i>nortzúkiñ</i>	<i>sé(g)as</i>	<i>sertzúkiñ</i>	
abs	<i>seiñ</i>	<i>séintxuk</i>			
erg	<i>seiñek</i>	<i>séintxuk</i>			
dat	<i>seiñeri</i>	<i>seintxúri</i>			
gen	<i>seiñen</i>	<i>seintxun</i>			
ben	<i>seiñéntzat</i>	<i>seintxúntzat</i>			

From *ser* 'what', there is a manner adverbial *sélan* 'how' and a corresponding noun modifier *seláko* 'of what type'; e.g.: *seláko liburúa da?* 'what kind of book is it?' The word for 'why' is *se(g)áittik*, where the second morphological element is the ablative of *gai* 'topic, reason'. The word for 'where' takes locative suffixes, presenting an irregular alternation between /nu-/ (before /n/) and /no-/:

(75)	ines	<i>nun</i>	'where'
	all	<i>nóra</i>	'whither'
	abl	<i>núndik</i>	'whence'
	gen	<i>núngeo</i>	'of where'
	dir	<i>nórutz</i>	'in which direction'
	dest	<i>nóra áñio</i>	'up to where'
		<i>nóra árte</i>	

The word for 'when' is *noix*, which has the inflected forms in (76):

(76)	<i>noix</i>	'when'	<i>nóixko</i>	'for when'
	<i>nóixtik</i>	'from when'	<i>noix árte</i>	'until when'

There is also an allative form *noixerá* 'to when', which is only used in the expression *noixétik noixerá* 'from time to time' and not as a question word.

All question words are accented in direct questions (where they receive focus accent), but unaccented in indirect questions (except for *sélan*, which is always accented; i.e. lexically):

(77)	<i>nór etorri da?</i>		(78)	<i>es-takít nor etorri dan</i>
	who come AUX			not-I-know who come AUX-CP
	'who has come?'			'I don't know who has come'
(79)	<i>nôri emon dotzásu?</i>		(80)	<i>es-takít nori emon dotzasun</i>
	who.D give AUX			not-I-know who.D give AUX-CP
	'to whom did you give it?'			'I don't know who you gave it to'

3.1.8. Quantifiers

There are three series of quantifiers that are derived from the interrogative pronouns. A first series, common to all Basque dialects (with only minor phonological differences), is formed by prefixing a vowel *i-* or *e-* to the interrogative pronouns. These have an existential meaning and are used in interrogative and negative sentences:

	'anybody'	'anything'		'anywhere'	'ever'
abs	<i>iñor</i>	<i>eser</i>	ines	<i>iñun</i>	<i>iñoix</i>
erg	<i>iñok</i>	<i>eserek</i>	all	<i>iñora</i>	
dat	<i>iñori</i>	<i>eseri</i>	abl	<i>iñúndik</i>	
gen	<i>iñon</i>	<i>eseren</i>	gen	<i>iñungo</i>	
ben	<i>iñontzat</i>	<i>eserentzat</i>			
com	<i>iñó(g)as</i>	<i>eseré(g)as/esé(g)as</i>			

The use of these quantifiers is illustrated in the following examples:

(82)	<i>iñor (be) es san etorri</i> ¹²		(83)	<i>iñok (be) es eban žan</i>
	'nobody came'			'nobody ate it'

(12) The negation is more emphatic when the quantifier is followed by *be* 'too' or *bes* (*be+es*).

- (84) *es neban iñor (be) ikusi*
 'I didn't see anybody'
- (85) *ikusi senduan iñor?*
 'did you see anybody?'
- (86) *ei(ñ) eban iñok?*
 'did anybody do it?'
- (87) *es tot nai eser eran*
 'I don't want to drink anything'
- (88) *ikusi senduan eser?*
 'did you see anything?'
- (89) *es nitzan iñoxi žuan*
 'I never went'
- (90) *žuan siñian iñoxi?*
 'did you ever go?'

Another series of quantifiers is obtained prefixing *edo-* lit. 'or' to the interrogative pronouns:

(91)		'anybody'	'anything'	'any, anybody, anything'
	abs	<i>edonor</i>	<i>edoser</i>	<i>edoseiñ</i>
	erg	<i>edonok/</i>	<i>edosek/</i>	<i>edoseiñek</i>
		<i>edonorek</i>	<i>edoserek</i>	
	dat	<i>edonori</i>	<i>edoseri</i>	<i>edoseiñeri</i>
	gen	<i>edonoren</i>	<i>edoseren</i>	<i>edoseiñen</i>
	ben	<i>edonorentzat</i>	<i>edoserentzat</i>	<i>edoseiñentzat</i>
	com	<i>edonó(g)as</i>	<i>edoseré(g)as/</i>	<i>edoseiñé(g)as</i>
			<i>edosé(g)as</i>	
		'anywhere'		'ever' 'anyhow'
	ines	<i>edonun</i>		<i>edonoix</i> <i>edosélan</i>
	all	<i>edonora</i>		
	abl	<i>edonúndik</i>		
	gen	<i>edonungo</i>		

These quantifiers are used in affirmative declarative sentences, as illustrated in the following examples:

- (92) *edonôr etorri lëike*
 'anybody may come'
- (93) *edonôk žan lëike*
 'anybody can eat it'
- (94) *edonôr ikusi leikíxu*
 'you can see anybody (you want)'
- (95) *edosér ein leikíxu*
 'you can do anything (you want)'
- (96) *edosein libûru dago ondo*
 'any book will be fine'
- (97) *edoseiñék ein lëike*
 'anybody could do it'
- (98) *edonorâ žuan leikíxu*
 'you can go anywhere (you want)'
- (99) *edonôix žuan néiket*
 'I can go any time'

The manner quantifier *edosélan* is also used in negative clauses (there is no corresponding form **eselan*, unlike in some other Biscayan varieties):

- (100) *esin neban edosélan be eiñ*
 'I couldn't do it in any manner'

A third series of quantifiers are formations on the interrogative pronouns with a reduplicative prefix followed by *o* (*u* after *u*). These quantifiers, thus, have a structure C₁V₁-*o/u*-C₁V₁X:

(101)	'somebody'	'something'	'somewhere'
abs	<i>nó o nor</i>	<i>sé o ser</i>	<i>ines</i> <i>nú u nun</i>
erg	<i>nó o no(re)k</i>	<i>sé o serek</i>	all <i>nó o nora</i>
dat	<i>nó o nori</i>	<i>sé o sereri</i>	abl <i>nú u nündik</i>
gen	<i>nó o noren</i>	<i>sé o seren</i>	gen <i>nú u nungo</i>
ben	<i>nó o norentzat</i>	<i>sé o serentzat</i>	
com	<i>nó o nó(g)as</i>	<i>sé o sé(g)as, sé o seré(g)as</i>	
	'some time'	'some how'	
	<i>nó o noix</i>	<i>sé o sélan</i>	

Examples:

- | | |
|---|---|
| (102) <i>nô o norek ža(n) eban</i>
‘somebody ate it’ | (106) <i>arâ nai dot žuan nó o noix</i>
‘I want to go there some time’ |
| (103) <i>nô o nor ikusi neban</i>
‘I saw somebody’ | (107) <i>ein senduan sé o sélan?</i>
did you do it somehow?’ |
| (104) <i>sê o ser nai dor žan</i>
‘I want to eat something’ | (108) <i>sê o sélan ein neban</i>
‘I did it somehow’ |
| (105) <i>nô o nora nai dot žuan</i>
‘I want to go somewhere’ | |

There is also an expression *báten bat* with the meaning ‘somebody, someone’. The plural of *bat* ‘one’, *bátzuk* is used to express ‘some’:

- | | |
|---|---|
| (109) <i>báten batek ža(n) eban</i>
‘someone ate it’ | (111) <i>libûru bátzuk erosi nebasan</i>
‘I bought some books’ |
| (110) <i>báten bat ikusi neban</i>
‘I saw somebody’ | |

3.1.9. Postnominal postpositions

There are a number of postpositions, most of which appear following inflected noun phrases (although some of them take uninflected phrases). Accently, these postpositions constitute independent words. In (112), the most important postpositions are listed. The case the word preceding the postposition takes is indicated in brackets, (\emptyset) corresponding to a noninflected form:

- (112) postnominal postpositions
 (all) *áiñō* ‘up to’. E.g.: *Ondarrúa áiñō* ‘up to Ondarroa’, *etxera áiñō* ‘up to the house’, *etxietára áiñō* [etʃietáraj.no] ‘up to the houses’.

- (all) *árte* 'up to, until'. E.g.: *Bilbóra árte* 'up to Bilbao', *amárrak árte* 'until ten'.
- (gen) *artian* 'between, among'. E.g.: *bizten artian* 'between the two', *ume artian* 'among children'.
- (Ø) *tartian* 'between, among'. E.g.: *arbola tartian* 'among the trees', *sasi tartian* 'among bushes'.
- (gen) *aurrian* 'in front of, before'. E.g.: *gixonen aurrian* 'in front of the man', *seure aurrian* 'in front of you'.
- (gen) *aurrélik* 'in front of' (with verbs of movement). E.g.: *seure aurrélik dóya* 's/he is going in front of you'.
- (gen) *atzian* 'behind'. E.g.: *etxien atzian dago* 's/he/it is behind the house', *ándren atzian geldittu da* 's/he has stayed behind the women'.
- (gen) *atzétik* 'behind' (with verbs of movement). E.g.: *islien atzétik pasa-san barkúa* 'the ship passed behind the island'.
- (gen) *aspízan* 'under'. E.g.: *arrizen aspízan* 'under the rock', *kotxién aspízan* 'under the car'.
- (gen) *aspítik* 'under' (with verbs of movement). E.g.: *etxien aspítik dóyas tuberízak* 'the pipes go under the house'.
- (gen) *ganian* 'on top of'. E.g.: *etxien ganian* 'on top of the house'.
- (gen) *ganétik* 'over' (with verbs of movement). E.g.: *elixien ganétik pasa sirian txorízak bolando* 'the birds passed flying over the church'.
- (gen) *kóntra* 'against'. E.g.: *neure kóntra* 'against me', *mundu gustižen kóntra* 'against everybody'.
- (Ø) *barik* 'without'. E.g.: *gurasó barik* 'without parents', *dirú barik* 'without money', *libíru barik* 'without books'.
- (abs) *gáittik* 'because of'. E.g.: *mutilla (g)áittik* 'because of the boy', *neskia (g)áittik* 'because of the girl', *mutillak (g)áittik* 'because of the boys'.

3.1.10. Gender

Basque lacks morphological gender. However, this category has been introduced through borrowing for a small set of nouns and adjectives in Lekeitio Basque. A number of nouns and adjectives referring to humans present a quasi-inflectional masculine/feminine distinction. The masculine ends in *-o/* and the feminine ends in *-a/*. Almost all of these items with gender motion have been directly borrowed from Spanish, (113a), but some of them are not found in Spanish and appear to have been formed by analogy, (113b). Among others we find the following examples (uninflected forms are given):

(113)	mASCULINE	fEMININE	
a.	<i>enano</i>	<i>enana</i>	'dwarf'
	<i>alto</i>	<i>alta</i>	'tall'
	<i>alumno</i>	<i>alumna</i>	'student'
	<i>madrileno</i>	<i>madrileña</i>	'Madridian'

<i>májo</i>	<i>mája</i>	'good looking, nice'
<i>sebilláno</i>	<i>sebillána</i>	'Sevillian'
<i>bajéro</i>	<i>bajéta</i>	'shorty'
<i>tonto</i>	<i>tónta</i>	'stupid, silly'
<i>txíllo</i>	<i>txílla</i>	'arrogant'
b. <i>gixájo</i>	<i>gixája</i>	'poor man/poor woman'
<i>sorristo</i>	<i>sorrista</i>	'lousy'
<i>txotxolo</i>	<i>txotxola</i>	'stupid, short witted'

In some borrowed adjectives of nationality and a few others, to a consonant-final masculine corresponds a feminine form in *-a* (generally accented). These words are all Spanish borrowings:

(114) masculine	feminine	
<i>frantzes</i>	<i>frantzésa</i> ¹³	'Frenchman/Frenchwoman'
<i>ingelés</i>	<i>ingelésa</i>	'Englishman/Englishwoman'
<i>español</i>	<i>española</i>	'Spanish'

Some of the adjectives with gender motion can be used with reference to both humans and nonhumans (including inanimates). The form ending in */-a/* of these adjectives is used with reference to a human female, whereas the other form is used in all other cases:

(115) female referent:	<i>neska áltा bat</i>	'a tall girl'
male referent:	<i>mutil áltо bat</i>	'a tall boy'
inanimate referent:	<i>etxe áltо bat</i>	'a tall house'

The */-a/* form of adjectives presenting gender motion is, thus, the marked term in the opposition, being sensitive to the semantic feature "female", whereas the masculine form is also the default form (cf. Oñederra & Hurch 1991).

With all other adjectives there is no gender agreement of any sort:

(116) female referent:	<i>neska sendo bat</i>	'a strong girl'
male referent:	<i>mutil sendo bat</i>	'a strong boy'
inanimate referent:	<i>etxe sendo bat</i>	'a strong house'

Gender distinctions are sometimes maintained in verbs derived from adjectives, as in the following pairs:

(117) <i>morenotu</i>	'to become tanned (a male)'	< <i>moréno</i> 'dark (male)'
<i>morenatu</i>	'to become tanned (a female)'	< <i>moréna</i> 'dark (female)'
<i>majotu</i>	'to become handsome (a male)'	< <i>májo</i> 'handsome (male)'
<i>majatu</i>	'to become handsome (a female)'	< <i>mája</i> 'handsome (female)'

This is interesting because Spanish, from which the category was borrowed, does not offer the possibility of marking gender in verbs.

(13) To give examples with declensional suffixes: *frantzesak* 'the Frenchman, erg', *frantzesak* 'the Frenchwoman, erg'.

3.2. Verbal inflection

Except for a handful of verbs which possess synthetic forms in a couple of tenses, verb expressions in Basque consist of a participle (perfective, imperfective or future) followed by an auxiliary. Transitive and intransitive verbs take different auxiliaries, as can be seen in the following examples:

(118) intransitive		transitive	
<i>geratu da</i>	's/he (has) remained'	<i>erosi dau</i>	's/he (has) bought'
<i>geratu san</i>	's/he remained'	<i>erosi eban</i>	's/he bought'
<i>geratzen da</i>	's/he remains'	<i>erosten dau</i>	's/he buys'
<i>geratuko da</i>	's/he will remain'	<i>erosiko dau</i>	's/he will buy'
<i>geratuko san</i>	's/he would remain'	<i>erosiko eban</i>	's/he would buy'

Whether a verb takes the transitive or the intransitive auxiliary is generally predictable from semantic considerations. There are, nevertheless, well-known exceptions, such as *urten* 'to leave, go out', which takes the transitive auxiliary in spite of the fact that it can never take a direct object (cf. section 4.4.3). In the following sections, the morphology of the participial and other nonfinite forms is examined (3.2.1) and then the conjugation of the intransitive and transitive auxiliaries as well as that of those synthetic verbs which are currently in use in Lekeitio are presented, (3.2.2). Finally, the main analytical expressions are given with their meanings (3.3.3).

3.2.1. Nonfinite forms

As mentioned, there are three participial forms that are used with an auxiliary in analytic verbal expressions: the imperfective, perfective and future participles. In addition, there are other nonfinite forms.

3.2.1.1. Perfective participle

Perfective participles fall into several groups according to their ending. To begin with, as in all Basque dialects, there are three relatively small groups of (mostly) native participles ending in *-i*, *-n* or with no suffix. The lists in (119) are nearly exhaustive:

- (119) *i*: *etorri* 'to come', *ibilli* 'to walk', *asi* 'to begin', *žantzi* 'to dress', *žausi* 'to fall', *žosi* 'to sew', *ebagi* 'to cut', *egosi* 'to boil, cook', *ekarri* 'to bring', *erakutzi* 'to show', *ereitxi* 'to opine, seem', *erosi* 'to buy', *elegi* 'to hang', *euki* 'to have', *erantzti* 'to undress', *eutzi* 'to hold', *igarri* 'to guess', *iesi* 'to flee', *ikasi* 'to learn', *ikusi* 'to see', *ipinī* 'to put', *irabasi* 'to win, earn', *itxi* 'to allow', *nai* 'to want', *bixi* 'to live', *busti* 'to get wet', *meresi* (< Sp. *merece*) 'to deserve'.
- n*: *žagon* 'to take care', *žakiñ* 'to know', *žan* 'to eat', *žuan* 'to go', *egon* 'to be, stay', *eiñ* 'to do, make', *ekiñ* 'to insist', *emon* 'to give', *eran* 'to drink', *eraiñ* 'to open; to cause', *ereiñ* 'to sow', *eruan* 'to carry', *esan*

- 'to say', *etzun* 'to lie down', *entzun* 'to hear', *igon* 'to go up, climb', *iraktiñ* 'to boil', *ixan* 'to be', *urten* 'to leave'.
 Ø: *žaižo* 'to be born', *žaso* 'to happen; to lift', *žo* 'to hit', *erre* 'to burn', *ižo* 'to grind', *itio* 'to drown', *gorde* (< Sp. *guarda*) 'to keep'.

A much larger group of participles takes an ending /-tu/,¹⁴ realized as *-du* after a nasal or lateral. This group includes verbs derived from nouns and adjectives (120a) (further exemplified in section 3.3.3), old borrowings (120b), and some (synchronously) nonderived native participles (120c):

- (120) a. *berdetu* 'to become green', *baltzittu* 'to blacken', *epeldu* 'to become mild', *bigundu* 'to soften', *atzeratu* 'to delay', *asarratu* 'to become angry'.
- b. *sarratu* 'to close', *žokatu* 'to play', *erregutu* 'to pray, beg', *geratu* 'to remain', *konpondu* 'to repair', *parkatu* 'to pardon', *sikatu* 'to dry', *saldu* 'to sell', *urkatu* 'to hang', *bajatu*.¹⁵
- c. *ospatu* 'to celebrate', *eldu* 'to ripe', *eskatu* 'to ask', *esagutu* 'to know', *galdu* 'to loose', *ikutu* 'to touch', *kendu* 'to take away', *ostu* 'to steal', *sortu* 'to create', *atertu* 'to stop raining', *ukatu* 'to deny'.

A few participles that end in *-tu* in most dialects have added a final *-n* in Lekeitio and neighboring varieties:

- (121) *artun* (com. (b)*artu*) 'to take', *sartun* (com. *sartu*) 'to go or take inside', *lotun* (com. *lotu*) 'to tie'.

Two very large and productive classes of perfective participles are a group with final *-a* (not a suffix), adapted from Spanish verbs of the first conjugation (infinitive in /-ar/, past participle in /-ado/), exemplified in (122a), and a group in *-idu*,¹⁶ based on the past participle of Spanish verbs of the second or third conjugation (infinitive in /-er/ and /-ir/, past participle in /-ido/), (122b):

- (122) a. *alegra*, 'to become or render happy' < Sp. *alegrado*, *anima* 'to animate, encourage' < Sp. *animado*, *arrasta* 'to drag' < Sp. *arrastrado*, *arregla* 'to repair' < Sp. *arreglado*, *arrima* 'to bring near' < Sp. *arrimado*, *ataka* 'to attack' < Sp. *atacado*, *atrappa* 'to catch' < Sp. *atrapado*, *asma* 'to guess' < O. Sp. *asmado*, *barrunta* 'to surmise' < Sp. *barruntado*, *benga* 'to avenge' < Sp. *vengado*, *desia* 'to desire' < Sp. *deseado*, *desgasta* 'to wear out' < Sp. *desgastado*, *errebiña* 'to revise' < Sp. *revisado*, *erregala* 'to give as a gift' < Sp. *regalado*, *erresa* 'to pray' < Sp. *rezado*, *errespeta* 'to respect' < Sp. *respetado*, *deskontzola* 'to grieve' < Sp. *desconsolado*, *diborsiža* 'to divorce' < Sp. *divorciado*, *enterra* 'to bury' < Sp. *enterrado*, *entzaiza* 'to try' < Sp. *ensayado*, *erresulta* 'to result' < Sp. *resultado*, *erretira* 'to retire' < Sp. *retirado*, *eskapa* 'to escape' < Sp. *escapado*, *espan-*

(14) This ending is generally assumed to have been borrowed from Latin, but see Trask (1990).

(15) The obviously modern *bajatu* 'to go or get down' could be a modernization of an older **baxatu*. If it were a recent borrowing, the expected form would be **baja* (cf. 122a).

(16) This ending is very often pronounced as [iru].

- ta* 'to frighten' < Sp. *espantado*, *espiža* 'to spy' < Sp. *espiado*, *esplika* 'to explain' < Sp. *explicado*, *esplota* 'to explode' < Sp. *explotado*, *estima* 'to esteem' < Sp. *estimado*, *estropesa* 'to tumble' < Sp. *tropezado*, *estudiža* 'to study' < Sp. *estudiado*, *falta* 'to lack' < Sp. *faltado*, *flota* 'to float' < Sp. *flotado*, *afusilla* 'to shoot' < Sp. (*a*)*fusilado*, *gasta* 'to spend' < Sp. *gastado*, *goberna* 'to govern' < Sp. *gobernado*, *gomuta* 'to remember' < O. Sp. *conmutado*, *gomintta* 'to vomit' < Sp. *vomitado*, *gusta* 'to like' < Sp. *gustado*, *infeta* 'to infect' < Sp. *infectedo*, *kanbiža* 'to change' < Sp. *cambiado*, *kanta* 'to sing' < Sp. *cantado*, *kantza* 'to get tired' < Sp. *cansado*, *komenta* 'to comment' < Sp. *comentado*, *konfesa* 'to confess' < Sp. *confesado*, *konpara* 'to compare' < Sp. *comparado*, *konforma* 'to conform' < Sp. *conformado*, *konfiža* 'to trust' < Sp. *confiado*, *konplika* 'to complicate' < Sp. *complicado*.
- b. *atrebidu* 'to dare' < Sp. *atrevido*, *batidu* 'to shake' < Sp. *batido*, *desaparesidu* 'to disappear' < Sp. *desaparecido*, *desididu* 'to decide' < Sp. *decidido*, *despedidu* 'to say goodbye' < Sp. *despedido*, *dibididu* 'to divide' < Sp. *dividido*, *dirijidu* 'to direct' < Sp. *dirigido*, *diskutidu* 'to discuss' < Sp. *discutido*, *elejidu* 'to choose' < Sp. *elegido*, *eskribidu* 'to write' < Sp. *escrito/escribir*, *enbolbidu* 'to wrap up' < Sp. *envuelto/envolver*, *entretenidu* 'to entertain' < Sp. *entretenido*, *eridu* 'to hurt' < Sp. *herido*, *kabidu* 'to fit' < Sp. *cabido*, *komenidu* /*konbenidu* 'to be convenient' < Sp. *convenido*, *kombensidu* 'to convince' < Sp. *convencido*, *kondusidu* 'to drive' < Sp. *conducido*, *konprometidu* 'to compromise' < Sp. *comprometido*, *konsegidu* 'to obtain' < Sp. *conseguido*, *koinsididu* 'to coincide' < Sp. *coincidido*, *korrejidu* 'to correct' < Sp. *corregido*, *korridu* 'to run' < Sp. *corrido*, *leidu* 'to read' < Sp. *leido*, *mantenidu* 'to maintain', *mantenido*, *mobidu* 'to move' < Sp. *movido*, *obedesidu* 'to obey' < Sp. *obedecido*, *ofendidu* 'to offend' < Sp. *ofendido*, *presididu* 'to preside' < Sp. *presidido*, *prometidu* 'to promise' < Sp. *prometido*, *reunidu* 'to gather' < Sp. *reunido*, *segidu* 'to follow' < Sp. *seguido*, *sentidu* 'to feel' < Sp. *sentido*, *serbidu* 'to serve' < Sp. *servido*, *sobrebibidu* 'to survive' < Sp. *sobreviduo*, *sufridu* 'to suffer' < Sp. *sufrido*, *sujeridu* 'to suggest' < Sp. *sugerido*, *unidu* 'to unite' < Sp. *unido*.

The patterns of adaptation shown by the examples above are fully productive in the adaptation of new verbs. Thus, Lekeitio verbs derived from Spanish verbs of the second and third conjugations are usually basically identical to the past participle of these verbs in Spanish, with the small change of final *-o* in *-u*, as in *prometido* > *prometidu*. Ultimately, for verbs of the first conjugation, the Spanish past participle is also the direct source of the borrowing. In neighboring Biscayan varieties we find forms such as *animaau* > *anima(d)o*, *kantau* > *canta(d)o*, etc. In these varieties it is clear that the same pattern of adaptation is followed for Spanish verbs of all three conjugations: the Basque perfective participle is identical to the Spanish past participle with the minor adaptation that the final */-o/* is raised to */-u/*. The loss of the dental consonant in *-au* (versus *-idu*) is due to the Spanish source itself, where the colloquial pronunciation of the participial ending *-ado* is [ao] (but the /d/ is not deleted in participles in *-ido*). In Lekeitio there appears to have been a change *-au* > *-a* in

perfective participles. The original morpheme-final high vocoid surfaces, nevertheless, when degree adjectival suffixes or nominal inflectional suffixes are added, as in *gustaw-ágo* 'more liked' (cf. section 2.7.5), *atrapaw-a* 'crazy' (lit. 'caught') *kantaw-á(g)as* 'with the singing'.

The treatment of those verbs which in Spanish present irregularities, nevertheless, shows that the adaptation does not simply consist in taking a specific form of the Spanish verb; but rather there are established patterns of adaptation. Forms such as *eskribidu* 'to write' and *enbolbidu* 'to wrap up' clearly do not derive from the past participle of Sp. *escribir*, *envolver*, which are the irregular *escrito*, *envuelto*, respectively, and not **escribido*, **envolvido*.

3.2.1.2. Imperfective and future participles

The future participle of all verbs is created by adding /-ko*/ to the perfective form ([go] after a nasal).

The imperfective participle, on the other hand, presents a certain amount of allomorphy, depending on the shape of the perfective participle. Verbs whose perfective participle ends in /-tu/ and /-tu-n/ generally replace this ending by /-tzen*/ in the imperfective (123a), except that when the root (stem minus the perfective ending) ends in a fricative or affricate, the perfective ending is not removed and the suffix /-ten*/ is added, (123b). The reason for this exception is clearly of a phonotactic nature; namely, to avoid sequences of the type [sts] (which are also avoided in other dialects in verb morphology, although the specific means may be different, cf. Hualde 1991: 134-35). If the root ends in the vowel /-i/ (or, what amounts to the same thing, if the /t/ of the suffix /-tu/ is palatalized), there is free variation between a form created by removing /-tu/ and adding /-tzen*/ and a form where the suffix /-ten*/ is added after /-tu/, (123c):

(123)	perfective	imperfective	future	
a.	<i>bajatu</i>	<i>bajátsen</i>	<i>bajatúko</i>	'to go down'
	<i>kendu</i>	<i>kéntzen</i>	<i>kendúko</i>	'to take away'
	<i>saldu</i>	<i>sáltzen</i>	<i>saldúko</i>	'to sell'
	<i>sarratu</i>	<i>sarrátsen</i>	<i>sarratúko</i>	'to close'
	<i>apurtu</i>	<i>apúrtzen</i>	<i>apurrúko</i>	'to break'
	<i>artun</i>	<i>ártzen</i>	<i>artúko</i>	'to take'
b.	<i>ostu</i>	<i>ostúten</i>	<i>ostúko</i>	'to steal'
	<i>aberastu¹⁷</i>	<i>aberastúten</i>	<i>aberastúko</i>	'to become rich'
	<i>bistu</i>	<i>bistúten</i>	<i>bistúko</i>	'to light'
	<i>otzittu¹⁸</i>	<i>otzittúten</i>	<i>otzittúko</i>	'to become cold'
c.	<i>amaittu</i>	<i>amáitsen</i>	<i>amaittúko</i>	'to finish'
		<i>amaittúten</i>		
	<i>geldittu</i>	<i>geldítsen</i>	<i>geldittúko</i>	'to remain'
		<i>geldittúten</i>		

(17) From *aberatz* 'rich, wealthy'.

(18) The form *otzittu* 'to become cold' contains two perfective endings /otz-i-tu/ (although, synchronically, the first ending should perhaps be considered a mere epenthetical segment). This participle derives from *otz* 'cold' with the suffix *-tu*. The root, thus, ends in an affricate.

Verbs whose perfective participle ends with the suffixes */-i/* and */-n/* replace this ending by */-ten*/*, (124a) (*/-i/* is not lost when the resulting sequence would be unsyllabifiable, cf. *euki*).¹⁹ In all other cases, the ending */-ten*/* is added to the perfective form to create the imperfective participle, (124b):

(124) a.	<i>ekarri</i>	<i>ekárten</i>	<i>ekarriko</i>	'to bring'
	<i>etorri</i>	<i>etórten</i>	<i>etorríko</i>	'to come'
	<i>erosi</i>	<i>erósten</i>	<i>erosíko</i>	'to buy'
	<i>ibilli</i>	<i>ibíltten</i>	<i>ibillíko</i>	'to walk'
	<i>euki</i>	<i>eukítten</i>	<i>eukíko</i>	'to have'
	<i>ipiñi</i>	<i>ipíntten</i>	<i>ipiñíko</i>	'to put'
	<i>emon</i>	<i>emóten</i>	<i>emóngo</i>	'to give'
	<i>žan</i>	<i>žáten</i>	<i>žángo</i>	'to eat'
	<i>žakiñ</i>	<i>žakítten</i>	<i>žakíngo</i>	'to know'
	<i>urten</i>	<i>urtéten</i>	<i>urténgو</i>	'to leave'
	<i>esan</i>	<i>esáten</i>	<i>esángo</i>	'to say'
	<i>eraïñ</i>	<i>eraíttten</i>	<i>eraíngo</i>	'to open'
	<i>igon</i>	<i>igóten</i>	<i>igóngo</i>	'to go up'
b.	<i>kanbiža</i>	<i>kanbižáten</i>	<i>kanbižáko</i>	'to change'
	<i>asma</i>	<i>asmáten</i>	<i>asmáko</i>	'to make up'
	<i>desia</i>	<i>desiáten</i>	<i>desiáko</i>	'to desire'
	<i>leidu</i>	<i>leidúten</i>	<i>leidúko</i>	'to read'
	<i>eskribidu</i>	<i>eskribidúten</i>	<i>eskribidúko</i>	'to write'
	<i>žaižo</i>	<i>žaižóten</i>	<i>žaižóko</i>	'to be born'
	<i>erre</i>	<i>erréten</i>	<i>erréko</i>	'to burn'

3.2.1.3. Verbal noun

A verbal noun form, used in nominalized clauses, is created by means of the nominalizing suffix */-te*/* ~ */-tze*/*. The attachment of this suffix follows the morphophonological conditions stated above for the imperfective participle, to which the nominalizing morpheme is obviously related:

(125) perfective part.		verbal noun
<i>apurtu</i>	'to break'	<i>apúrtze</i> '(the) breaking'
<i>amaittu</i>	'to finish'	<i>amáítze</i> '(the) finishing'
<i>erosi</i>	'to buy'	<i>eróste</i> '(the) buying'
<i>asi</i>	'to begin'	<i>áste</i> '(the) begining'
<i>eiñ</i>	'to do, make'	<i>éitte</i> '(the) doing'
<i>emon</i>	'to give'	<i>emóte</i> '(the) giving'
<i>erre</i>	'to burn'	<i>erréte</i> '(the) burning'
<i>asma</i>	'to make up'	<i>asmáte</i> '(the) making up'

(19) The verb *bixi* 'to live' also preserves its final vowel, *bixítxen*. As far as we know, this is true in every Basque dialect.

Verbal nouns are inflected like any other noun; e.g.: *apurtzía* 'the breaking, abs', *apurtziak* 'erg', *apurtziári* 'dat', etc.

The genitive locative form of the verbal noun has a final meaning; e.g. *apurtzéko* 'for breaking', *erosiéko* 'for buying', and is used in embedded clauses of various types (cf. section 4.5.4).

3.2.1.4. Perfective participles as adjectives

Perfective participles can be used as noun modifiers in postnominal position, in which case they can take nominal inflection. The following examples are all inflected in the absolute singular:

(126) <i>erre</i> 'to burn'	<i>žatéko erria</i>	'burnt food'
<i>asi</i> 'to grow'	<i>mutil asiža</i>	'grown boy'
<i>ebagi</i> 'to cut'	<i>okela ebagiža</i>	'sliced meat'
<i>entzun</i> 'to hear'	<i>gausa entzuna</i>	'(often)-heard thing'
<i>atreibidu</i> 'to dare'	<i>gixon atreibidua</i>	'daring man'
<i>estima</i> 'to esteem'	<i>lagun estimawa</i>	'esteemed friend'

As any other adjectives, participles in this usage can take degree suffixes:

(127) <i>gausárik entzunéna</i>	'the most often heard thing'
<i>atreibiduáwa</i>	'more daring'
<i>erriegíza</i>	'too burnt'

3.2.1.5. Predicative participial adjectives

There is a suffix */-ta*/* (*[-da]* after a nasal or lateral), which, added to the perfective participle, forms predicative participial adjectives:

(128) perfective part.		part. adjective	
<i>apurtu</i>	'to break'	<i>apurtúta</i>	'broken'
<i>amaittu</i>	'to finish'	<i>amaittúta</i>	'finished'
<i>erosi</i>	'to buy'	<i>erosítta</i>	'bought'
<i>asi</i>	'to begin'	<i>asíttta</i>	'begun'
<i>eiñ</i>	'to do'	<i>éindda</i>	'done'
<i>emon</i>	'to give'	<i>emónda</i>	'given'
<i>erre</i>	'to burn'	<i>erréta</i>	'burnt'
<i>asma</i>	'to make up'	<i>asmáta</i>	'made up'
<i>ill</i>	'to die, kill'	<i>íldda</i>	'dead'

These forms are used as adjectival predicates in copulative sentences with *egon* as well as in certain resultative constructions; e.g.: *máiža apurtúta dago* 'the table is broken'; *saldúta daukat* 'I got it sold'.

3.2.1.6. Relative participial forms

The form based on the participial adjective plus the suffix /-ko/ is used as a complement of a noun in prenominal position in nonfinite relative constructions (cf. section 4.5.2):

- (129) *aittak ekarrítako erregalúa* ‘the present that father brought’
seuk apurtútako kristala ‘the glass you broke’

It may be noted that the syllable preceding the ending *-tako* receives an accent. This suffix, thus, assigns an accent to the preceding syllable (cf. section 2.8.5). With the same meaning and usage a form in *-niko* is alternatively (and more frequently) employed:

- (130) *aittak ekarríniko erregalúa* ‘the present that father brought’
seuk apurtúniko kristala ‘the glass you broke’

These nonfinite verbal forms can also receive nominal inflection if the head of the relative construction is null:

- (131) *aittak ekarrítakua/ekarrníkua* ‘the one that father brought’
aittak ekarrítakuari/ekarrníkuari ‘to the one that father brought’

3.2.1.7. Other nonfinite forms

The suffix /-keran*/ is added to the perfective participle to create a form with the meaning ‘in the act of V-ing, upon V-ing’. Verbs with the suffix /-n/ lose this ending before the suffix /-keran/:

- | | | | |
|-------|---------------|--------------------|--------------------------|
| (132) | <i>žun</i> | <i>žukérán</i> | ‘in the act of going’ |
| | <i>eiñ</i> | <i>eikérán</i> | ‘in the act of making’ |
| | <i>etorri</i> | <i>etorrikérán</i> | ‘in the act of coming’ |
| | <i>ikusi</i> | <i>ikusikérán</i> | ‘in the act of seeing’ |
| | <i>apurtu</i> | <i>apurtukérán</i> | ‘in the act of breaking’ |
| | <i>pentza</i> | <i>pentzakérán</i> | ‘in the act of thinking’ |

- (133) *kotxétik urtekérán buruâ žo neban atiágas*
‘upon leaving the car, I hit my head with the door’

- (134) *etxian sartukérán sarata askô eitten-dósu*
‘when you get home you make a lot of noise’

There is another suffix /-kotan*/ or /-koan*/ ‘for’ which is added to the verbal noun (or, which is the same, to the imperfective participle minus the final /-n/):

- | | | | |
|-------|---------------|---------------------|--------------------------|
| (135) | <i>žun</i> | <i>žutekótan</i> | ‘to go, for going’ |
| | <i>etorri</i> | <i>etortekótan</i> | ‘to come, for coming’ |
| | <i>apurtu</i> | <i>apurtzekótan</i> | ‘to break, for breaking’ |

- (136) *bakárrik etortekótan, obetô es basátos*
 'to come alone, better if you don't come'

- (137) *ainbésté eráten ibilttekúan, naižágó dot etxian geldittu*
 'to be drinking so much, I prefer to stay at home'

The suffix /-koan*/ can also be added to the allative form of the verbal noun to produce a form which has the same meaning as /-keran*/. This form is not as common in Lekeitio as the one with /-keran*/:

- (138) *kristala apurtzerakúan topa eban* (rare)
 'upon breaking the glass s/he found it'

3.2.2. Finite forms

As was mentioned, conjugated verbal expressions generally consist of a participle and an auxiliary (intransitive or transitive). In the following sections, the different forms of the auxiliaries are studied. They are the following: present indicative, past indicative, conditional protasis, conditional apodosis, present potential, hypothetical potential, present subjunctive, and imperative. Intransitive and transitive forms will be presented separately. In addition to the auxiliaries, a reduced group of verbs possesses synthetic conjugated forms, but only for the present and past indicative. These will be presented after the paradigms of the corresponding auxiliary (intransitive or transitive).

3.2.2.1. Intransitive auxiliary

Present and past indicative. The most basic intransitive forms show agreement with an absolutive argument, the subject of the clause. The intransitive auxiliary, which can also be used by itself with copular function, has the following present and past indicative forms in Lekeitio.²⁰

- (139) Present and past indicative monovalent forms

Present indicative		Past indicative	
1. <i>ni</i>	<i>naix/nas</i>	'I am'	<i>nitzan</i>
2f. <i>eu</i>	<i>as</i> ²¹	'thou art'	
3. <i>bera</i>	<i>da</i>	's/he is'	<i>san</i>
1. <i>gu</i>	<i>gara</i>	'we are'	<i>giñian</i>
2. <i>su</i>	<i>sara</i>	'you are'	<i>siñian</i>
2'. <i>súek</i>	<i>sarie</i>	'you-pl are'	<i>siñén</i>
3'. <i>eurak</i>	<i>dira(s)/dis</i>	'they are'	<i>sírian</i>
			'they were'

(20) Person and number are indicated in the following manner: 1. = first person singular, 2f. = second person singular familiar (only used in certain imperative forms and, by old speakers, in a few other tenses), 3. = third person singular, 1' = first person plural, 2' = second person singular, 2'' = second person plural, 3' = third person plural. Second person singular forms are ordered after the first person plural in the paradigms for morphological/etymological reasons (i.e. because their morphology shows that originally they were plural forms; cf. section 3.1.6).

(21) This form is no longer in use in Lekeitio. It is remembered by old speakers.

These forms differ little from those found elsewhere in Basque. In non-Biscayan dialects the pluralizer in the 2' form is *-te* instead of *-e*; cf., for instance, the standard forms *zarete* 'you-pl are' and *zineten* 'you-pl were'. It can be noted that the only accented forms are the second person plural forms, which contain a pluralizer /e*/.

In both the present and the past indicative tenses there are bivalent forms (absolutive-dative) of the copula/intransitive auxiliary, but only for a third person absolute argument, singular or plural. The left-column numbers refer to the person and number of the dative argument:

(140) Present and past indicative bivalent forms (abs/dat)

Present		Past	
	abs 3rd sg	abs 3rd pl	abs 3rd sg
1. žat	žaras	žaten	žatesen/žarasen
3. žako	žakos	žakon	žakosen
1'. žaku	žakus	žakun	žakusen
2. žatzu	žatzus	žatzun	žatzusen
2'. žatzué	žatzúes	žatzúen	žatzúesen
3'. žáke	žákes	žáken	žakésen

(sample translations: *žat* 'it is to me', *žaras* 'they are to me', *žaten* 'it was to me', *žatesen* 'they were to me').

The initial *ž-* of these forms seems to derive from palatalization of an older sequence /d-i/, where the initial /d-/ is a third person absolutive marker and the /i/ a prefix associated with the dative suffix.²² The plural (dative) morphemes /-e*/ and /-ke*/ introduce accents in the second and third person plural forms respectively. The pluralization of the absolutive argument is indicated by a suffix *-s* which, in the past, precedes the past tense marker *-n*. The alternation between *t* and *r* in the first person absolutive marker would appear to reflect an original *d*, which would devoice word-finally and rhotacize in intervocalic position.

Conditional. In the conditional, identical forms are used in the protasis and the apodosis in Lekeitio; but the protasis bears a prefix /ba*/-, which causes penultimate accentuation:

(141) Conditional monovalent forms

Protasis	Apodosis
1. banitzatéke/banítzan	nitzateke/nitzan
3. básan	san
1'. bagiñitéke(s)/bagiñían	giñiteke(s)/giñian
2. basiñítéke(s)/basiñían	siñiteke(s)/siñian
2'. basiñítékies/basiñíen	siñiteké(s)/siñíen
3'. basirían	sirian

(22) A form such as *žat* 'it is to me', historically from /d-i-a-t/, where to the basic form *da* 'is' a first person marker /-t/ and a dative affix /-i-/ are added, can be compared with Gipuzkoan (and standard) *zaiz* /d-i-a-i-t/, with repetition of the dative marker /-i-/, and with *dakit* /d-a-ki-t/, used with the same meaning in small areas of Navarre (e.g. Arbizu) and Biscay (cf. Zuazo 1988: 374), where the dative marker is /-ki/.

As shown, there are special conditional forms, derived from the past tense and bearing a suffix /-teke/, only for first and second person forms, but not in the third person. In addition, as indicated in the table, past indicative forms can be used for all persons in both the protasis and the apodosis. This paradigm represents a merger and simplification with respect to other Basque dialects. In standard Basque, the suffix /-teke/ is used only in the apodosis (for all persons/numbers) and there are also protasis forms which are different from the past indicative (e.g., St. Basque past indicative *nintzen* 'I was', *zen* 's/he was'; protasis *banintz* 'if I were', *balitz* 'if s/he were'; apodosis *nintzateke* 'I would be', *litzateke* 's/he would be').²³

The bivalent intransitive past forms given above in (140) are used in both the protasis and the apodosis of conditional constructions. In the protasis the prefix /ba-*/ triggers penultimate accent, e.g.: *bažaten* 'if it were to me', *bažakúsen* 'if they were to us'.

Potential. In addition to indicative and conditional forms, there is a potential mood, which includes both present and past/hypothetical forms:

(142) Potential

Present	Past/ Hypothetical
1. <i>néike(t)/léket</i>	<i>neikien/leikien</i>
3. <i>léike</i>	<i>leikí(z)en</i>
1'. <i>giñikes/leikí(g)u</i>	<i>giñikí(g)un/leikí(g)un</i>
2. <i>siñikes/leikixu</i>	<i>siñikisen/leikixun</i>
2'. <i>siñikies/leikixué</i>	<i>siñikiúsen/leikixúen</i>
3'. <i>léikes/leiké(s)</i>	<i>leikí(z)en</i>

Both for reasons of interdialectal comparison and of internal reconstruction, it appears that, in each case where two alternative forms are given in (142), the older form for this meaning must be the first one listed (except that in *néket* the final /-t/, which redundantly marks the subject, must be an innovation).

With much certainty, these potential forms (many of which are also used as transitive forms) are originally forms of *egin* 'to do', whose root /-gi-/ constitutes the axis of the paradigm. The suffix /-ke/ is a marker of possibility/futurity, which originally presented a great freedom of combination with different verb forms (cf. Lafon 1944). The following morphological structure can be reconstructed for the present potential:

(143)	abs	tense	root	potential	plural
1.	<i>n-</i>	<i>e-</i>	<i>gi</i>	<i>-ke</i>	
3.	<i>l-</i>	<i>e-</i>	<i>gi</i>	<i>-ke</i>	
1'.	<i>giñ-</i>	<i>e-</i>	<i>gi</i>	<i>-ke</i>	<i>-z</i>
2.	<i>siñ-</i>	<i>e-</i>	<i>gi</i>	<i>-ke</i>	<i>-z</i>
2'.	<i>siñ-</i>	<i>e-</i>	<i>gi</i>	<i>-ke</i>	<i>-e-z</i>
3'.	<i>l-</i>	<i>e-</i>	<i>gi</i>	<i>-ke</i>	<i>-z</i>

(23) There are no morphologically distinct forms to express a failed condition (e.g., St.B. *nintzatekeen* 'I would have been').

Since all potential forms are accented, the morpheme /-ke/ must be taken to be underlyingly accented.

The second form in each pair in (142) appears to morphologically correspond to a bivalent form, where the absolutive is a third person (marked by a prefix /l-/ in the potential) and the final suffixes (/ -t/, / -Ø/, / -gu/, / -su/, / -su-e*/, / -es/) code the person and number of the dative argument. In fact, such forms are also used as bivalent absolutive-dative forms with a third person singular absolutive (and also as transitive forms, as mentioned). Thus an expression such as *etorri leikigu* is interpretable either as ‘we can come’ or as ‘he can come to us’. In bivalent forms where the absolutive is a third person plural, a final *-s* is added:

(144) Potential bivalent abs/dat forms²⁴

Present			
abs 3s / dat		abs 3p / dat	
1. (<i>léket</i>)	‘it can be to me’	(<i>leikétes</i>)	‘they can be to me’
3. <i>léke</i>		<i>lékes</i>	
1'. (<i>leikí(g)u</i>)		(<i>leikí(g)us</i>)	
2. <i>leikíxu</i>		<i>leikíxus</i>	
2'. <i>leikíxúe</i>		<i>leikíxúes</i>	
3'. <i>leikí(ž)e</i>		<i>leikí(ž)es</i>	
Past/hypothetical			
abs 3s /dat			
1. (<i>neikten /leikíen</i>)	‘it could be to me’		
3. <i>leikten</i>			
1'. (<i>leikí(g)un</i>)			
2. <i>leikíxun</i>			
2'. <i>leikíxúen</i>			
3'. <i>leikí(ž)en</i>			

Present subjunctive. Another mood in Basque is the subjunctive. In Lekeitio, the subjunctive is very little used, being usually replaced by infinitival clauses. The only special subjunctive intransitive forms that are employed are present tense monovalent form:

(145) Present subjunctive

1. <i>nasen/naixen/naižen</i>	2. <i>sarien</i>
3. <i>deižen/daižen</i>	2'. <i>sarién</i>
1'. <i>garien</i>	3'. <i>dirasen/disen/deižesen</i>

It can be observed that some of the forms in this paradigm derive from the corresponding present indicative forms plus a suffix *-en/*. A final nasal can thus be interpreted either as a past marker or as a subjunctive marker.

Bivalent present subjunctive forms are formed by adding */-(e)n/* to the present indicative forms and are thus identical to the past indicative paradigm given above

(24) These forms are also used as ergative/absolutive or ergative/absolutive/dative with transitive verbs.

in (60). That is, for instance, *etorri žakun* can be translated as 's/he came to us' or as a present subjunctive expression, e.g. *itxóten gagos semia etorri žakun* 'we are waiting for our son to come to us'.

Imperative. Finally, there is also an imperative mood. There are distinct imperative forms only for a second person subject (the only true commands that are possible). On the other hand, the imperative preserves a second person singular familiar form, which has been lost in all other paradigms. There are thus three forms in the intransitive imperative paradigm:

(146) Imperative

- 2f. *yári*²⁵
- 2'. *saix*
- 2. *sáixe*

Commands are also formed with the suffix /-ik*/ (*egik*) attached to the perfective participle: *etorrík* 'come!', *eskápaik* 'flee!'

3.2.2.2. Synthetic intransitive verbs

Besides the copula/intransitive auxiliary *ixan*, only four verbs have a synthetic present: *žu(a)n* 'to go', *egon* 'to be, stay', *ibilli* 'to walk' and *etorri* 'to come':

(147)	<i>žuan</i>	<i>egon</i> ²⁶	<i>ibilli</i>	<i>etorri</i>
	'go'	'be, stay'	'walk'	'come'
1.	<i>nóya</i> ²⁷	<i>nago</i>	<i>nabill</i>	<i>nator</i>
2f.	<i>óya</i>		<i>abill</i>	<i>ator</i>
3.	<i>dóya</i>	<i>dago</i>	<i>dabill</i>	<i>dator</i>
1'.	<i>góyas</i>	<i>gagos</i>	<i>gabiltzas/gabix</i>	<i>gatos</i>
2.	<i>sóyas</i>	<i>sagos</i>	<i>sabiltzas/sabix</i>	<i>satos</i>
2'.	<i>soyáse</i>	<i>sagóse</i>	<i>sabiltzáse/sabíxe</i>	<i>satóse</i>
3'.	<i>dóyas</i>	<i>dagos</i>	<i>dabiltzas/dabix</i>	<i>datos</i>

These forms differ little from those found elsewhere in Basque. The structure is as follows. The first consonant is the absolutive person marker (i.e. the subject): /n-/ = 1st sg, /d-/ = 3rd, /g-/ = 1st pl, /s-/ = 2nd. The following vowel *-a-*, which is absent in the paradigm of *žuan*, is a present tense marker. This is followed by the root of the verb: /-o(i)a-/ 'go', /-go-/ 'be, stay', /-bil-/ 'walk', /-torr-/ 'come'. Plural forms have a suffix /-s/, except that *ibilli* takes a double pluralizer /-tza-s/ as an option. Finally the relatively recent second person plural adds a final /-e*//, which triggers penultimate accent. Notice that all forms of *žuan* are also accented. The only morphophonological rule that deserves mention is the simplification of the group

(25) In Standard Basque *badi*. The initial palatal is probably from *egin*.

(26) The intervocalic /g/ is very often deleted in all forms of *egon*. The present indicative forms that are given in (147) are further reduced in rapid speech to *no*, *do*, *gos*, *sos*, *sóse*, *dos*.

(27) The vowel *-a* is frequently lost in all forms of this paradigm in rapid speech: *nói*, *dói*, *góis*, *sóis*, *dóis*.

/-rs/ in the plural forms of *etorri*, e.g. /g-a-tor-s/ *gatos* and of /-ls/ in plural forms of *ibilli* such as /g-a-bil-s/ *gabix*.

The plural paradigm of *egon* is that found in Biscayan varieties, where the pluralizer /-s/ has a much wider use than in other varieties. In other dialects the forms that are found show the presence of an original pluralizer /-de/; e.g. **g-a-go-de* > *gaude* 'we are, stay'. Two strong intransitive verbs, *ibilli* 'to walk' and *etorri* 'to come' have bivalent forms (absolutive-dative) in the present indicative. The absolutive argument can only be a third person, singular or plural. Notice that for *ibilli* there are no forms for a third person plural dative in current use:

(148) Bivalent present indicative forms

	<i>ibilli</i>		
<i>žabiltzat</i>	's/he is walking to me'	<i>žabiltzaras</i>	'they are walking to me'
<i>žabiltzo</i>	'he is walking to him/her'	<i>žabiltzos</i>	'they are walking to him/her'
<i>žabilgu</i>	'he is walking to us'	<i>žabilgus</i>	'they are walking to us'
<i>žabiltzu</i>	'he is walking to you'	<i>žabiltzus</i>	'they are walking to you'
<i>žabiltzue</i>	'he is walking to you-pl'	<i>žabiltzúes</i>	'they are walking to you-pl'

	<i>etorri</i>		
<i>žatort</i>	's/he is coming to me'	<i>žatortes</i>	'they are coming to me'
<i>žatorko</i>	's/he is coming to him/her'	<i>žatorkos</i>	'they are coming to him/her'
<i>žatorku</i>	's/he is coming to us'	<i>žatorkus</i>	'they are coming to us'
<i>žatortzu</i>	's/he is coming to you'	<i>žatortzus</i>	'they are coming to you'
<i>žatortzue</i>	's/he is coming to you-pl'	<i>žatortzúes</i>	'they are coming to you-pl'
<i>žatórke</i>	's/he is coming to them'	<i>žatórkes</i>	'they are coming to them'

As was mentioned with respect to the bivalent forms of the intransitive auxiliary, the initial *ž-* in these forms historically derives from a sequence /d-i-/, where /d-/ is the third person absolutive marker and /i-/ a prefix associated with the dative. The dative person marker appears after the root (-t ~ -d = 1st sg, -ko = 3rd sg, -gu ~ -ku (with devoicing) = 1st pl, -(t)zu = 2nd, -ke = 3rd pl). As in other cases, the second person plural takes an accented marker /-e*/. A plural (third person) absolutive is marked by a final /-s/.

In addition to the present, only two intransitive verbs besides the copula/intransitive auxiliary, namely, *egon* 'to be, stay' and *ibilli* 'to walk' possess a synthetic past (aorist):

(149) Past indicative monovalent forms

<i>egon</i>	<i>ibilli</i>	
1. <i>newan</i>	<i>nebillan</i>	2. <i>sewasan</i> <i>sebixan</i>
3. <i>ewan</i>	<i>ebillan</i>	2'. <i>sewásen</i> <i>sebíxen</i>
1'. <i>gewasan</i>	<i>gebixan</i>	3'. <i>ewasan</i> <i>ebixan</i>

These forms present the same person markers as the present paradigms, except that the third person has a zero marker, both in the singular and in the plural. After the absolutive subject prefix, a vowel /-e-/ is found, followed by the root. The final /-n/ is interpretable as a past marker, which in the plural is preceded by the plural-

izer /-s/ (with an intervening epenthetic vowel). The final lateral of /-bil-/ is deleted and the plural /-s/ palatalizes after /i/.

3.2.2.3. Transitive auxiliary

In Eastern dialects, the transitive auxiliary can be used as a main verb with the meaning of 'to have'; e.g.: *dirua dut* 'I have money'. In Lekeitio it has been replaced by *euki* in this function: *dirua daukat* 'I have money', **dirua dot*. Nevertheless, in Lekeitio, the transitive auxiliary can be used as a main verb in a couple of cases. Firstly, it can be used instead of the copula and appear as a main verb in a construction where the ergative (subject) inflection on the verb corresponds to an interested party, often replacing a possessive. Consider the following two examples:

- (150) *Urrutia da éuren žokalarírik onéna*

'Urrutia is their best player'

- (151) *Urrutia dábe žokalarírik onéna*

'they have Urrutia as (their) best player'

In these examples, encoding the third person plural referent as an argument of the verb instead of as a possessive gives the meaning that this is an affected party. Consider also the following example:

- (152) *Josébak askô maitte-rau ori mutilla, esta?*

'Joseba loves that boy a lot, right?'

klaro! semia rau ta!

'Sure, he is his son'

The last sentence where a transitive form is used conveys a sense that he (Joseba) is an affected party. This nuance is not found in the copulative *bere semia da* 'he is his son' where a possessive is used.

Secondly, the transitive auxiliary is used in constructions with certain nouns; e.g.: *ikaria dau* 's/he is afraid' ('s/he has fear'), *gorrotua dau* 's/he hates', *errespetua dau* 's/he has respect', *amorrua dau* 's/he is angry' ('s/he has anger'). There is a slight difference in meaning between this construction and corresponding expressions with the verb *euki* 'to have', which are less emphatic: *ikaria dauko*, *gorrotua dauko*, etc.

Present indicative. In (153) the present indicative forms of the transitive auxiliary for a third person object are given. The left-column forms are those for a third person singular direct object and the right-column ones those for a third person plural object:

- (153) Present indicative for a 3rd person DO

3rd sg DO 3rd pl DO

1. *dot*

doras

1'. *dogu*

dogus

2f. *dok/dona*²⁸

2. *dosu*

dosus

3. *dau*

ditxus

2'. *dosué*

dosúes

3. *dábe*

dábes

(28) The first form is used with a male subject and the second with a female subject: *êuk esan-dok* 'thou hast said it (male addressee)', *êuk esan-dona* 'thou hast said it' (female addressee). These forms are only used by old speakers.

The initial /d-/ represents a third person absolutive, as in present tense intransitive forms; with the difference that the absolutive is the subject of intransitive verbs but the direct object of transitive verbs. The transitive subject (ergative) is marked by suffixes in this paradigm: /-t/ = 1st sg, /-Ø/ = 3rd sg, /-gu/ = 1st pl, /-su/ = 2nd (sg), /-su-e*/ = 2nd pl, /-e*/ = 3rd pl. From a comparative point of view, it is interesting to note that, in the paradigm for a third person plural direct object (right column), the irregular *dixus* actually is a remnant of an older paradigm which is used in all non-Biscayan dialects as well as in older Biscayan (cf. Michelen 1981) where pluralization of the object is marked by an infix /-it-/ (cf. St. Basque, e.g. (*ikusi*) *dut* 'I have (seen) it', (*ikusi*) *d-it-ut* 'I have (seen) them', etc.). Pluralization by /-s/ in this paradigm is an innovation found throughout Biscayan; although competing with forms with /-it-/ are often found in the same variety. Notice that *dixus* presents in fact both the older and the newer object plural marker. The plural /-it-/ is also used in Lekeitio in forms where the direct object is a first or second person, as we will see below.²⁹

The form for a third person plural subject *dábe* shows consonantization of an intervocalic high vocoid /d-a-u-e*/. The same consonantization takes place when the form *dau* is followed a complementizer; e.g.: *dabela* 'that s/he has' (vs. *dabéla* 'that they have). There are also bivalent transitive forms (ergative-absolutive) where the absolutive is a first or second person. The columns are organized by subject (ergative) and the numbers across from left to right refer to the person of the direct object:

(154) Present indicative for a 1st or 2nd person DO

1.	2f.	1'.	2.	2'.
1.			<i>saittut</i>	<i>saittúet</i>
3. <i>nau</i>	<i>nauk</i>	<i>gaittu(s)</i>	<i>saittu(s)</i>	<i>saittúe</i>
1'.			<i>saittugu</i>	<i>saittugu</i>
2. <i>nasu</i>		<i>gaittusu(s)/</i>		
		<i>gaittus</i>		
2'. <i>nasúe</i>			<i>gaittusúe(s)</i>	
3'. <i>nábe</i> ³⁰			<i>gaittúe(s)</i>	

Examples: *ikusi nau* 'he has seen me', *ikusi saittugu* 'we have seen you'.

The transitive auxiliary also possesses trivalent forms (ergative-absolutive-dative) in the present indicative. In these trivalent forms the absolutive argument is always a third person, singular or plural. It should be noted that, for the case where the indirect object is a first person singular or plural, there are no distinct trivalent forms, but bivalent forms are used instead. In the tables in (155)-(156), forms in a

(29) For the neighboring variety of Bolibar, Gaminde (1988: 247) has found forms bearing the pluralizer /-itu/ in the first and third persons singular and plural, but not in forms for a second person subject. For Ondarroa, on the other hand, Gaminde gives a first person singular form with two pluralizers *doxuas* < **do-itu-da-s* 'I V them', but forms with plural -s for all other subject persons, e.g.: *dau* 's/he Vs them'. The replacement of the pluralizer /-it-/ in this paradigm by the more general /-s/, then, appears to have followed different paths in different (even neighboring) varieties. On the other hand, /-it-/ is still found throughout the Biscayan area in bivalent transitive forms where the absolutive is a first or second person plural (cf. Gaminde 1988).

(30) /n-a-u-e*/., with consonantization of the intervocalic high vocoid.

given column have the same indirect object and forms on a given horizontal row have the same subject:

(155) Present indicative trivalent forms for a 3rd sing DO

	1.	3.	1'.	2.	2'.	3'.
1.		dotzat		dotzut	dotzuet	dotzate
2f.	<i>nauk</i>					
3.	<i>nau</i> ³¹	dotzo	gaittu(s)	dotzu	dotzue	dótze
1'.		dotzagü		dotzugu	dotzugu	dotzagü
2.	<i>nasu</i>	dotzasu	gaittusu			dotzasu
2'.	<i>nasue</i>	dotzasue	gaittusue			dotzasue
3'.	<i>nábe</i>	dótze	gaittue	dotzue	dotzue	dótze

Examples: *lagunak liburúa emon nau* 'the friend has given me the book', *liburúa emon dotzat lagunari* 'I have given the friend the book'.

(156) Present indicative trivalent forms for a 3rd pl DO

	1.	3.	1'.	2.	2'.	3'.
1.		dotzaras		dotzuras	dotzuéras	dotzátes
3.	<i>nittus</i>	dotzos	gaittus	dotzus	dotzues	dótzes
1'.		dotzagus		dotzugus	dotzugus	dotzagus
2.	<i>nasus</i>	dotzasus	gaittusus			dotzasus
2'.	<i>nasues</i>	dotzasues	gaittusues			dotzasues
3'.	<i>nábes</i>	dótzes	gaittues	dotzues	dotzues	dótzes

Examples: *Górkak liburúak emon nittus* 'Gorka has given me the books'.

The loss of the original trivalent forms for first person indirect objects is characteristic of the Lekeitio variety, and it is not found in neighboring varieties such as Ondarroa (Gaminde 1988: 247-248, Rotaetxe 1978). For second and third person indirect objects, on the other hand, the distinction has been preserved in Lekeitio. Thus whereas in both *ikusi nau* 's/he saw me' and *liburúa emon nau* 's/he gave the book to me' the same (formally bivalent) auxiliary is used, in *ikusi saittut* 'I saw you' and *liburúa emon dotzut* 'I gave the book to you' different forms of the auxiliary are employed.³²

A related phenomenon is that, in bivalent constructions where the direct object is a human third person, trivalent forms are sometimes used instead of bivalent forms, and the direct object is marked as dative. Consider the following examples: *liburúa ikusi dot* 'I have seen the book', but *neskiari ikusi dotzat* 'I have seen the girl' (= *neskia ikusi dot*), with the same marking as *neskiari liburúa emon dotzat* 'I have given the book to the girl'. This is rather more frequent with a second person direct object;

(31) As in the form *dau*, the final glide is consonantized as a bilabial fricative when a suffix is added; e.g.: *emon naben liburúa* 'the book that s/he has given me'.

(32) The (partial) merging between direct and indirect objects in verbal morphology and case marking is a phenomenon known as 'solecism of the coast' which is found in a number of coastal towns as far away as Hondarribia on the eastern boundary of Gipuzkoa and Saint Jean de Luz (Donibane-Lohizune) in Labourd, although Lekeitio appears as an isolated point in presenting it (since it is not found in neighboring towns). This phenomenon has, moreover, different realizations in different varieties.

e.g.: *suri ikusi dotzut* 'I saw you' instead of *su ikusi saittut*. This marking of human direct objects as dative, in which the influence of the Spanish model is apparent, is a geographically much more widespread phenomenon than the one mentioned in the previous paragraph.

Past indicative. The past tense forms corresponding to those above in (153) are given in (157):

(157) Past indicative bivalent transitive forms for a 3rd person DO

	abs 3rd sg	abs 3rd pl		
1.	<i>neban</i>	<i>nebasan</i>	2.	<i>senduan</i> <i>sendusan</i>
3.	<i>eban</i>	<i>ebasan</i>	2'.	<i>sendúen</i> <i>sendúsen/sendúesen</i>
1'.	<i>genduan</i>	<i>gendusan</i>	3'.	<i>ebén</i> <i>ebésen</i>

Examples: *ikusi genduan* 'we saw him/her/it', *ikusi gendusan* 'we saw them'

As in all Basque dialects, the coding of subject and direct object in the past tense of the transitive auxiliary is different from that found in the present. Unlike in the present, where the transitive subject is marked by suffixes, in the past transitive auxiliary, the ergative subject is marked by prefixes, like intransitive subjects. Third person subjects are indicated by lack of a prefix in most Biscayan varieties, whereas in other dialects they are marked by *z-* in this paradigm (e.g.: Lek. *eban* = St. B. *zuen*). The third person singular direct object is left unmarked, whereas when the direct object is a plural third person there is a plural suffix */-s/*. Non-Biscayan dialects have a plural marker */-it-/* in this paradigm (e.g.: Lek. *ebasan* = St. B. *zituen*).³³

Past tense bivalent transitive forms for a first or second person direct object are formed by adding *-(e)n* to the corresponding present tense forms in (155)-(156), with some minor modifications. In (158), all forms in a column have the same direct object and all forms in a given row have the same subject:

(158) Past indicative bivalent transitive forms for a first or second person DO:

1.	1'.	2.	2'.
1.		<i>saittuten</i>	<i>saittuéten</i>
3. <i>naben</i>	<i>gaittusen</i>	<i>saittun</i>	<i>saittúen</i>
1'.		<i>saittugun</i>	<i>saittuégun</i>
2. <i>nasun</i>	<i>gaittusun</i>		
2'. <i>nasúen</i>	<i>gaittusúen</i>		
3'. <i>náben</i>	<i>gaittúsen</i>	<i>saittúen</i>	<i>saittúen</i>

Examples: *ikusi nasúen* 'You-pl have seen me', *ikusi saittuéten* 'I have seen you-pl'

Unlike in the present, there are morphologically distinct trivalent forms for a third person singular direct object for all dative persons. In (159)-(160), forms in a column share the same indirect object and forms on a row share the same subject:

(33) The pluralizer */-it-/* is also found in some Biscayan varieties, in at least some forms of the paradigm; e.g. Ondarroa *sitzun* = St. B. *zituen* (Gaminde 1988: 247).

2'. <i>eustasúen</i>	<i>eutzasúen</i>	<i>euskusúen</i>		<i>eutzasúen</i>	
3'. <i>eustésen</i>	<i>eutzésen</i>	<i>euskúesen</i>	<i>eutzuésen</i>	<i>eutzuésen</i>	<i>eutzésen</i>

In the forms in (159)-(160), the subject is marked by means of a prefix /n-/ only for first person singular subjects; for all other persons, it is encoded by a suffix.

In the paradigm for plural direct objects, there is variation *e* ~ *a* in the vowel that appears between the pluralizer *-s* and the past marker *-n*. This epenthetic vowel surfaces as *e* if the preceding vowel is also *e*. If another vowel precedes, then it may variably be realized as either *a* or *e*.

Although there are distinct trivalent forms for all person combinations (unlike in the present), formally bivalent forms are frequently used when the indirect object is a first person singular or plural. In fact bivalent forms are more frequent than trivalent ones in this case. Most trivalent forms with a first person, singular or plural, dative argument are very rare, bivalent forms being preferred in this case: *Péruk liburúa emon eustan* or (more commonly) *Péruk liburúa emon naben* ‘Peru gave me the book’; *Péruk liburúa emon gaittusen* ~ *euskun* ‘Peru gave us the book’; *lagúnak liburúak emon gaittusen* ‘our friends gave us the books’ (much more common than *emon euskúesen*). Conversely, trivalent forms can be used when the direct object is animate, as was mentioned above for the present forms: *Péruk ikusi naben* ~ *eustan* ‘Peru saw me’, *su ikusi saittutem* ~ *suri ikusi neutzun* ‘I saw you’, *Kóldok žo saittun* ~ *eutzun* ‘Koldo hit you’, *Péruk ikusi eban* ~ *eutzan* ‘Peru saw him/her’.

Conditional. Bivalent transitive conditional forms for a third person direct object are given in (161):

(161) Conditional

3rd sg DO		3rd pl DO	
Protasis	Apodosis	Protasis	Apodosis
1. <i>banéuko</i>	<i>neuko</i> ³⁴	<i>banéukos</i>	<i>neukos</i>
3. <i>baléuko</i>	<i>leuko</i>	<i>baléukos</i>	<i>leukos</i>

(34) There are alternative forms *neuke* and *leuke*, although they are much less frequent than *neuko*, *leuko*. Cf. 3.2.2.4.

1'. <i>bagendúkel</i>	<i>genduke</i>	<i>bagendúkes/</i>	<i>gendukes</i>
	<i>bagendukíe</i>	<i>bagendukíes</i>	
2. <i>basendúke</i>	<i>senduke</i>	<i>basendúkes</i>	<i>sendukes</i>
2'. <i>basendukíe</i>	<i>sendukíe</i>	<i>basendukíes</i>	<i>sendukíes</i>
3'. <i>baleukíe/</i>	<i>leukíe</i>	<i>baleukíes/</i>	<i>leukíes</i>
	<i>baléuke</i>	<i>baléukes</i>	<i>léukes</i>

Examples: *ikusíko banéuko ekarríko neuko* 'If I saw it, I would bring it'

As in the intransitive auxiliary, conditional forms are morphologically related to past forms, with the particularity that the third person singular subject marker is /l-/. The past ending is replaced by /-ko/ in forms for singular subjects and /-ke/ when the subject is morphologically plural. The direct relation between past and conditional is clear, e.g.: *neban (neu-an) neu-ko; eban (eu-an) l-eu-ko; gendu-an gendu-ke*.³⁵

Instead of the conditional forms, past tense forms can be used in both the protasis and the apodosis (the form in the protasis receiving always an accent): *Péruk ekarríko baléuko/ba ban ikusíko senduke/senduan* 'If Peru brought it, you would see it'.

In the protasis paradigm there are bivalent transitive forms for a first or second person direct object, which are identical to the past indicative forms with the prefix /ba-*-/:

(162) Conditional protasis forms for a 1st or 2nd person DO

1.	1'.	2.	2'.
1.	<i>basaittúten</i>	<i>basaittu�ten</i>	
3. <i>banáben</i>	<i>bagáittun</i>	<i>basáittun</i>	<i>basaittúen</i>
1'.	<i>basaittúgun</i>	<i>basaittúgun</i>	
2. <i>banásun</i>	<i>bagaittúsun</i>		
2'. <i>banasúen</i>	<i>bagaittusúen</i>		
3'. <i>banáben</i>	<i>bagaittúen</i>	<i>basaittúen</i>	<i>basaittúen/basaittu�sen</i>

The forms used in the apodosis when the direct object is a first or second person are those of the past indicative. The same trivalent forms that are used in the past indicative are also optionally used both in the protasis and the apodosis of conditional structures. There are, nevertheless, some specifically conditional forms, which can be used in either clause of the conditional structure (with /ba*-/- 'if' in the protasis). As before, forms on the same horizontal line share the same subject:

(163) Trivalent conditional forms for a 3rd sg DO

1.	3.	1'.	2.	2'.	3'.
1.	<i>neuki�o</i>		<i>neukixu</i>	<i>neukix�e</i>	<i>neuk�ze</i>
3. <i>leuko</i>	<i>leuki�o/leuko</i>	<i>leuko</i>	<i>leukixu</i>	<i>leukix�e</i>	<i>leuk�ze</i>
1'.	<i>leukigu</i>	(<i>geunkixu</i>) ³⁶	(<i>geunkix�e</i>) ³⁶	<i>leukigu</i>	
2. <i>senduke</i>	<i>senduke</i>	<i>senduke</i>			<i>senduke</i>
2'. <i>senduk�e</i>	<i>senduk�e</i>	<i>senduk�e</i>			<i>senduk�e</i>
3'. <i>leuk�e</i>	<i>leuk�ze</i>	<i>leuk�e</i>	<i>leukix�e</i>	<i>leukix�e</i>	<i>leuk�(�)</i>

(35) Nevertheless, there is some overlap between these forms of the transitive auxiliary and the conditional forms of the synthetic verb *euki* 'to have'.

(36) These two forms in parenthesis are only known to older speakers. Other speakers use instead the past indicative form *eutzugun* for both forms.

In the apodosis these forms may add a final /-n/. As can be seen, there is massive homophony in this paradigm. We can then hardly talk of a trivalent paradigm here, given the fact that some arguments are not encoded. When an argument is not encoded in the auxiliary it needs to be expressed pronominally; e.g.: *suk ekarriko senduke guri* 'you would bring it to us'; *suk ekarriko senduke niri* 'you could bring it to me'; *éurak emónigo leukié niri* 'they could give it to me'.

Potential. The potential paradigm has undergone massive simplification in Lekeitio. As was mentioned, many of the same forms are used both in the intransitive and transitive potential paradigms. In addition, in the transitive potential, the distinction between bivalent and trivalent forms has been blurred. The following are used as bivalent transitive present potential forms:

(164) Present potential

3rd sg DO	3rd pl DO		
1. <i>néike(t)/léiket</i>	<i>néikes/leikédas</i>	2. <i>leikíxu</i>	<i>leikíxus</i>
3. <i>léike</i>	<i>léikes</i>	2'. <i>leikixúe</i>	<i>leikixúes</i>
1'. <i>leikígu</i>	<i>leikígus</i>	3'. <i>leikí(z)e</i>	<i>leikí(z)es</i>

Examples: *erosi leikíxu* 'you can buy it' (also 's/he can buy it for you').

As can be seen, in this paradigm there is inconsistency in the marking of the arguments. A first person singular subject can be marked with a prefix *n-* (*néike*), with a suffix *-t* (*léiket*) or indeed with both, since *néiket* is also found. All the forms of the bivalent paradigm in (164) can, furthermore, be used as trivalent forms.

The complete table of present potential transitive forms is given in (165). In this table, forms on a row have the same subject. The numbers on the columns indicates the direct object, when the forms are used as bivalent, or the indirect object if the forms are used as trivalent (in which case there will be a third person direct object):

(165) Present potential bivalent/trivalent forms

1.	3.	1'.	2.	2'.	3'.
1.	<i>néike(t)/</i> <i>leikízot</i> ³⁷		<i>neikíxu(t)/</i> <i>leikíxut</i>	<i>neikixúe(t)/</i> <i>leikixúet</i>	<i>neikíz(e)(t)/</i> <i>leikíz(e)t</i>
3. <i>léike</i>	<i>leikížo</i>	<i>leikígu/</i> <i>léike</i>	<i>leikíxu/</i> <i>léike</i>	<i>leikixúel/</i> <i>leikíz(e)</i>	<i>leikíže</i>
1'. <i>leikígu</i>		<i>leikígu</i>	<i>leikígu</i>	<i>leikígu</i>	
2. <i>leikíxu</i>	<i>leikíxu</i>	<i>leikíxu</i>			<i>leikíxu</i>
2'. <i>leikixúe</i>	<i>leikixúe</i>	<i>leikixúe</i>			<i>leikixúe</i>
3'. <i>leikí(z)e</i>	<i>leikí(z)e</i>	<i>leikí(z)e</i>	<i>leikixúe</i>	<i>leikixúe</i>	<i>leikí(z)e</i>

It can be observed that the agreement system is seriously eroded in this paradigm. Many forms in the table do not encode agreement with an indirect object or a non-third direct object. For other combinations of arguments, forms showing full agreement alternate with others with less rich morphology. Arguments which are not encoded on the auxiliary need to be identified contextually. Instead of *neskiari*

(37) Also *léiket* and *neikízot*.

liburúa emon leikízot 'I can give the book to the girl' where all arguments are encoded in the auxiliary (*l-* = 3. abs, *-ižo* = 3. dat, *-t* = 1. erg), constructions such as *neskiari liburúa emon néike ~ léiket* 'I can give the book to the girl', where the dative argument is not encoded, are also common. Similarly, a form such as *léike*, which only marks a third person subject can be used with several other non-subject arguments: *lagunak atrapa leikígu ~ lagunak gu(ri) atrapa léike* 'the friend can catch us', *neskiak liburúa niri emon léike* 'the girl can give me the book'. Person markers do not consistently indicate a given grammatical function. For instance, in a form such as *leikíxu*, the ending *-xu* indicates a second person argument which may be the subject, the direct object or the indirect object.

When the direct object is plural, a final /-s/ is added to the forms in (165) (final *-t* being replaced by *-das*).

The past or hypothetical tense of the potential is obtained adding a final *-(e)n* to the present tense potential forms; e.g.: *emon neikén* 's/he could give it to me', *atrapa leikígun* 's/he could catch us'.

Present subjunctive. Subjunctive forms are created by adding a suffix /-n/ to corresponding indicative forms. There are, however, special present subjunctive bivalent forms for a third person direct object. In (166) these special subjunctive forms are shown together with the alternative forms that arise by simple addition of /-n/ to the indicative:

(166) Present subjunctive

	3rd sg DO	3rd pl DO	
1.	<i>neižen</i> /	<i>doten</i>	<i>neižesen</i> / <i>dorasen/dotesen</i>
3.	<i>deižen</i> /	<i>daben</i>	<i>deižesen/-an</i> / <i>dabesen/(ditxusen)</i>
1'.	<i>deigun</i> /	<i>dogun</i>	<i>deigusan</i> / <i>dogusan/-an</i>
2.	<i>deixun</i> /	<i>dosun</i>	<i>deixusen/-an</i> / <i>dosusen/-an</i>
2'.	<i>deixuéen</i> /	<i>dosúen</i>	<i>deixuésen</i> / <i>dosuésen</i>
3'.	<i>déižen</i> /	<i>dáben</i>	<i>deižésen</i> / <i>dabésen</i>

For all other argument combinations, indicative forms suffixed with /-n/ are employed. Nonconjugated clauses are, in any case, much more frequent than subjunctive clauses.

Imperative. In true imperatives, the subject will be a second person singular or plural. As was mentioned with respect to the intransitive auxiliary, in the imperative we find the only morphological remnants of the old second person familiar which are still in use among the younger generations. The following forms are used as transitive bivalent imperative forms for a third person direct object:

(167) Transitive bivalent imperative forms for a 3rd person DO

	3rd sg DO	3rd pl DO
2f.	<i>éižok/éižona/ik</i>	<i>éižonas</i>
2.	<i>éixu</i>	<i>éixus</i>
2'.	<i>eixué</i>	<i>éixues</i>

The forms *éižok* and *éižona* encode an original morphological distinction which refers to the gender of the subject; e.g.: *artúižok* 'take it' (male addressee), *artúižona* 'take it' (female addressee). Nowadays, however, they are used indistinctively, all conscience of the functioning of the earlier familiar forms having been lost. The initial vowel in these forms is usually lost, except in negative forms; e.g.: *es éižok erosi* 'do not buy it'.

The other imperative familiar form, *ik*, appears to be a reduced form of *e(g)ik*, which originally would be a masculine familiar command of the same paradigm as *é(g)ixu* and *é(g)ixue* (all being forms of *egin* 'to do, make', used as an auxiliary in the imperative). These imperative forms function as accented suffixes, causing the main verb to which they attach to receive an accent on the penultimate; e.g.: *atrápaik* 'catch it!', *úrteik* 'leave!', *apúrtuik* 'break it!'. The forms *éixu*, *eixue* lose their initial vowel in postverbal position; e.g.: *apurtúixu* 'break it!' (but *es éixu apurtu* 'don't break it!'), *garbittúixu* 'clean it!' *žáixu* 'eat it!'.

In imperatives where the direct object is a first person, subjunctive forms are used (i.e. indicative forms with the suffix /-n/):

(168) Transitive bivalent imperative forms for a 1st person DO

1st sg DO	1st pl DO
2. <i>nasun</i>	<i>gaittusun</i>
2'. <i>nasúen</i>	<i>gaittusúen</i>

Example: *etxera eruan gaittusun* 'take us home'.

There are special trivalent imperative forms for a third person dative. For a first person dative, bivalent forms can be used:

(169) Transitive trivalent forms for a 3rd sg DO

1.	3.	1'.	3'.
2. <i>nasun</i>	<i>eižotzasu</i>	<i>gaittusun</i>	<i>éižotzasu</i>
2'. <i>nasúen</i>	<i>eižotzasúe</i>	<i>gaittusúen</i>	<i>éižotzasue</i>

(170) Transitive trivalent forms for a 3rd pl DO

1.	3.	1'.	3'.
2. <i>nasusen</i>	<i>eižotzasus</i>	<i>gaittusun</i>	<i>éižotzasus</i>
2'. <i>nasúesen</i>	<i>eižotzasúes</i>	<i>gaittusúen</i>	<i>éižotzasues</i>

Examples: *emôn nasun* 'give it to me!', *emôn nasúesen* 'give them to me (pl addressee)', *emôižotzasu* 'give it to him/her/them!', *es éižotzasu emon* 'don't give it to him/her/them!', *emôižotzasus* 'give them to him/her/them!'.

Dative arguments are frequently left unmarked in the imperative: *es éixu emon gixonari* 'do not give it to the man' (or *es éižotzasu emon*), *es éixu emon niri* 'do not give it to me' (or *es nasun emon*).

3.2.2.4. Synthetic transitive verbs

Only five transitive verbs have synthetic forms in the present tense: *eruan* 'to carry', *euki* 'to have', *ekarri* 'to bring', *žakiñ* 'to know' and a root /-ino*/ 'to say' which lacks a participial form.³⁸ Only present forms for a third person direct object are in current use:

(171) Present indicative of synthetic transitive verbs

	<i>eruan</i> 'to take, carry'	<i>euki</i> 'to have'	
	3 sg DO 3 pl DO	3 sg DO 3 pl DO	
1.	<i>daróyat</i> ³⁹	<i>daroyádas</i>	<i>daukat/daukot</i>
3.	<i>daróya</i>	<i>daróyas</i>	<i>dauko</i>
1'.	<i>daroyágu</i>	<i>daroyágus</i>	<i>daukogu</i>
2.	<i>daroyásu</i>	<i>daroyásus</i>	<i>daukosu</i>
2'.	<i>daroyasúe</i>	<i>daroyasúes</i>	<i>daukosué</i>
3'.	<i>daróye</i>	<i>daróyes</i>	<i>dáuke</i>
	<i>ekarri</i> 'to bring'	<i>žakiñ</i> 'to know'	
1.	<i>dakart</i>	<i>dakadas</i> ⁴⁰	<i>dakitx</i>
3.	<i>dakar</i>	<i>dakas</i>	<i>daki</i>
1'.	<i>dakagu</i>	<i>dakagus</i>	<i>dakigu</i>
2.	<i>dakasu</i>	<i>dakasus</i>	<i>dakixu</i>
2'.	<i>dakasúe</i>	<i>dakasúes</i>	<i>dakixué</i>
3'.	<i>dakárre</i>	<i>dakárres</i>	<i>dakíže</i>
	/-ino*/ 'to say'		
1.	<i>díñot</i>	<i>díñodas</i>	<i>díñosu</i>
3.	<i>díño</i>	<i>díños</i>	<i>díñosue</i>
1'.	<i>díñógu</i>	<i>díñogus</i>	<i>díñue</i>

All paradigms have the same structure: /d-/ 'third person absolutive', /a-/ 'tense marker' (absent with /-ino*/), root /-ro(y)a-*/ 'take', /-uk-/ 'have', /-karr-/ 'bring', /-ki-/ 'know', /-ino*/ 'to say' and ergative marker (1. /-t/ (/d-), 1'. /-gu/, 2. /-su/), which is followed by a pluralizer in 2'. /su-e*/ and 3'. /e*/. A plural direct object is indicated by a suffix /-s/. The verb /-ino*/ possesses some trivalent forms:

(172) Trivalent present tense forms of /-ino*/ 'to say'

3 sg DO					
1.	3.	1'	2.	2'.	3'.
1.		<i>díñotzat</i>		<i>díñotzut</i>	<i>díñotzúet</i>
3. (<i>díñosta</i>)	<i>díñotzo</i>	<i>díñosku</i>	3.	<i>díñotzu</i>	<i>díñotzúe</i>
1'.		<i>díñotzágu</i>	1'.	(<i>díñotzúgu</i>) (<i>díñotzúegu</i>)	<i>díñotzágu</i>
2.	<i>díñostásu</i>	<i>díñotzásu</i> (<i>díñoskusu</i>)	2.		<i>díñotzásu</i>
2'.	<i>díñostasúe</i>	<i>díñotzasúe</i> (<i>díñoskusúe</i>)	2'.		<i>díñotzasúe</i>
3'.	(<i>díñoste</i>)	<i>díñotze</i>	3'.	<i>díñotzúe</i>	<i>díñotze</i>

(38) In analytical forms, the meaning of 'to say' is expressed by *esan*. E.g. *díñot* 'I say', but *esan dot* 'I have said'.

(39) Alternative forms are *daróit*, *daróigu*, *daróisu/daroízu*, *daroisúe/daroíxúe*.

(40) This ending is most frequently pronounced [-aras] in all paradigms.

Forms in parentheses are rare. Gaps in the paradigm are filled by analytical forms with *esan* 'to say'; e.g.: *esaten násu* 'you are telling me', *esaten gáitxus* 's/he is telling us'. Forms for a third person plural direct object are created by adding a final *-s* (final *-t* being replaced by *-das*); e.g.: *diñotzúdas* 'I am saying them to you', *diñótzos* 's/he is saying them to him/her'. For all other four synthetic transitive verbs, there are trivalent forms for a third person singular subject and a second person dative, which may be an 'ethical dative', rather than a real indirect object argument:

- (173) Trivalent present tense forms for other transitive synthetic verbs
eruan: *daroyátsu* 's/he is taking it to you', *daroyatzúe* 's/he is bringing it to you-pl'.⁴¹
euki: *daukotzu* 's/he has it for you', *daukotzúe* 's/he has it for you-pl'.
ekarri: *dakartzu* 's/he is bringing it to you', *dakartzúe* 's/he is bringing it to you-pl'.
žakiñ: *dakitzu* 's/he knows it for you', *dakitzúe* 's/he knows it for you-pl'.

Present tense forms of *euki* for a third person subject with the subordinating suffix */-la/* are used in subjunctive and optative expressions (together with the verbal noun, cf. section 3.2.3.11). The following bivalent and trivalent forms of *euki* are used in those constructions (gaps in the paradigm are filled by the transitive auxiliary):

- (174) Bivalent subjunctive forms of *euki*

1.	3.	3'.	1.	3.	3'.
3. naukola	daukola	daukosela	3'. naukéla	daukéla	daukeséla

Examples: *eruatía naukola* 'may s/he take me', *žatía daukola* 'may s/he eat it', *erostía daukosela* 'may s/he buy them', *eskribidutía daukéla* 'may they write it'.

- (175) Trivalent subjunctive forms of *euki* for a 3rd sg DO

1.	3.	(1').	2.	2'.	3'.
3. naukola	daukotzola		daukotzula	daukotzuéla	daukotzéla
3'. naukéla	daukotzéla		daukotzúela	daukotzúéla	dauketzéla

Examples: *emotía daukotzéla* 'may s/he give it to them' or 'may they give it to him/her/them', *emotía daukotzuéla* 'may s/he/they give it to you-pl' or 'may they give it to you-sg'. As mentioned, for those person combinations lacking a special form with *euki*, the corresponding forms of the transitive auxiliary are used; e.g.: *emotía gaittusela* 'may s/he give it to us', *emotía gaittuséla* 'may they give it to us'.

- (176) Trivalent subjunctive forms of *euki* for a 3rd pl DO

1.	3.	(1').	2.	2'.	3'.
3. naukosela	daukotzosela		daukotzusela	daukotzueséla	daukotzeséla
3'. naukeséla	daukotzeséla		daukotzueséla	daukotzusela	dauketzeséla

Only *euki* 'to have' and *žakiñ* 'to know' possess synthetic past tense paradigms, whereas *ekarri* 'to bring' has an incomplete paradigm:

(41) Or *daroítzu*, *daroitzúe*.

(177) Past indicative of synthetic transitive verbs

<i>euki</i>	<i>žakiñ</i>		
3rd sg DO	3rd pl DO	3rd sg DO	3rd pl DO
1. <i>neukan</i>	<i>neukasan</i>	<i>nekižan</i>	<i>nekižasan</i>
3. <i>eukan</i>	<i>eukasan</i>	<i>ekižan</i>	<i>ekižasan</i>
1'. <i>eukaun</i>	<i>eukausan</i>	<i>genkiun/ekiun</i>	<i>genkiusan/ekiusan</i>
2. <i>eukasun</i>	<i>eukasusan</i>	<i>ekixun</i>	<i>ekixusan</i>
2'. <i>eukasién</i>	<i>eukasúesen</i>	<i>ekixúen</i>	<i>ekixúesen</i>
3'. <i>éuken</i>	<i>eukésen</i>	<i>ekižen</i>	<i>ekižésen</i>
<i>ekarri</i>			
1. <i>nekarren</i>			
3. <i>ekarren</i>			
3'. <i>ekárren</i>			

In these paradigms, only first person singular subjects are marked with a prefix, while other subjects are encoded by means of a suffix. This is with one exception. In forms of *žakiñ* such as *genkiun*, the first person plural subject appears to be marked twice, by a prefix /-gen/ and a suffix /-(g)u/: /gen-ki-gu-n/. In addition, the verb *euki* possesses conditional forms which are partly identical to those of the transitive auxiliary:

(178) Conditional forms of *euki*

3rd sg DO	3rd pl DO	3rd sg DO	3rd pl DO
1. <i>neuko</i>	<i>neukos</i>	2. <i>leukasu</i>	<i>leukasus</i>
3. <i>leuko</i>	<i>leukos</i>	2'. <i>leukasúe</i>	<i>leukasúes</i>
1'. <i>leukagu</i>	<i>leukagus</i>	3'. <i>leuké/léuke</i>	<i>leukés/léukes</i>

Examples: *diru asko baleukágu...* 'if we had a lot of money'

3.2.2.5. Allocutive conjugation

In Basque Linguistics, allocutivity is the term that is used to refer to the morphological encoding of the addressee in verbal inflection when it is not an argument of the verb. In western dialects, allocutivity is restricted to the familiar treatment, where different forms are used depending on whether the addressee is male or female. For instance, in Standard Basque, corresponding to the nonallocutive *Miren etorri da* 'Miren has come', we find the allocutive *Miren etorri duk* 'Miren has come, familiar, male addressee' and *Miren etorri dun* 'Miren has come, familiar, female addressee'; and corresponding to the nonallocutive *nik ekarri dut* 'I have brought it', we find *nik ekarri diat* 'I have brought it, familiar, male addressee' and *nik ekarri dinat* 'I have brought it, familiar, female addressee'.⁴² In Lekeitio the general loss of the familiar treatment has brought with it the disappearance of the allocutive conjugation. Some forms are still used or remembered by older speakers, but these are only isolated forms without any systematicity. Some forms still in use are the following:

(42) For a recent treatment of allocutivity in Basque, cf. Oyharçabal (1993).

(179) 'to be' / intransitive auxiliary

	nonallocutive	alloc. masc.	alloc. fem.
'I am'	<i>naix/nas</i>	<i>nauk/nok</i>	
's/he is'	<i>da</i>	<i>dok/žok</i>	<i>dona/žona</i>
'they are'	<i>diras</i>	<i>žosak</i>	

Examples:

- Gôrka etorri dok* 'Gorka has come'
êurak allaga žosak 'they have arrived'
nêu ibilli nok 'I have walked'
ori žonâ emakume feia 'that is an ugly woman'

(180) Transitive auxiliary

	nonallocutive	alloc. masc.	alloc. fem.
'I have it'	<i>dot</i>	<i>žu(a)t</i>	
's/he has it'	<i>dau</i>	<i>žu(a)k</i>	<i>žu(a)n</i>
'they have it'	<i>dábe</i>	<i>žuek</i>	

Examples:

- âu entzun žut* 'I have heard this' *es žât esan ori* 'I have not said that'

(181) *egon* 'to be, to stay'

	nonallocutive	alloc. masc.	alloc. fem.
'I am'	<i>nago</i>	<i>naižaok</i>	
's/he is'	<i>dago</i>	<i>žagok</i>	
'they are'	<i>dagos</i>	<i>žagosak</i>	
<i>ibilli</i> 'to walk'			
's/he walks'	<i>dabill</i>	<i>žabilk</i>	

As can be seen only a very reduced number of allocutive forms are still used or remembered, even by old speakers. In addition, speakers who know (some of) these forms are often uncertain about their meaning. Thus, speakers may fail to distinguish between, for instance, the nonallocutive second person familiar form *abill* 'thou walkest' and the allocutive *žabilk*, whose original meaning must have been 's/he walks, familiar, masculine addressee'. Similarly, some speakers think that the difference between *dok* and *dona* has to do with the gender of the subject ('he is' vs. 'she is') instead of with the gender of the addressee, as must have been originally and still is in dialects which maintain the allocutive conjugation.

3.2.3. Tense, aspect and mood: Basic forms

Verbal expressions can be classified in two groups: basic and periphrastic forms. Basic verb forms consist of a participle (perfective, imperfective or future) and a conjugated form of the auxiliary, transitive or intransitive, depending on the verb. Except that there are a few verbs for which some simple tenses are formed synthetically without the help of an auxiliary, as was mentioned. There are five formally distinct moods: indicative, conditional, potential, subjunctive and imperative. The

following basic forms can be recognized (examples are given with an intransitive and a transitive verb):

Indicative

Present indicative: *žaustén-nas*⁴³ 'I fall/ am falling'; *erostén-dot* 'I buy/ I am buying'

Present Perfect/Recent Past: *žausi-nas* 'I have fallen/I fell'; *erosi-dot* 'I (have) bought'

Aorist: *žausi-nitzan* 'I fell', *erosi-neban* 'I bought'

Imperfect: *žausten-nítzan* 'I fell/I was falling/I used to fall'; *erosten-néban* 'I bought/...'

Future: *žausikó-nas* 'I will fall'; *erosikó-dot* 'I will buy'

Future of the Past: *žausiko-nítzan* 'I would fall'; *erosiko-néban* 'I would buy'

Conditional

Present Condition

Protasis: *žausíko-banitzatéke* 'If I fell'; *erosíko-banéuko* 'If I bought'

Apodosis: *žausíko-nitzateke* 'I would fall'; *erosíko-neuko* 'I would buy'

Failed/Hypothetical Condition

Protasis: *žausi-banítzan* 'If I had fallen'; *erosi-banéban* 'If I had bought'⁴⁴

Potential

Present Potential: *žausi-néike* 'I can fall'; *erosi-néike* 'I can buy'

Past/Hypothetical Potential: *žausi-neikien* 'I could fall'; *erosi-neikien* 'I could buy'

Subjunctive

Present subjunctive: *žausi-naixen/nasen* '(that) I fall'; *erosi-neižen/doten* '(that) I buy'

Imperative

Imperative: *žausí-saix* 'fall!'; *erosíxu* 'buy!'

Periphrastic forms are created with the help of some other verb. There is a Progressive construction with *egon* 'to be, stay' with is used in a number of tenses: *žáusten/erósten nago* 'I am falling/buying', *žáusten/eróstten egongó-nas* 'I will be falling/buying', etc. With *ibilli* 'to walk' a Habitual construction is formed, also in several tenses: *žáusten/eróstten ibilli-nas* 'I have been falling/buying', *žáusten/eróstten ibillikó-nas* 'I will be falling/buying'. A Resultative/Experiential periphrastic form employs *euki* 'to have' and the adjectival participle: *erosítta daukat* 'I got it bought', *erosítta eukíkot*⁴⁵ 'I will get it bought'. Another Experiential construction employs *egon* 'to be, stay' with the adjectival participle: *erosítta dago* 'it has been bought'. Finally, another periphrastic expression that can be mentioned is a Future with *žu(a)n* 'to go': *kantáten noya* 'I am going to sing', *kantáten žuan-nitzan* 'I was going to sing'.

(43) The accentuation given in all accented forms corresponds to the case where there is a focalized element in preverbal position; e.g.: *néu žaustén-nas*.

(44) Some speakers prefer *žausi ixan banítzan*, *erosi ixan banéban*.

(45) /euki-ko* dot/.

3.2.3.1. Present indicative

The present indicative consists of the imperfective participle and the present indicative form of the auxiliary. The present indicative usually has a habitual meaning. Unlike in Spanish (and like in English), the present indicative does not have a progressive meaning.⁴⁶

- (182) *laguna gure etxiān gelditzén-da* (183) *arraīñā saltzen-dábe*
 'our friend stays in our house' 'they sell fish'

For those few verbs which have a synthetic present, the synthetic present has a punctual meaning and the analytical present a habitual meaning:

- (184) a. *aitta datôr* b. *aitta irurêtan etortén-da biarrétk*
 'father is coming' 'father comes at three o'clock from work'
- (185) a. *liburûak dakárres* b. *liburûak ekartzen-dábes egunéro*
 'they are bringing the books' 'they bring the books every day'

The present tense (or the synthetic present) can also be used to express a near future:

- (186) *Ondârrun kóntra žokatzen-dógu bižar*
 'we play against Ondarroa tomorrow'
- (187) *bižar datôs* (188) *Agostuan Ameriketâra nôya*
 'they are coming tomorrow' 'I am going to America in August'

The present is also used as universal tense. In verbs with a synthetic present, the analytical form is used with this meaning:

- (189) *gixona tênte ibiltén-da*
 'man walks straight'

3.2.3.2. Present perfect/ Recent past

A tense which has the meaning of a present perfect (past action with relevance for the present) including the expression of actions that have taken place within the same time unit as the moment of speech (recent past) is constructed with the perfective participle and the present indicative form of the auxiliary:

- (190) *gaur goixian Gôrka ikusi-dot* (191) *Erromâ ikusi-dot*
 'I saw Gorka this morning' 'I saw Rome (recently)'
 'I have seen Rome' (experiential)⁴⁷

(46) An irregularity which is general in Basque is that the present tense of *bixi* 'to live' is formed with its perfective participle: *bixi nas* 'I live', *bixi ixan nas* 'I have lived'.

(47) For the experiential meaning a preferred, unambiguous, form is the resultative/experiential construction with *euki*, cf. 3.2.4.3.

- (192) *besuâ apurtu-dot gaur goixian*
 'this morning, I have broken (I broke) my arm'
- (193) *aurten arraiñ askô atrapa-dogu*
 'this year we have caught a lot of fish'
- (194) *aurten etxiâ saldu-dau*
 'this year s/he has sold his/her house'

3.2.3.3. Aorist

The aorist or nonrecent perfective past is formed with the perfective participle and the past indicative of the auxiliary:

- (195) *atzo Gôrka ikusi-neban* (197) *pasa dan urtian arraiñ askô atrapa-genduan*
 'yesterday I saw Gorka' 'last year we caught a lot of fish'
- (196) *pasa dan urtian Erromâ ikusi-neban*
 'last year I saw Rome'

3.2.3.4. Imperfect

The imperfect (imperfective past) consists of the imperfective participle and the past indicative of the auxiliary. The imperfect has a habitual meaning. Unlike in Spanish, the imperfect does not have a progressive meaning:⁴⁸

- (198) *pasa dan urtian Erromâ ikusten-néban astero*
 'last year I used to see Rome every week'
- (199) *arraiñ askô atrapaten-gendúan*
 'we used to catch a lot of fish'
- (200) *autobusa betî allagatén-san berandu*
 'the bus always arrived late'
- (201) *es-eutzân itxóten*
 's/he wasn't waiting for him/her'

The synthetic past has an imperfective meaning:

- (202) *atzo ikusí genduan gixonak gauza asko ekižasân*
 'the man we saw yesterday knew a lot of things'

(48) Thus a Spanish sentence such as *mi madre miraba la televisión cuando llegó* 'My mother was watching television when I arrived', where the imperfect *miraba* has a progressive meaning, cannot be translated in Lekeitio Basque as **nire amak telebisiñoyá ikusten éban ni allaga nitzanian* with the imperfect *ikusten éban*. Instead, it must be translated as *nire ama telebisiñoya ikústen ewan ni allaga nitzanian* with the progressive form *ikústen ewan*.

3.2.3.5. Future

The future tense consists of the future participle and the present indicative of the auxiliary:

- (203) *biżar Ondarrūra žungó-nas*
 'tomorrow, I will go to Ondarroa'

The future is also used to express probability in the present (as in Spanish):

- (204) *es takītt se ordu dan. Irūrak edo ixango-díra*
 'I don't know what time it is. It must be around 3 o'clock'
- (205) *ogeい urtē edo eukiko-díttxus*
 's/he must be about twenty'

3.2.3.6. Future of the past

The future of the past is formed with the future participle and the past indicative of the auxiliary. The future of the past is used when a future is embedded under a past tense in the main clause:

- (206) *esan eustan mariitzenerāko žakíngo ebala*
 's/he told me that s/he would know it by Tuesday'
- (207) *Pérak esan eustan domēkan žúngo sala*
 'Peru told me that he would go on Sunday'

This form may also indicate probability in the past:

- (208) *Górkak ogei urtē edo eukiko-ebásan Ameriketára žun sanian*
 'Gorka must have been about twenty when he went to America'
- (209) *ordu bīżak ixango-sirian etxera allaga sirinian*
 'it must have been around two o'clock when they got home'

This construction is also used in both parts of a conditional expression:

- (210) *erantzúna žakíngo banéban, esān go neutzun*
 'if I knew the answer, I would tell you' /
- (211) *dirua eukiko banéban, erosíko neban*
 'if I had money, I would buy it'

3.2.3.7. Present conditional

The present conditional is formed with the future participle and the conditional form of the auxiliary. The same expression may be used in the protasis and apodosis of a conditional construction:

- (212) *loteriža tokáko bažáten, etxe barri bât erosiko-néuko*
 'if I won the lotto, I would buy a new house'⁴⁹

The present conditional can always be replaced by the future of the past; that is, instead of the conditional form of the auxiliary, the past indicative can be used:

- (213) *erantzúna žakíngo banéban/banéuko, esângo neutzun*
 'if I knew the answer, I would tell you'

3.2.3.8. Past (failed) or hypothetical conditional

The past conditional is formed with the perfective participle and either the conditional or the past indicative of the auxiliary. This form is used exclusively in the protasis of the conditional construction. In the apodosis no distinction is made between failed and pending condition:

- (214) *erantzúna žakin-banéban/banéuko, esângo neutzun*
 'if I had known the answer, I would have told you (= I would tell you)'

3.2.3.9 Present potential

The present potential consists of the perfective participle and the present potential form of the auxiliary:

- | | |
|--|--|
| (215) <i>lagunâk ekarri léike</i>
'the friend can bring it' | (217) <i>esîñ néiket eraiñ ori atia</i>
'I cannot open that door' |
| (216) <i>nai badósu, gêwas etorri leikíxu/siñíkes</i>
'if you want, you may come with us' | |

These forms may express an epistemic meaning (i.e. 'may', 'might') or a root meaning (i.e. 'be able to', 'be allowed to'). A construction with *al* 'to be able to', 'to be allowed to' (or its negative *esiñ*) represents an alternative to convey the root meaning (cf. 3.2.5).

3.2.3.10. Past potential

The past potential is formed with the perfective participle and the past potential form of the auxiliary:

- (218) *maixúak etxián ein-leikigúla esa-eban*
 'the teacher told us that we could do it at home'
- (219) *aittak esa(n) eustan žún neikiéla*
 'father said that I could go'

(49) Cf. Sp. 'si me tocara la lotería'.

This construction may have an epistemic or a root meaning. To express the root meaning 'to be able' there is an alternative construction with *al/esiñ* and the past indicative, as in (220b), instead of the past potential form of the auxiliary (cf. section 3.2.5):

- (220) a. *esîñ neikén eraiñ bentanía* b. *esîñ ixan neban eraiñ bentanía*
 'I couldn't open the window / 'I couldn't open the window'
 I wasn't allowed to open the window'

3.2.3.11. Subjunctive and alternative expressions

There is a present subjunctive formed with the perfective participle and the present subjunctive paradigm of the auxiliary, as in (221). The subjunctive is used in noun clauses expressing an indirect command or a desire, in relative clauses with nonspecific referent and in adverbial clauses of purpose. In all contexts where the subjunctive can be used it is often replaced by nonfinite expressions.

A first use of the subjunctive is in indirect commands:

In this context an alternative construction to the subjunctive is provided by infinitival forms in /-te*-ko/. The examples in (224-226) have the same meaning as (221-223) above:

- | | |
|---|--|
| (224) <i>sapatak erósteko esan-dotzat</i>
'I told him to buy shoes' | (226) <i>atia erâitteko eskatu-neutzan</i>
'I asked him to open the door' |
| (225) <i>žûteko alamierdára esan-dotzat</i>
'I told him to go to hell' | |

Another alternative construction in clauses expressing an indirect command is a periphrastic construction employing the absolute singular of the verbal noun and the present of *euki* 'to have', as in (227) and (228):

- (227) *sapatak erostia daukosela/daukola esan-dotzat*⁵⁰
 'I told him (that he had) to buy shoes'

(228) *žutia daukola alamierdára esan-dotzat*
 'I told him to go to hell'

(50) In this example there is a choice in the conjugated form between marking agreement with a third person singular or a third person plural absolute argument (direct object). This choice is due to the fact that either the plural noun *sapátak* 'shoes' or the infinitival clause *sapátak erostia* 'to buy shoes' can be taken as the direct object:

Related to indirect commands are optative expressions. Both subjunctive clauses and the construction with *euki* and the verbal noun are used in optative expressions with third person subjects without subordination to another verb:

- | | |
|---|--|
| (229) <i>ein deižela</i>
'let him/her do it' | (231) <i>sapâatak eroštía daukosela</i>
'let him/heř buy the shoes' |
| (230) <i>žutia daukola améndik</i>
'let him/her go away from here' | (232) <i>emotia daukotzola</i>
'let him/her give it to him/her' |

In expressions of desire, either the subjunctive or nonfinite clauses with the absolute singular of the verbal noun are employed:

- (233) a. *su elixara žun sarien nai-dot*
'I want you to go to church'

- b. *su elixara žutia nai dot*

This is except that, if the subject of both clauses is the same, neither a subjunctive clause nor a verbal noun is used. Instead there is a single clause, with *nai* 'to want' as a semiauxiliary (cf. section 3.2.5). This is reminiscent of the situation in Spanish, although the particular constructions are rather different:

- (234) *elixarâ nai-dot žun*
'I want to go to church'

Another use of the subjunctive is in relative clauses. The use of the subjunctive in a relative clause indicates that the head noun does not have a specific referent (again, as in Spanish):

- (235) *nire biarrâgas lagundu neižen morro bat biar-dot*
'I need a guy to help me with my work'

On the other hand, if the present indicative is used, the referent is specific:

- (236) *nire biarrâgas lagúntzen naben morro bat daukat*
'I have a guy who helps with my work'

The subjunctive is also used in adverbial clauses of purpose. In this context, nonfinite forms in */-te*-ko* can be used instead (as in indirect commands, but with a different accentual pattern, cf. section 4.5.4.3):

- (237) a. *aittak ori esan-dau gu ixilik egôñ garien*
b. *aittak ori esan-dau gu ixilik egotêko*
'father said that so that we would be quiet'

- (238) *lagunak ori esa-eban seuk erosî deixun/erostêko*
'the friend said that so that you would buy it'

- (239) *ori ei-eban neu geldittû neižen/gelditzêko*
's/he did that so that I would stay'

The subjunctive mood has only a present tense. If the verb of the matrix clause is in a past tense (other than the present perfect/recent past), the subjunctive simply cannot be used. The present subjunctive cannot be used if past tense is required. The past indicative is also excluded. The alternative expressions with the verbal noun that have been presented above must be used instead:

- (240) a. *esan neutzan sapâatak erostia euka(sa)la*
b. *esan neutzan sapâatak erôsteko*
c. **esan neutzan sapâatak erosi deižen*
'I told him/her to buy shoes' (nonrecent past)

- (241) a. *aittak atzo ori esa-eban gu ixilik egotêko*
b. **?aittak atzo orî esan-eban gu ixilik egon giñian/garien*
'father said that yesterday so that we would be quiet'

The use of the subjunctive is thus much more restricted than in a language such as Spanish. We may note here that in a number of contexts where the subjunctive is used in Spanish, indicative or nonfinite expressions are employed instead in Lekeitio Basque. The indicative is used in the complement of verbs of doubt, disbelief, etc.:

- (242) *estôt pentzâten sasos allagáko danik*
'I do not think he will arrive on time'

In the complement of verbs of emotion, where the subjunctive is also required in Spanish, either an indicative or a nonfinite form is used in Lekeitio Basque:

- (243) a. *ikaria daukât Pérük txarto éingo daben*
b. *Pérük txarto eittéko ikaria daukat*
'I am afraid that Peru may do it badly'

- (244) *pôsten naix suk ainbête žatiágas*
'I am happy that you eat so much' (lit. 'with you eating so much')

In time clauses with future reference, which require the subjunctive in Spanish, the indicative is used in Lekeitio Basque:

- (245) *Ondarrúra žúten danian sure tîo ikusikó-dau*
'when s/he goes to Ondarroa s/he will see your uncle'

Finally, another context where the subjunctive is used in Spanish but not in Lekeitio Basque is in concessive clauses. With a concessive meaning, a nonfinite expression with /arren*/ postposed to the perfective participle is used:

- (246) *Pérük logura asko euki árren, estâ žúngo lotara*
'even though Peru may be very sleepy, he will not go to bed'

3.2.3.12. Imperative

The imperative is formed with the perfective participle and one of the imperative forms of the auxiliary:

- | | |
|---|---|
| (247) <i>etorrî saix!</i> / <i>etorrî yari!</i>
‘come (you-sg)!’ | (249) <i>êraik!</i> / <i>eraîxu!</i>
‘drink it!’ |
| (248) <i>es êixu ekarri!</i>
‘don’t bring it (you-sg)!’ | (250) <i>erosî žona!</i>
‘buy it’ |

The perfective participle by itself can also be used with imperative force:

- (251) *etôrri etxera!*
‘come home!’

(252) *leîdu liburúa!*
‘read the book!’

3.2.4. Periphrastic constructions

3.2.4.1. Progressive construction with ego

A progressive construction is formed with *egon* 'to be, stay' and the imperfective participle of the verb (cf. Spanish *estoy comprando*). The progressive with *egon* is characteristic of Biscayan varieties. Other dialects possess instead a construction with the semiauxiliary *ari* and the intransitive auxiliary (e.g. *erosten ari naiz* 'I am buying').

- (253) *liburúak sáltzen dagos*
'they are selling books'

(254) *Erroma ikûsten newan gerria asi sanian*
'I was seeing Rome when the war started'

(255) *pasa dan urtian ingelesa ikâsten newan*
'last year I was studying English'

(256) *gaur goixian telibisiñoya ikûsten egon-nas Péru allaga danian*
'this morning I was watching television when Peru arrived'

(257) *atzo telebisiñoya ikûsten newan Péru allaga sanian*
'yesterday I was waching television when Péru arrived'

3.2.4.2. Repetitive construction with *ibilli*

A type of repetitive construction is formed with *ibilli* 'to walk' and the imperfective participle of the main verb which has the meaning 'to go around V-ing', 'to be engaged in V-ing' (cf. Spanish *anda comprando libros*):

- (258) *ingelesa ikâsten ibilli-nas lau urtian*
 'I have been studying English for four years'

- (259) *Erroma ikûsten ibilli-nas askaneko lau egunétan*
 'I have been seeing Rome for the last four days'
- (260) *atzo sure laguna karakôlak topáten ibilli san*
 'yesterday, your friend was looking for snails'
- (261) *pasan illian subi barri bat êitten ibilli-sirian*
 'last month they were building a new bridge'
- (262) *pasan urtian goixeko seirêtan altzáten ibilli-nitzan*
 'last year, I would get up at six o'clock in the morning'
- (263) *liburûak sáltzen dabill*
 's/he is going around selling books'
- (264) *datorren urtian ingelesa ikâsten ibillikó-nas*
 'next year I will be learning English'

3.2.4.3. Habitual with *žakiñ*

There is a habitual construction with a conjugated form of *žakiñ* 'to know' and the imperfective participle:

- (265) *Sanantoliñétan, nire lagúnak bâdakîže etórten Lekittora*
 'by Saint Antolin's Day, my friends usually come to Lekeitio'

3.2.4.4. Resultative/experiential with *euki*

There is a construction formed with the adjectival participle of the main verb and a form of *euki* 'to have', which is used to indicate a result or experience. The following examples are in the present tense:

- | | |
|--|--|
| <p>(266) a. <i>Erroma ikusî dosu iñvoix?</i>
 'have you ever seen Rome?'</p> <p>(267) <i>aurten arraiñ asko atrapâta daukogu</i>
 'this year we have caught a lot of fish'</p> | <p>b. <i>Bai, Erroma ikusîta daukat</i>
 (or <i>Bai, Erroma ikusî dot)</i>
 'yes, I have seen Rome'</p> <p>(268) <i>etxia saldûta dauko</i>
 'he got his house sold'</p> |
|--|--|

The correct analysis of this construction appears to be as a structure with double predication, where *euki* constitutes the main predicate and the participial in /-ta/ introduces a secondary predication on the object of *euki*. This can be seen in the following examples:

- | | |
|---|---|
| <p>(269) <i>semia etorrîta daukat</i>
 'my son has come'
 (lit. 'I have the son arrived')</p> | <p>(270) <i>umia papillia žanda daukot</i>
 'my child has eaten his baby food'
 (lit. 'I have the child food-eaten',
 i.e. 'having eaten the food')</p> |
|---|---|

The structure of these sentences would thus be as follows:

- (271) a. (*nik*) *semia; [PRO_i etorritta] daukat*
 I.erg son come I-have
 b. (*nik*) *umia; [PRO_i papillia žanda] daukat*
 I.erg child food eaten I-have

The present resultative/experiential partially overlaps in meaning with the present perfect/recent past. The past resultative/experiential has the meaning of a pluperfect (that is, a past event completed before some other past event):

- (272) *allaga nitzanian, saldūta eukan liburúa*
 'when I arrived, he had already sold the book'

3.2.4.5. Resultative/experiential with *egon*

Another experiential construction is formed with the adjectival participle and a form of *egon* 'to be, stay':

- | | |
|---|---|
| (273) <i>Terranobára artian žúnda nago</i>
'I have been up to Newfoundland'
(lit. 'I am (having) gone to N.') | (274) <i>ōrtik ibillitta nago</i>
'I have been there'
(lit. 'I am (having) walked there') |
| (275) <i>bentâna batétik žausítta nago</i>
'I have fallen from a window' (experiential) | |

As we mentioned for the construction with *euki*, the past tense can be used as a pluperfect:

- (276) *allaga nitzanian nire lagúnak žânda ewasan*
 'when I arrived my friends had already eaten'

3.2.4.6. Future with *žuan*

A future action can be expressed with the imperfect participle of the main verb and a form of *žuan* 'go':

- (277) *kânta bat kantáten nóya*
 'I am going to sing a song'
- (278) *datorren urtian kimikâa ikásten nóya amentxe berton*
 'next year I am going to study chemistry right here'
- (279) *kantáten žuan nitzan, baiña askanian lotzatû eiñ-nitzan*
 'I was going to sing, but at the end I was shy'

3.2.4.7. Immediate future with *egon*

An immediate future with the meaning ‘to be about to’ is formed with the /-ko/ form of the verbal noun and a conjugated form of *egon*:

- (280) *nire aitta auntxe allagatéko dago*
‘my father is about to arrive now’
- (281) *batzârra iža amaitzéko ewala sartu-sirian sure lagúnak*
‘your friends came in when the meeting was about to end’
- (282) *neu kantatéko newala, Sinâtra allaga san*
‘when I was about to sing, Sinatra arrived’

3.2.4.8. Optative construction with *euki*

As mentioned in section 3.2.3.11, optative expressions are formed with the verbal noun and a conjugated form of *euki* ‘to have’ bearing the subordinating suffix /-la/:

- | | |
|---|---|
| (283) <i>etxera žutîa daukola</i>
‘let him/her go home!’ | (284) <i>kartzélan sartzía daukela</i>
‘may they put him/her in jail!’ |
|---|---|

3.2.5. Semiauxiliaries

Semiauxiliaries are verbs that appear in a nonfinite form together with main verb and auxiliary and generally placed between the two. The class of semiauxiliaries includes *eiñ* ‘to do’, *ixan* ‘to be’, *nai* ‘to want’, *biar* ‘must, need’, *al* ‘to be able’ and *esiñ* ‘not to be able’. These verbs do not form a homogeneous group from the point of view of their syntactic properties and will be presented separately.

The verb *eiñ* ‘to do’, in its semiauxiliary function, occurs after the main verb when this is focalized, as in (285–287b):

- | | |
|--|--|
| (285) a. <i>lagunâ etorri da</i>
‘the friend has come’ | b. <i>laguna etorrî eiñ dda</i>
‘the friend has COME’
(e.g. as opposed to going) |
| (286) a. <i>aittak ekarrikó-dau</i>
‘father will bring it’ | b. <i>aittak ekarrî eingó-dau</i>
‘father will BRING it’ |
| (287) a. <i>Górkak arraiñâ saltzén-dau</i>
‘Gorka sells fish’ | b. <i>Górkak saldû eittén-dau arraiña</i>
‘Gorka SELLS fish’ |

As can be observed from the examples, when the verb is focalized it always appears in its perfective form and the semiauxiliary *eiñ* appears in the participial form appropriate for the specific tense/aspect of the sentence. Auxiliary selection (transitive or intransitive) depends on the selectional properties of the main verb. For more details on focalization, cf. section 4.1.

The semiauxiliaries *nai* 'to want' and *biar* 'to need, must' present important similarities in their behavior, but also certain differences. In constructions with *nai*, the main verb is preposed to the auxiliary only when it is focalized; otherwise it is postposed:

- (288) a. *erosi nai-dot erložua*
'I want to BUY the watch'
- b. *erložuā nai-dot-erosi*
'I want to buy THE WATCH'

On the other hand, *biar* always occur between main verb and auxiliary in affirmative clauses. To focalize the verb, *eiñ* must be inserted in this case:

- (289) a. *erosi eiñ biar-dot erložua*
'I need to BUY the watch'
- b. *erložuā erosi-biar-dot*
'I need to buy THE WATCH'

Another important difference between *nai* and *biar* has to do with auxiliary selection. *Nai* always takes a transitive auxiliary, regardless of the type to which the main verb belongs. In constructions with *biar*, on the other hand, the transitive auxiliary is used when the main verb is transitive; but when the main verb is intransitive either auxiliary is possible:

- (290) *žūn nai-dau*
's/he wants to go'
- (292) *Péruk bižár nai-dau etorri*
'Peru wants to come tomorrow'
- (291) *žūn ein-biar-dau /da*
's/he must go'
- (293) a. *Péruk bižár etorri-biar-dau*
b. *Pérú bižár etorri-biar-da*
'Peru must come tomorrow'

In forms other than the present, a participial form of *ixan* is employed between the semiauxiliary and the inflected auxiliary. As with *eiñ*, the main verb appears always in the perfective participle. The presence of *ixan* is obligatory in the present perfect (to distinguish it from the present), and in the imperfect, because *nai* and *biar* do not have imperfective forms (they cannot take the imperfective suffix /-t(z)en*/). In other tenses, the use of *ixan* is optional:⁵¹

- (294) Present perfect / recent past:
žūn nai-ixan-dau 's/he has wanted to go'
žūn ein biar ikan-dau /da 's/he has had to go'
 Aorist
žūn nai-(ixan)-eban 's/he wanted to go'
žūn ein biar (ikan) eban /san 's/he had to go'
 Imperfect:
žūn nai-ixate-éban 's/he used to want to go'
žūn biar-ixate-éban /san 's/he used to have to go'
 Future:
žūn nai-ixangó-dau / žūn naikó-dau 's/he will want to go'

(51) Constructions with these semiauxiliaries do not occur in the potential. Instead impersonal expressions such as the following are normally used: *ixán lëke žun-nai-ixatía* 'it can be that one may want to go' (lit. 'it may be [for s.o.] to want to go'), *ixán leikten erosi-biar-ixatía* 'It might be that one might have to buy it'.

žün biar-ixangó-dau/da / žün ein-biarkó-dau/da 's/he will have to go'

Future of the past:

žün nai-ixango-éban / žün naiko-éban 's/he would want to go'

žün ein-biar-ixango-éban/san / žün ein-biarko-éban/san 's/he would have to go'

Present condition-Protasis:

*žün nai-ixángó baléuko / žün náiko baléuko*⁵² 'if s/he wanted to go'

*žün biar-ixángó baléuko/balitzatéke / žün biar baléuko/balitzatéke*⁵³ 'if s/he had to go'

Condition-Apodosis:

žün nai-ixango-léuko / žün naiko-léuko 's/he would want to go'

žün ein-biar-ixango-léuko/litzatéke / žün ein-biarko-léuko/litzatéke 's/he would have to go'

As mentioned above, the main verb may appear preceding the semiauxiliary *nai* only when it is focalized (as in the examples just given); otherwise the focalized phrase appears immediately before the semiauxiliary *nai* and the main verb follows the inflected auxiliary:

- (295) *žün nai dau etxera*
's/he wants TO GO home'

- (297) *Bilbôra nai-ixango-néuko žun*
'I would like to go TO BILBAO'

- (296) *etixerâ nai dau žun*
's/he wants to go HOME'

A form derived from *nai*, and with the same properties, is *naižago* 'to prefer, to have better', morphologically a comparative of *nai*:

- (298) *naižago ixan-dot etxian geldittu*
'I have preferred to stay at home'

Another semiauxiliary verb is *al* 'to be able'. This verb presents some special characteristics. In the unmarked case, *al* is the focalized element in the sentence. As with *nai*, the main verb is preposed to the semiauxiliary only when it is focalized:

- (299) a. *guk al dogu žun*
'we CAN go'
b. *guk žün al-dogu*
'we can GO'

- (300) a. *guk al dogu pelótan žokatu*
'we CAN play ball'
b. *guk žokatû al-dogu pelótan*
'we can PLAY ball'

The semiauxiliary *al* takes the transitive auxiliary. However, optionally but less preferably, when the main verb is intransitive, the intransitive auxiliary can be used. In this respect *al* falls between *nai* which does not coocur with the intransitive auxiliary and *biar*, which allows both auxiliaries with equal ease when the main verb is intransitive:

(52) In these examples no element is marked as focus because the focus appears in the apodosis.

(53) As shown in the example, *biar* (unlike *nai*) appears without the future marker in this tense when *ixan* is not used.

For the expression of different tenses/aspects the same structures are used as with *nai*:⁵⁴

- (304) Present perfect:
 $\check{z}\bar{u}n$ al-ixan-dau
's/he has been able to go'

Aorist:
 $\check{z}\bar{u}n$ al-ixan-eban
's/he was able to go'

Future of the past:
 $\check{z}\bar{u}n$ al-ixango-éban
's/he would be able to go'

Condition, apodosis:
 $\check{z}\bar{u}n$ al-ixango-léuko
's/he would be able to go'

Imperfect:
 $\check{z}\bar{u}n$ al-ixate-éban
's/he used to be able to go'

Future:
 $\check{z}\bar{u}n$ al-ixangó-dau
's/he will be able to go'

Condition, protasis:
 $\check{z}\bar{u}n$ al-ixángo ba-léuko
'if s/he could go'

Al can be used with potential forms of the auxiliary. There is no clear difference in meaning between the potential and the indicative in constructions with *al*. The two sentences in (305), formally in the present potential and the present indicative, respectively, appear to have the same meaning:

- (305) a. *suk âl lekixu amarrétan etorri?* b. *suk âl dosu amarrétan etorri?*
 'can you come at ten?'

In negative clauses, *al* is replaced by *esīñ* 'not to be able', which has the same properties for auxiliary selection and position as *al*:

Finally, the verb *ixan* 'to be' is used as a semiauxiliary to indicate aspect in constructions with *nai*, *biar*, *al* and *esin̄*, as has been indicated, cf. (220b), and also with an irregular verb such as *bixi* 'to live' whose perfective participle is used in the present tense:

- (309) *bixi-naix* 'I live' (cf. *žauštén-naix* 'I fall')
 (310) *bixi-ixan-naix* 'I have lived' (cf. *žausi-naix* 'I have fallen')

(54) In all of the examples in (304) the intransitive auxiliary can be used instead, although less preferably.

(55) For the position of the focal accent in these sentences, cf. section 4.2.

3.2.6. Modal prefixes

There are a few modal particles which are prefixed to finite verb forms. These include the conditional /ba-*/ and the evidentials /ete-*/ 'perhaps' and /ei-*/ 'seemingly'. These elements induce penultimate accent on the auxiliary and thus show to be accented prefixes (cf. section 2.8.4):⁵⁶

- | | |
|--|--|
| (311) a. <i>sêuk ikusi-dosu</i>
‘you have seen it’ | b. <i>seuk ikusi ba-dósu</i>
‘if you have seen it’ |
| (312) a. <i>ni etorrîko nitzateke</i>
‘I WOULD come’ | b. <i>ni etorrîko ba-nitzatéke</i>
‘if I came’ |
| (313) a. <i>lagûnak etorri-diras</i>
‘the friends came’ | b. <i>lagûnak etorri-ei-díras</i>
‘the friends seem to have come’ |
| (314) a. <i>gâur etorri-diras?</i>
‘did they come TODAY?’ | b. <i>gâur etorri-ete-díras?</i>
‘did they perhaps arrive TODAY?’ |

The prefical nature of these modal particles is clear, since they are accented morphemes and their lexical accent appears on the penultimate of the verb to which they are attached. Characterization as prefixes is less straightforward in the case of the negative particle /es/ and affirmative /ba(i)/. As was shown in section 2.7.2, /es/ triggers a number of special phonological rules, which fact appears to indicate that it is a prefix. On the other hand, /es/ forms a single accentual word with a following finite verb only when the latter is unaccented and does not carry a complementizer. In (315), the negation is focalized and focal accent appears on the verb, showing that negative particle and verb constitute a single prosodic word. In (316), on the other hand, /es/ constitutes a separate accentual word and receives focal accent on itself, since the verb /doya*/ is accented (it loses its accent by an accent clash resolution rule, cf. section 2.8.10).⁵⁷ In (317), where the verb carries a complementizer, /es/ also receives the focal accent on itself, showing that for accentual purposes it is a separate word:

- | | |
|---|--|
| (315) <i>Pérû estatôr</i>
‘Peru is NOT coming’ | (317) <i>Pérû ès tatorrela dñot</i>
‘I say that Peru is NOT coming’ |
| (316) <i>Pérû ès toyâ</i>
‘Peru is NOT going’ | |

The same accentual facts obtain with the affirmative particle /ba(i)/:

- | | |
|--|--|
| (318) <i>gixona datôr</i>
‘THE MAN is coming’ | (319) <i>badatôr gixona</i>
‘the man IS coming’ |
|--|--|

(56) Azkue (1923: 43–44) already observed that these particles are prefixes.

(57) As discussed in section 2.8.7, unaccented synthetic verbs fuse in a single prosodic word with a preceding focalized unaccented phrase. Lexically accented verbs remain as separate prosodic words.

- (320) *gixona bâ datorrela dñot*
 'I say that the man IS coming'

It is, thus, not evident that /es/ and /ba(i)/ can be treated as prefixes. Rather, they seem to behave as cliticizing elements.

3.3. Derivation

3.3.1. Noun-forming suffixes

Among the derivational suffixes that can be used to create nouns from other nouns we find the following:

- (321) /-dun*/ 'having, possessor'

bixar	'beard'	bixárdun	'bearded'
ume	'child'	umérunt	'having children'
ardura	'worry'	ardurádun	'person in charge'
ikatz	'coal'	ikásdun	'coal seller'
esne	'milk'	esnérunt	'milkman'

A few nouns with this suffix are unaccented. In fact a lexical accent carried by the root is lost in a couple of examples with this suffix:

- (322) erdéra 'Spanish' erdalduñ 'Spanish speaker'
 euskéra 'Basque lg.' euskaldun 'Basque speaker'
 berba 'word' berbaldun 'talkative'

- (323) /-(l)ari / (deaccenting) 'one who has a relation with N as a profession or occupation'

pelóta	'ball'	pelotari	'ball player'
bértzo	'verse'	bertzolari	'verse-singer'
txistu	'flute'	txistulari	'flautist'
aixkóra	'ax'	aixkolari	'lumber jack'
áurre	'front'	aurrelari	'front player (in ball game)'
átze	'back'	atzelari	'back player (in ball game)'

- (324) /-tza*/ a. 'name of profession or position'

- b. 'place where N abounds'

a. alkate	'mayor'	alkatétsa	'mayorship'
soldau	'soldier'	soldáutza	'military service'
abade	'priest'	abadétsa	'priesthood'

b. arto	'corn'	artótza	'cornfield'
sasi	'bush (plant)'	sasítza	'bush (field)'
kaka	'excrement'	kakátsa	'heap of excrement'
posu	'puddle'	posútsa	'big puddle'

- (325) /-kada/ (deaccenting) 'blow with N', 'N-ful', or 'heap of N'⁵⁸

arri	'stone'	arrikada	'blow with a stone'
------	---------	----------	---------------------

<i>esku</i>	'hand'	<i>eskukada</i>	'blow with the hand; handful'
<i>ostiko</i>	'kick'	<i>ostikada</i>	'kick'
<i>au</i>	'mouth'	<i>aukada</i>	'mouthful'
<i>kárro</i>	'cart'	<i>karrokada</i>	'cart-'full ⁵⁹

(326) /-kaso*/ 'blow with N'

<i>buru</i>	'head'	<i>burukáso</i>	'blow with/on the head'
<i>pálo</i>	'stick'	<i>palokáso</i>	'blow with a stick'
<i>arri</i>	'stone'	<i>arrikáso</i>	'blow with a stone'
<i>ikuwill</i>	'fist'	<i>ikuwilkáso</i>	'punch'

(327) /-(t)ar*/ 'inhabitant, member of a group'

<i>Lekitto</i>	'Lekeitio'	<i>lekíttar</i>	'Lekeitian'
<i>Ondárru</i>	'Ondarroa'	<i>ondarrúttar</i>	'Ondarroan'
<i>kánpo</i>	'outside'	<i>kanpóttar</i>	'outsider'
<i>kale</i>	'street'	<i>kaléttar</i>	'town-dweller'
<i>Alsíbar</i>	'family name'	<i>alsibártar</i>	'one of the Alzibars'
<i>séwek</i>	'you (pl.)'	<i>sewétar</i>	'one of you (pl.)'
<i>basérri</i>	'farmhouse'	<i>baserrittar</i>	'farmer'
<i>gu</i>	'we'	<i>gútar</i>	'one of us'

(328) /-ki*/ 'piece'

<i>txarri</i>	'pig'	<i>txarríki</i>	'pork'
<i>saspi</i>	'seven'	<i>saspíki</i>	'premature baby, pernickety'

(329) /-si/ 'urge'

<i>txixa</i>	'urine'	<i>txixasi</i>	'urge to urinate'
<i>kaka</i>	'excrement'	<i>kakasi</i>	'urge to defecate'

(330) /-pe*/ 'under' (related to *be* 'under, below')⁶⁰

<i>elixá</i>	'church'	<i>elixápe</i>	'under the church'
<i>arbóla</i>	'tree'	<i>arbolápe</i>	'under the tree'
<i>kontzižo</i>	'Town Hall'	<i>kontzižópe</i>	'under the Town Hall'
<i>tinglau</i>	'platform'	<i>tingláupe</i>	'under the platform'
<i>aterri</i>	'shelter'	<i>atérpe</i>	'under the shelter'
<i>toldo</i>	'awning'	<i>toldópe</i>	'under the sunshade'

(331) /-sale*/ 'fond of'

<i>arraíñ</i>	'fish'	<i>arrainsále</i>	'fond of fish'
<i>ardau</i>	'wine'	<i>ardausále</i>	'fond of wine'

(58) There are some examples where the suffix *-ada* forms nouns that are derived from verbs such as *sakada* 'push' from *sakatu* 'to push'. On the other hand, in *saparrada* 'shower rain' there is no more basic word from which it could derive.

(59) E.g.: *karrokada bat arto* 'a cart-full of corn'.

(60) A reason to consider /pe*/ a derivational suffix and not a postposition is that the accent that it introduces is not enclitic, as shown by the fact that it moves to the right: *elixapían* 'under the church'.

There is a productive diminutive suffix */-txu*/*. Another diminutive suffix, which is not productive, is */-tilla*/*:

(332) Diminutives

/-txu/*

<i>katu</i>	'cat'	<i>katútxu</i>	'kitten'
<i>lora</i>	'flower'	<i>lorátxu</i>	'little flower'
<i>arpei</i>	'face'	<i>arpéitxu</i>	'little face'
<i>/-tilla*/</i>			
<i>neska</i>	'girl'	<i>neskatilla</i>	'little girl'

The suffix */-ko/*, which we have included among the inflectional suffixes as genitive locative, but which more generally has a linking function (de Rijk 1993), acquires a derivational character in some expressions with a lexicalized meaning:

(333) */-ko/ 'of'*

<i>arpe(g)i</i>	'face'	<i>arpeiko</i>	'slap'
<i>matarla</i>	'cheek'	<i>matarlako</i>	'blow on the cheek'
<i>esku</i>	'hand'	<i>eskuko</i>	'money in hand'
<i>beso</i>	'arm'	<i>besuetáko</i>	'god-child'
<i>milla</i>	'thousand'	<i>millako</i>	'one thousand pesetas note'
<i>bost</i>	'five'	<i>bosteko</i>	'five hundred/thousand pesetas coin/note'
<i>bat</i>	'one'	<i>bateko</i>	'ace (in card game)'
<i>bi</i>	'two'	<i>biko</i>	'two (in card game)'
<i>eske</i>	'asking'	<i>eskeko</i>	'beggar'

The two suffixes */-tasun/*, which names a quality, and */-keri/*, which indicates a negative quality, create nouns usually from adjectives, but, in some cases, from other nouns:

(334) */-(t)asun/ 'quality'*

<i>estu</i>	'narrow'	<i>estutasun</i>	'distress'
<i>lagun</i>	'friend'	<i>laguntasun</i>	'friendship, help'
<i>arro</i>	'proud'	<i>arroatasun</i>	'pride'
<i>garbi</i>	'clean'	<i>garbitasun</i>	'cleanness, cleaning'
<i>bero</i>	'hot'	<i>berotasun</i>	'heat'
<i>otz</i>	'cold'	<i>otzittasun</i>	'cold'
<i>ixill</i>	'quiet'	<i>ixiltasun</i>	'quietness'
<i>illun</i>	'dark'	<i>illuntasun</i>	'darkness'
<i>gixon</i>	'man'	<i>gixontasun</i>	'manhood'

(335) */-keri/ (deaccenting) 'negative quality or act'*

<i>soro</i>	'crazy'	<i>sorokeri</i>	'crazy act'
<i>abill</i>	'skilful'	<i>abilkeri</i>	'skilful act'
<i>tonto</i>	'silly'	<i>tontokeri</i>	'silly act'
<i>ume</i>	'child'	<i>umekeri</i>	'childish act'

<i>arro</i>	'proud'	<i>arrokeri</i>	'conceited act'
<i>santar</i>	'disgusting'	<i>santarkeri</i>	'disgusting act'
<i>gaixtxo</i>	'evil person'	<i>gaixtokeri</i>	'evil act'
<i>oker</i>	'twisted'	<i>okerkeri</i>	'twisted act'
<i>sorgiñ</i>	'witch'	<i>sorginkeri</i>	'witchcraft'
<i>txotxólo</i>	'stupid'	<i>txotxolokeri</i>	'stupid act'

The suffix /-kera*/ combines with perfective participles to form nouns:

(336) /-kera*/ 'manner, way of V-ing'

<i>asi</i>	'to begin'	<i>asikéra</i>	'beginning'
<i>amaittu</i>	'to finish'	<i>amaittukéra</i>	'end'
<i>esan</i>	'to say'	<i>esakéra</i>	'expression'
<i>etorri</i>	'to come'	<i>etorrikéra</i>	'witty remark'
<i>ibilli</i>	'to walk'	<i>ibillikéra</i> ~ <i>ibilkéra</i>	'way of walking'
<i>žantzi</i>	'to dress'	<i>žantzikéra</i> ~ <i>žaskéra</i>	'way of dressing'
<i>ixan</i>	'to be'	<i>ixakéra</i>	'way of being'

Two suffixes with a very restricted semantic field are /-ari*/ and /-ngo*/. The suffix /-ari*/ attaches to the root of verbs of eating and drinking to give nouns. The suffix /-ngo*/ attaches to color adjectives to give the names of the parts of an egg:

(337) /-ari*/ 'deverbal'

<i>edan</i>	'to drink'	<i>edári</i>	'drink'
<i>žan</i>	'to eat'	<i>žanári</i>	'food'
<i>afaldu</i>	'to eat'	<i>afari</i>	'supper' ⁶¹

(338) /-ngo*/ 'part of egg'

<i>gorri</i>	'red'	<i>gorrínigo</i>	'yolk'
<i>suri</i>	'white'	<i>suríingo</i>	'white of egg'

As for the derivation of nouns from verbs, the suffix /-te*/ ~ /-tze*/ creates nominal forms from verbs (cf. section 3.2.1.3). This suffix was included under inflection because it is intimately related to the imperfective participle and because it is completely productive. Every verb has a nominalized form with this suffix.

3.3.2. Adjective-forming suffixes

There are three suffixes which attach to any adjective (or participle) to form another adjective and, thus, are 'semi-inflectional'. These are the superlative /-en*/,⁶² the comparative /-ago*/ and the excessive /-egi*/:

(61) The word *afari* appears to be unaccented in most varieties with accentual systems of the Western type. Other words bearing this suffix are accented.

(62) As argued in section 2.6.3, the superlative suffix is related to the genitive plural.

(339) /-en*/ 'superlative, most'

<i>andi</i>	'big'	<i>andízen</i>	'biggest'
<i>txikiñ</i>	'small'	<i>txikíñen</i>	'smallest'
<i>aberatz</i>	'rich'	<i>aberátzen</i>	'richest'

(340) /-ago*/ 'comparative, more'

<i>andi</i>	'big'	<i>andižágo</i>	'bigger'
<i>txikiñ</i>	'small'	<i>txikiñágó</i>	'smaller'
<i>aberatz</i>	'rich'	<i>aberatzágó</i>	'richer'
<i>žakiñ</i>	'to know'	<i>žakiñágó</i>	'better known'

(341) /-egi*/ 'excessive, too'

<i>andi</i>	'big'	<i>andižégi</i>	'too big'
<i>txikiñ</i>	'small'	<i>txikiñégi</i>	'too small'
<i>aberatz</i>	'rich'	<i>aberatzégi</i>	'too rich'

In both the comparative and the excessive the intervocalic /g/ is often deleted. In addition, in the comparative the first vowel of the suffix often assimilates to the second; e.g.: *andižágo* - *andižoo* 'bigger', *guapuágó* - *guapuó* 'more handsome'.

When the superlative, comparative and excessive suffixes are added to perfect participles in *-a*, an intervening *-w-* surfaces. The diachronic reason for this apparent insertion appears to be that those participles used to end in *-au*:

(342) <i>gusta</i>	'to like'	<i>gustawágó, gustawóo</i>	'more liked'
<i>entrena</i>	'to train'	<i>entrenawágó, entrenawóo</i>	'more trained'
		<i>entrenawéna</i>	'the best trained one'
<i>atrapa</i>	'to catch'	<i>atrapawéna</i>	'the craziest one'
		<i>atrapawé(g)i</i>	'too crazy'

A number of suffixes derive adjectives from nouns:

(343) /-ti*/ 'characterized by N'

<i>txixa</i>	'urine'	<i>txixáti</i>	's.o. who urinates a lot'
<i>kaka</i>	'excrement'	<i>kakáti</i>	'pooper'
<i>móko</i>	'snot'	<i>mokóti</i>	'snotty'
<i>negar</i>	'tear'	<i>negárti</i>	'cry-baby'
<i>adur</i>	'saliva'	<i>adúrti</i>	'drooling'
<i>ikara</i>	'fear'	<i>ikaráti</i>	'fearful'
<i>esker</i>	'left'	<i>eskérti</i>	'left-handed'
<i>gusur</i>	'lie'	<i>gusúrti</i>	'liar'
<i>lotza</i>	'shame'	<i>lotzáti</i>	'shy' ⁶³
<i>didar</i>	'shout'	<i>didárti</i>	's.o. who shouts a lot'

(344) /-sto*/ 'characterized by N, derogatory'

<i>sorri</i>	'louse'	<i>sorrísto</i>	'lousy'
<i>koipe</i>	'grease'	<i>koipésto</i>	'greasy'

(63) Not as frequent as *lótzor* 'shy'.

(345) /-tzu/ 'having, abundant in N'

<i>ule</i>	'hair'	<i>uletzu</i>	'hairy'
<i>inddar</i>	'strength'	<i>inddartzu</i>	'strong'
<i>laño</i>	'fog'	<i>lañotzu</i>	'foggy'
<i>pixo</i>	'weight'	<i>pixotzu</i>	'heavy'
<i>koipe</i>	'grease'	<i>koipetzu</i>	'greasy'
<i>mamiñ</i>	'meat'	<i>mamintzu</i>	'meaty'
<i>ixerdi</i>	'sweat'	<i>ixerditzu</i>	'sweaty'
<i>miñ</i>	'pain'	<i>mintzu</i>	'painful'

The suffix /-garri/ 'worth of' can attach to nouns or to verbs:

(346) /-garri/ 'worth of, causing'

<i>lotza</i>	'shame'	<i>lotzagarri</i>	'shameful'
<i>pena</i>	'pity'	<i>penagarri</i>	'pitiful'
<i>ikusi</i>	'to see'	<i>ikusgarri</i>	'worth seeing'

Ordinal numerals are obtained by attaching /-garren*/ to cardinal numerals:

(347) /-garren*/ 'ordinal'

<i>bi</i>	'two'	<i>bigárren</i>	'second'
<i>saspi</i>	'seven'	<i>saspigárren</i>	'seventh'
<i>bederátzzi</i>	'nine'	<i>bederatzigárren</i>	'ninth'

3.3.3. Verb-forming suffixes

The suffix /-tu/ (deaccenting) (-du after nasal or lateral), attaches to nouns and adjectives to form perfective participles:

(348) /-tu/

<i>žawe</i>	'owner'	<i>žawetu</i>	'to become the owner'
<i>epel</i>	'mild'	<i>epeldu</i>	'to become mild'
<i>aberatz</i>	'rich'	<i>aberastu</i>	'to become rich'
<i>afari</i>	'supper'	<i>afaldu</i>	'to have supper'
<i>andi</i>	'big'	<i>andittu</i>	'to become/make big'
<i>apur</i>	'bit'	<i>apurtu</i>	'to break into pieces'
<i>argal</i>	'thin'	<i>argaldu</i>	'to become thin'
<i>argi</i>	'light'	<i>argittu</i>	'to become/make lighter, clearer'
<i>asarre</i>	'anger'	<i>asarratu</i>	'to become/make angry'
<i>bake</i>	'peace'	<i>baketu</i>	'to pacify'
<i>baltz</i>	'black'	<i>baltzittu</i>	'to become/make black'
<i>bardin</i>	'same'	<i>bardinddu</i>	'to become/make the same'
<i>bare</i>	'calm'	<i>baretu</i>	'to become calm (sea)'
<i>baster</i>	'corner'	<i>bastertu</i>	'to leave in a corner'
<i>bat</i>	'one'	<i>batu(n)</i>	'to bring together'
<i>berde</i>	'green'	<i>berdetu</i>	'to become/make green'
<i>bero</i>	'hot'	<i>berotu</i>	'to heat'
<i>biar</i>	'obligation'	<i>biartu</i>	'to oblige'
<i>bigun</i>	'soft'	<i>bigundu</i>	'to soften'

<i>billós-ik</i>	'naked'	<i>billostu</i>	'to undress'
<i>biskor</i>	'strong'	<i>biskortu</i>	'to strengthen'
<i>bustarri</i>	'yoke'	<i>bustartu</i>	'to yoke'
<i>damu</i>	'repentance'	<i>damutu</i>	'to repent'
<i>epel</i>	'lukewarm'	<i>epeldu</i>	'to warm up'
<i>erres</i>	'easy'	<i>errestu</i>	'to make easy'
<i>formal</i>	'formal'	<i>formaldu</i>	'to make formal'
<i>fresco</i>	'chilly'	<i>freskotu</i>	'to become chilly'
<i>gaixo</i>	'sick'	<i>gaixotu</i>	'to become sick'
<i>gaixtxo</i>	'bad'	<i>gaixtotu</i>	'to become bad'
<i>garbi</i>	'clean'	<i>garbittu</i>	'to clean'
<i>gixon</i>	'man'	<i>gixondu</i>	'to become a man'
<i>gitxi</i>	'little'	<i>gitxittu</i>	'to decrease'
<i>gogor</i>	'hard'	<i>gogortu</i>	'to harden'
<i>gorri</i>	'red'	<i>gorrittu</i>	'to become red'
<i>gor</i>	'deaf'	<i>gortu</i>	'to become deaf'
<i>gose</i>	'hunger'	<i>gosetu</i>	'to become hungry'
<i>gurma</i>	'sea fog'	<i>gurmatu</i>	'to become foggy'
<i>ikara</i>	'fear'	<i>ikaratu</i>	'to frighten'
<i>illun</i>	'dark'	<i>illundu</i>	'to become/make dark'
<i>inddar</i>	'strength'	<i>inddartu</i>	'to become/make strong'
<i>ixerdi</i>	'sweat'	<i>ixerdittu</i>	'to sweat'
<i>ixill</i>	'quiet'	<i>ixilddu</i>	'to become/make quiet'
<i>isotz</i>	'ice'	<i>isostu</i>	'to freeze'
<i>itzu</i>	'blind'	<i>itzutu</i>	'to become blind'
<i>kargu</i>	'charge'	<i>kargutu</i>	'to be in charge'
<i>kaka</i>	'excrement'	<i>kakastu</i>	'to spoil'
<i>kokólo</i>	'dumb'	<i>kokolotu</i>	'to become dumb'
<i>lagun</i>	'friend'	<i>lagundu</i>	'to help'
<i>laño</i>	'inland fog'	<i>lañotu</i>	'to become foggy'
<i>labur</i>	'short'	<i>laburtu</i>	'to shorten'
<i>larri</i>	'dizzy'	<i>larrittu</i>	'to become dizzy'
<i>lasai</i>	'calm'	<i>lasaittu</i>	'to calm down'
<i>lodi</i>	'fat'	<i>lodittu</i>	'to fatten'
<i>lora</i>	'flower'	<i>loratu</i>	'to bloom'
<i>lotza</i>	'shame'	<i>lotzatu</i>	'to ashame'
<i>luse</i>	'long'	<i>lusetu</i>	'to lengthen'
<i>makal</i>	'weak'	<i>makaldu</i>	'to weaken'
<i>moreno</i>	'tanned'	<i>morenotu</i>	'to become tanned'
<i>moskor</i>	'drunken'	<i>moskortu</i>	'to get drunk'
<i>me</i>	'thin'	<i>metu</i>	'to (become) thin'
<i>neurri</i>	'measure'	<i>neurtu</i>	'to measure'
<i>obe</i>	'better'	<i>obetu</i>	'to better'
<i>oker</i>	'twisted'	<i>okertu</i>	'to twist'
<i>ori</i>	'yellow'	<i>orittu</i>	'to become yellow'
<i>otz</i>	'cold'	<i>otzittu</i>	'to become/make cold'

<i>pos</i>	'happiness'	<i>postu</i>	'to become/make happy'
<i>sabal</i>	'wide'	<i>sabald<u>u</u></i>	'to widen'
<i>sati</i>	'piece'	<i>satitt<u>u</u></i>	'to reduce to pieces'
<i>sakon</i>	'deep'	<i>sakond<u>u</u></i>	'to make deep'
<i>sar</i>	'old'	<i>scrtw</i>	'to bgcomg old'
<i>sorrotz</i>	'sharp'	<i>sorrost<u>u</u></i>	'to sharpen'
<i>suri</i>	'white'	<i>suritt<u>u</u></i>	'to become white'
<i>sutún-ik</i>	'standing'	<i>sutund<u>u</u></i>	'to stand up'
<i>tónto</i>	'stupid'	<i>tontot<u>u</u></i>	'to become stupid'
<i>tximur</i>	'wrinkle'	<i>tximurt<u>u</u></i>	'to wrinkle'
<i>ume</i>	'child'	<i>umetu</i>	'to become (like) a child'
<i>ur</i>	'water'	<i>urt<u>u</u></i>	'to thaw, to melt'
<i>usain</i>	'smell'	<i>usaindu</i>	'to become smelly'
<i>ustel</i>	'rotten'	<i>usteld<u>u</u></i>	'to rot'

The suffix /-tu/ may also be added to the allative form of a noun, to form verbs conveying the notion of movement to the place denoted by the noun:⁶⁴

(349) /-ra-tu/

<i>áuze</i>	'back'	<i>atzeratu</i>	'to delay, move to the back'
<i>áurre</i>	'front'	<i>aurreratu</i>	'to advance'
<i>etxe</i>	'house'	<i>etxeratu</i>	'to go home'
<i>itxaso</i>	'sea'	<i>itxasoratu</i>	'to go to the sea'
<i>kale</i>	'street'	<i>kaleratu</i>	'to go out'
<i>kóntu</i>	'attention'	<i>konturatu</i>	'to notice, realize'
<i>lepo</i>	'back'	<i>leporatu</i>	'to inculpate'
<i>urre</i>	'near'	<i>urreratu</i>	'to bring near'
<i>oe</i>	'bed'	<i>oeratu</i>	'to go to bed'

3.3.4. Adverb-forming suffixes

The suffix /-to/ (-do after a nasal) attaches to adjectives to create adverbs:

(350) /-to/

<i>santar</i>	'bad'	<i>santarto</i>	'badly'	<i>obe</i>	'better'	<i>obeto</i>	'better'
<i>on</i>	'good'	<i>ondo</i>	'well'	<i>txar</i>	'bad'	<i>txarto</i>	'badly'
<i>politt</i>	'pretty'	<i>politto</i>	'prettily'	<i>eder</i>	'beautiful'	<i>ederto</i>	'beautifully'

This is not a productive suffix. It is not possible, for example, to create adverbs such as **loit* 'dirtily' from *loit* 'dirty' or **laburto* 'shortly', from *labur* 'short'.⁶⁵ The suffix /-ka*/ (-ga after a nasal) permits the creation of adverbs from nouns or verbs:

(64) Notice that when the root is accented it loses its accent. All perfective participles are unaccented in Lekeitio.

(65) This is also true of other Biscayan varieties (cf. Hualde & Bilbao 1992: 76-77) There is, thus, no counterpart in Biscayan Basque to the suffix /-ki/ '-ly' which appears to be used in a completely productive manner in some eastern dialects.

(351) /-ka*/

sálto	'jump'	saltóka	'jumping'
barre	'laughter'	barréska	'laughing'
a(g)iñ	'tooth'	áinka	'biting'
buélta	'turn'	bueltáka	'turning'
txiližo	'scream'	txiližóka	'screaming'
sarata	'noise'	saratáka	'making noise'
txíste	'joke'	txistéka	'telling jokes'
dardara	'shake'	dardaráka	'shaking'
ardau	'wine'	ardáuka	'drinking wine'
ariñ	'quick'	ariñ-arínga	'quickly'
geldi	'slow'	geldi-geldíka	'slowly'
mosu	'kiss'	mosíka	'kissing'
		auskáka	'fighting'

The suffix /-ro*/ attaches to names of time periods to produce a form with the meaning 'every time period'. In addition, it also appears in a few other adverbials:

(352) /-ro*/

aste	'week'	astéro	'every week'
urte	'year'	urtéro	'every year'
ille	'month'	illéro	'every month'
egun	'day'	egunéro	'every day'
barri	'new'	barriro	'again'
geldi	'slow'	geldíro	'slowly'

A number of nouns inflected in the inessive case are used as adverbials. Depending on the specific noun, the inessive singular, plural or indefinite is used in this function:

(353) /-(e)an/ inessive singular

júerga	'party'	júérgan	'partying'
usaiñ	'smell'	usaiñian	'smelling for'

(354) /-e*-ta-n/ inessive plural

karta	'card'	kartétan	'playing cards'
kañika	'marble'	kañikétan	'playing marbles'
berba	'word'	berbétan	'talking'
bróma	'joke'	brométan	'joking'

(355) /-ta-n/ inessive indefinite⁶⁶

lapur	'thief'	lapurretan	'stealing'
su	'fire'	sutan	'on fire'
andra	'woman'	andratan	'looking for women'
uso	'pigeon'	usotan	'hunting for pigeons'

(66) An epenthetic vowel /e/ is inserted after a vowel.

<i>arraiañ</i>	'fish'	<i>arrainañetan</i>	'fishing'
<i>karakol</i>	'snail'	<i>karakoletan</i>	'going for snails'
<i>ardau</i>	'wine'	<i>ardautan</i>	'going for wine'
<i>txiki</i>	'small'	<i>txikittan</i>	'as a child, in childhood'

In a few cases, the inessive affix appears to have been attached to a perfective participle; or, at least, no other form of the noun from where the participle may also derive is currently used:

(356) <i>olga</i>	'to play'	<i>olgétan</i>	'playing'
<i>pasia</i>	'to walk'	<i>pasiétan</i>	'going for a walk' ⁶⁷
<i>eskatu</i>	'to ask for'	<i>eskian</i>	'begging'
<i>iarri</i>	'to notice'	<i>iarrižan</i>	'being noticeable'

A few adverbials bear the partitive suffix /-(r)ik/:

(357) /-(r)ik/ partitive			
<i>ixill</i>	'quiet'	<i>ixilik</i>	'quietly'
<i>geldi</i>	'still'	<i>geldirik</i>	'still'
<i>bixi</i>	'life'	<i>bixirik</i>	'alive'
_____	_____	<i>sutúnik</i>	'standing'
_____	_____	<i>billósik</i>	'naked'

3.3.5. Prefixation

Outside of verbal inflection, prefixes are not common in Basque. There are remnants of an old pattern of construction of causative verbs by prefixation of /-ra-/. The following examples are found in Lekeitio:

(358) Old causatives

<i>eiñ</i>	'to do'	<i>eraíñ</i>	'to cause'
<i>ibilli</i>	'to walk'	<i>erabilli</i>	'to use'
<i>ikusi</i>	'to see'	<i>erakutzi</i>	'to show, teach' ⁶⁸
<i>žu(a)n</i>	'to go'	<i>erun</i>	'to take'

There are a couple of negative prefixes *des-* (borrowed from Spanish) and *es-* (identical to the negative particle), which appear only in a few words:

(359) Negative prefixes

<i>eiñ</i>	'to do'	<i>deseiñ</i>	'to undo'
<i>agertu</i>	'to appear'	<i>desagertu</i>	'to disappear'
<i>ixen</i>	'name'	<i>esixen</i>	'nickname'

desixen

(67) A related noun is *pasiú* 'walk, stroll', whose inessive plural is *pasiúétan*.

(68) The causative of *ikusi* 'to learn' (*irakatsi* 'to teach' in other dialects) has been lost in Lekeitio and *erakutzi*, causative of *ikusi* 'to see', has acquired the meaning of 'to teach' in addition to its expected meaning of 'to show, cause to see' (very likely under the influence of Spanish *enseñar* 'to show, to teach').

<i>esagun</i>	'known'	<i>esesagun</i>	'unknown'
<i>ikusi</i>	'see'	<i>esikúsi</i> (<i>eiñ</i>)	'(to pretend) not to see'

3.4. Compounding

There are several productive processes of compounding for the formation of both nouns and verbs, together with a few others of lesser productivity. Compound nouns and compound verbs will be considered separately.

3.4.1. Compound nouns

N+N co-compounds. There is a pattern in which two nouns N₁ and N₂ are compounded; the resulting compound noun having the meaning 'set of N₁'s and N₂'s'. This pattern can be used productively in the literary language (cf. Azkarate 1993). In lexicalized cocompounds the order of the two members cannot be altered (cf. Jacobsen 1982). In Lekeitio we find the following examples:

(360) N+N cocompounds

<i>semealábak</i>	'children' (<i>seme</i> 'son' + <i>alaba</i> 'daughter')
<i>nebarrébak</i>	'siblings' (<i>neba</i> 'brother' + <i>arreba</i> 'sister')
<i>andragixónak</i>	'married couple' (<i>andra</i> 'woman' + <i>gixon</i> 'man')
<i>neskamutilak</i>	'group of boys and girls' (<i>neska</i> 'girl' + <i>mutill</i> 'boy')

N+N subcompounds. In addition to cocompounds, there is another pattern of N+N compounding, where the first noun modifies the second one (the head of the compound is, thus, its second member):

(361) N+N subcompounds

<i>artabúru</i>	'ear of corn' (<i>arto</i> 'corn' + <i>buru</i> 'head')
<i>basérri</i>	'farm' (<i>baso</i> 'forest' + <i>erri</i> 'village')
<i>barregura</i>	'urge to laugh' (<i>barre</i> 'laughter' + <i>gura</i> 'desire')
<i>asgúra</i>	'(urge to) itch' (<i>atz</i> 'itch' + <i>gura</i> 'desire')
<i>negargura</i>	'urge to cry' (<i>negar</i> 'cry' + <i>gura</i> 'desire')
<i>logura</i>	'urge to sleep' (<i>lo</i> 'sleep' + <i>gura</i> 'desire')
<i>biximodu</i>	'way of life' (<i>bixi</i> 'life' + <i>modu</i> 'manner')
<i>elixáte</i>	'church door' (<i>eliax</i> 'church' + <i>ate</i> 'door')
<i>elixáurre</i>	'church front' (<i>eliax</i> 'church' + <i>áurre</i> 'front')
<i>etxeáurre</i>	'house front' (<i>etxe</i> 'house' + <i>áurre</i> 'front')
<i>etxeátze</i>	'house back' (<i>etxe</i> 'house' + <i>átze</i> 'back')
<i>etxeónodo</i>	'side of house' (<i>etxe</i> 'house' + <i>ondo</i> 'side')
<i>gautxóri</i>	'night bird' (<i>gau</i> 'night' + <i>txori</i> 'bird')
<i>kalatxori</i>	'seagull' (<i>kala</i> 'fishing ground' + <i>txori</i> 'bird')
<i>torratxori</i>	'sparrow' (<i>torre</i> 'tower' + <i>txori</i> 'bird')
<i>kanpatórre</i>	'belltower' (<i>kanpai</i> 'bell' + <i>tórre</i> 'tower')
<i>idipróbak</i>	'ox competition' (<i>idi</i> 'ox' + <i>próba</i> 'test')

<i>astopróbak</i>	'donkey competition' (<i>asto</i> 'donkey' + <i>próbak</i> 'test')
<i>probaléku</i>	'arena' (<i>próbak</i> 'test' + <i>léku</i> 'place')
<i>odolóste</i>	'blood sausage' (<i>odol</i> 'blood' + <i>este</i> 'intestine')
<i>ogisáti</i>	'piece of bread' (<i>ogi</i> 'bread' + <i>sati</i> 'piece')
<i>okelasáti</i>	'piece of meat' (<i>okela</i> 'meat' + <i>sati</i> 'piece')
<i>sagárdau</i>	'cider' (<i>sagar</i> 'apple' + <i>ardau</i> 'wine')
<i>titikume</i>	'baby' (<i>titi</i> 'teat' + (<i>k)ume</i> 'child')
<i>txakurkuna</i>	'puppy' (<i>txakur</i> 'dog' + <i>kuna</i> 'offspring')
<i>txakurkúma</i>	'puppy'
<i>katukuna</i>	'kitten' (<i>katu</i> 'cat' + <i>kuna</i> 'offspring')
<i>katukúma</i>	'kitten'
<i>otzikára</i>	'rash' (<i>otz</i> 'cold' + <i>ikara</i> 'fear')
<i>oskírri</i>	'chill' (<i>otz</i> 'cold' + <i>kírri</i> 'shiver')
<i>neskalágun</i>	'girlfriend' (<i>neska</i> 'girl' + <i>lagun</i> 'friend')
<i>mutil-lágun</i> ⁶⁹	'boyfriend' (<i>mutil</i> 'boy' + <i>lagun</i> 'friend')
<i>soróantz</i>	'mad look' (<i>soro</i> 'mad' + <i>antz</i> 'look, aspect')

N+N exocentric compounds. A third pattern of N+N compounding is shown by compounds with an adjectival meaning, usually not directly predictable from the meaning of its components (some of them also have a literal, subcompound, interpretation):

(362) N+N exocentric compounds

<i>artabúru</i>	'idiot' (<i>arto</i> 'corn' + <i>buru</i> 'head')
<i>ogisáti</i>	'good-natured' (<i>ogi</i> 'bread' + <i>sati</i> 'piece')
<i>amasúlo</i>	'mom's kid' (<i>ama</i> 'mother' + <i>sulo</i> 'hole')
<i>aittasúlo</i>	'dad's kid' (<i>aitta</i> 'father' + <i>sulo</i> 'hole')
<i>amabitxi</i>	'godmother' (<i>ama</i> 'mother' + <i>bitxi</i> ⁷⁰)
<i>aittabítxi</i>	'godfather' (<i>aitta</i> 'father' + <i>bitxi</i>)
<i>umemóko</i>	'brat' (<i>ume</i> 'child' + <i>móko</i> 'mucus')
<i>pot(r)osórri</i>	'annoying person' (<i>potro</i> 'testicle' + <i>sorri</i> 'louse')
<i>itxaskábra</i>	'type of fish' (<i>itxas</i> 'sea' + <i>kábra</i> 'goat')
<i>astopótro</i>	'brute' (<i>asto</i> 'donkey' + <i>pótro</i> 'testicle')

These are exocentric compounds. As indicated, their meaning is not purely componential. For instance, *artaburu* in its figurative interpretation conveys the meaning of 'someone whose head (*buru*) is made out of corn (*arto*)'; *ogisáti* is 'someone who is like a piece of bread',⁷¹ *aittasúlo* is 'someone who is like a hole on his/her father', etc.

N+ A compounds. Another common pattern is that presented by compound nouns which have a noun as first member and an adjective as second member.⁷²

(69) [mutiláyun].

(70) The word *bitxi* is used with the meaning of 'adornment, decoration' in other dialects. In Lekeitio it is not known as an independent word. On the other hand, *bitxi* in these compounds may be related to the numeral *bi* 'two'.

(71) Cf. Sp. *cacho-pán*, with the same meaning.

(72) This is the normal colocation of nouns and adjectives. Compounds are, nevertheless, distinguished from sequences of noun and adjective in that generally they present lexical accent.

These can be subcompounds (e.g.: *astesántu* ‘week+ holy’ = ‘Holy Week’) or exocentric compounds (e.g.: *egalúse* ‘fin+ long’ is not a long fin; but, rather, it is a fish whose fin is long):

(363) N+Adj subcompounds

<i>aittasántu</i>	‘Pope’ (<i>aitta</i> ‘father’ + <i>sántu</i> ‘holy’)
<i>astesántu</i>	‘Holy Week’ (<i>aste</i> ‘week’ + <i>sántu</i> ‘holy’)
<i>aittagura</i>	‘Our Father’ (<i>aitta</i> ‘father’ + <i>gure</i> ‘our’)
<i>amabirjíñia</i>	‘Holy Virgin’ (<i>ama</i> ‘mother’ + <i>birjíñia</i> ‘virgin’)
<i>atzósar</i>	‘old woman’ (<i>atzo</i> ‘old woman’ + <i>sar</i> ‘old’)
<i>agurásar</i>	‘old man’ (<i>agura</i> ‘old man’ + <i>sar</i> ‘old’)
<i>mutílsar</i>	‘old bachelor’ (<i>mutill</i> ‘boy’ + <i>sar</i> ‘old’)
<i>neskásar</i>	‘spinster’ (<i>neska</i> ‘girl’ + <i>sar</i> ‘old’)
<i>lagúntzar</i>	‘old friend’ (<i>lagun</i> ‘friend’ + <i>sar</i> ‘old’)
<i>sagúsar</i>	‘bat’ (<i>sagu</i> ‘mouse’ + <i>sar</i> ‘old’)
<i>ikomélau</i>	‘overripe fig’ (<i>iko</i> ‘fig’ + <i>melau</i> ‘overripe’)
<i>maspása</i>	‘raisin’ (<i>matz</i> ‘grape’ + <i>pasa</i> ‘ripe’)
<i>arnasestu</i>	‘puff’ (<i>arnasa</i> ‘breath’ + <i>estu</i> ‘narrow’)

(364) N+Adj exocentric compounds

<i>be(g)igórri</i>	‘red eye’ (<i>be(g)i</i> ‘eye’ + <i>gorri</i> ‘red’)
<i>buruándi</i>	‘bigheaded’ (<i>buru</i> ‘head’ + <i>andi</i> ‘big’)
<i>burugógor</i>	‘stubborn’ (<i>buru</i> ‘head’ + <i>gogor</i> ‘hard’)
<i>ulelúse</i>	‘long-haired’ (<i>ule</i> ‘hair’ + <i>luse</i> ‘long’)
<i>ulelábur</i>	‘short-haired’ (<i>ule</i> ‘hair’ + <i>labur</i> ‘short’)
<i>arpeilúse</i>	‘long-face’ (<i>arpei</i> ‘face’ + <i>luse</i> ‘long’)
<i>arpeibiribill</i>	‘round-face’ (<i>arpei</i> ‘face’ + <i>biribill</i> ‘round’)
<i>arpéiloí</i>	‘dirty-face’ (<i>arpei</i> ‘face’ + <i>loi</i> ‘dirty’)
<i>uskíloí</i>	‘annoying person’ (<i>úski</i> ‘buttocks’ + <i>loi</i> ‘dirty’)
<i>popérre</i>	‘annoying person’ (<i>pópa</i> ‘buttocks’ + <i>erre</i> ‘burn’)
<i>bustánbaltz</i>	‘type of fish’ (<i>bustan</i> ‘tail’ + <i>baltz</i> ‘black’)
<i>egalúse</i>	‘type of tuna fish’ (<i>ega</i> ‘wing, fin’ + <i>luse</i> ‘long’)
<i>egalábur</i>	‘type of tuna fish’ (<i>ega</i> ‘wing, fin’ + <i>labur</i> ‘short’)
<i>usaingoso</i>	‘perfume’ (<i>usaiñ</i> ‘smell’ + <i>goso</i> ‘tasty’)

3.4.2. Compound verbs

A great number of verbs are formed with *eiñ* ‘to do, make’ preceded by a noun, usually in its uninflected form, but in a few cases in the absolute singular or plural:

(365) N+eiñ compounds

<i>bakíak eiñ</i>	‘to make peace’ (bake ‘peace’)
<i>barre eiñ</i>	‘to laugh’ (barre ‘laughter’)
<i>biarra eiñ</i>	‘to work’ (biar ‘work’)
<i>kaka eiñ</i>	‘to defecate’ (kaka ‘excrement’)

karíño eiñ	'to caress' (karíño 'affection')
putz eiñ	'to blow' (putz 'onomatopoeia')
fállo eiñ	'to miss' (fállo 'miss')
lo eiñ	'to sleep' (lo 'sleep')
negar eiñ	'to cry' (negar 'tear')
txilížo eiñ	'to scream' (txilížo 'scream')
sarata eiñ	'to make noise' (sarata 'noise')
didar eiñ	'to shout' (didar 'shout')
sálto eiñ	'to jump' (sálto 'jump')
sintz eiñ	'to blow one's nose' (sintz 'onomatopoeia')
agur eiñ	'to wave goodbye' (agur 'goodbye')
txálo eiñ	'to applaud' (txálo 'applause')
txixa eiñ	'to urinate' (txixa 'urine')
usaiñ eiñ	'to smell' (usaiñ 'smell')
kásu eiñ	'to pay attention' (<i>kásu</i> 'attention') 'to greet with a sign'
estul eiñ	'to cough' (estul 'cough')
doministíku eiñ	'to sneeze' (doministíku 'sneeze')
txístu eiñ	'to whistle' (txístu 'whistle')
kíñu eiñ	'to blink' (kíñu 'blink')
sópak eiñ	'to dip' e.g. bread in milk (sópak 'soup')
plantía eiñ	'to fake' (plánta 'fake')
plántak eiñ	'to clown'
frénte eiñ	'to confront' (frénte 'front')
sáunka eiñ	'to bark' (sáunka 'bark')
tópo eiñ	'to bump into' (tópo 'bump')

Some compound verbs with *eiñ* take an adverbial form in /-ka/ or a noun in the inessive case (which can have an adverbial function, cf. 3.3.4):

(366) Adverb + *eiñ* compounds

auskáka eiñ	'to fight'
ostíka eiñ	'to fight'
kartétan eiñ	'to play cards' (karta 'card')
singan eiñ	'to row with one oar'
billarrian eiñ	'to play billiard' (billar 'billiard')
amesetan eiñ	'to dream' (ames 'dream')

The verb *eiñ* acquires the meaning of 'to go' when used with a noun inflected with the directional locative suffix /-rutz/ or /-ratz/ 'towards':

(367) Directional N + *eiñ*

gorutz eiñ	'to go upward' (goi 'above')
beratz eiñ	'to go downward' (be 'below, under')
etxeratz eiñ	'to go home' (etxe 'house')
plasarutz eiñ	'to go towards the square' (plasa 'square')

aurrératz eiñ	'to go/move forward' (áurre 'front')
atzératz eiñ	'to go/move backward' (átze 'back')

There are also some compound verbal expressions with other verbs:

(368) Compound verbal expressions with verbs other than eiñ

aurría artun	'to take the lead' (áurre 'front'; artun 'to take')
arnasia artun	'to breathe' (arnasa 'breath'; artun 'to take')
mosu emon	'to kiss' (mosu 'kiss'; emon 'to give')
kontúak atara	'to reckon up' (kóntu 'account, bill'; atara 'to take out') ⁷³
lekúa gorde	'to watch someone's place' (léku 'place'; gorde 'to keep')
biaján žun	'to go on a trip' (biáje 'trip'; žun 'to go')
tirúa bota	'to shoot' (tíro 'shot'; bota 'to throw')
gomintxúak bota	'to vomit' (gomintxúak 'vomit'; bota 'to throw')
txálo žo	'to applaud' (txálo 'applause'; žo 'to hit')
burus ikasi	'to learn by heart' (buru 'head'; ikasi 'to learn')
kontú(t)an žausi	'to realize' (kóntu 'account'; žausi 'to fall') ⁷⁴
tinbría žo	'to ring the bell' (tínbre 'bell'; žo 'to hit')
atian žo	'to knock on the door' (ate 'door'; žo 'to hit')
gusurra esan	'to lie' (gusur 'lie' + esan 'to say')
ariñaríngā žun	'to run' (ariñ 'quick'; žun 'to go')
soñian eruan	'to wear' (soñian 'wearing'; eruan 'to carry')

Causative verbs are productively formed with eraiñ 'to cause':

(369) Causative verbs

ekarri eraiñ	'to make bring'
žun eraiñ	'to make go'
žan eraiñ	'to make eat'
artun eraiñ	'to make take'

(73) Cf. Sp. *sacar las cuentas*.

(74) Cf. Sp. *caer en la cuenta*.

4. SYNTAX

In this chapter some of the most basic syntactic characteristics of Lekeitio Basque are reviewed. The presentation will be much less complete than in the chapters on Phonology and Morphology. A reason for not presenting a more thorough description is that syntactic differences among Basque varieties are relatively small, as compared to the differences that are found at the phonological and morphological levels. Most of the information on Syntax given in Basque grammars is directly applicable to the Lekeitio variety. Another reason is the less contained nature of syntactic phenomena, which precludes exhaustive treatment in a book like this. The scope of this chapter is, thus, rather limited. The main topic of this chapter is the structure and types of simple and complex sentences. Some information on the structure of the noun phrase can be found in chapter 3 (section 3.1).

4.1. Order of constituents: The syntax of focalization

A basic principle governing word order in Basque is that the focus, or most important information in the sentence, is placed in preverbal position (and receives focus accent, indicated here with a circumflex accent, cf. section 2.8.6).¹ Other constituents may appear either as topics before the focalized constituent, or in postverbal position. Sentences with more than one constituent in prefocus position are generally dispreferred (i.e., generally, there is, at most, one topic). Question words are placed in the same position as focalized constituents. Thus, each of the declarative sentences in (1), (2) would be an appropriate answer to the corresponding prime interrogative sentence:

- (1) a. *lagunak txakurrâ ekarri-dau gaur goixian*
friend.E dog. A bring AUX today morning
'the friend brought THE DOG this morning' /
'the friend brought the dog this morning'
a'. *sêr ekarri-dau lagunak gaur goixian?*
'what did the friend bring this morning'
b. *txakurra lagunâk ekarri-dau gaur goixian*

(1) The discovery of this principle is attributed to Altube (1929). Cf. also de Rijk (1969, 1978), Goenaga (1978), Michelena (1981), Ortiz de Urbina (1983, 1989), Arejita (1985), Eguzkitza (1986), Osa (1990). The focalized element is referred to as *elemento inquirido* (in Spanish) or *galdegaia* (in Basque) in the Basque linguistic tradition.

- 'THE FRIEND brought the dog this morning'
- b'. *nôk ekarri-dau txakurra gaur goixian?*
 'who brought the dog this morning?'
- c. *txakurra gaur goixiân ekarri-dau lagunak*
 'the friend brought the dog THIS MORNING'
- c'. *nôix ekarri-dau txakurra lagunak?*
 'when did the friend bring the dog?'
- (2) a. *gaur goixian aittâ etorri -da*
 today morning father.A come AUX
 'this morning FATHER came' / 'this morning father came'
 a'. *nôr etorri-da gaur goixian?*
 'who came this morning?'
 b. *aitta gaur goixiân etorri-da* b'. *nôix etorri-da aitta?*
 'father came THIS MORNING' 'when did father come?'

Now, in a context where the whole sentence constitutes new information and, thus, there is no particular pragmatic focus, the order would be as in the examples (1a) and (2a). That is, in the most neutral order, the intransitive subject or the direct object occupies preverbal position (and receives focus accent). Sentences (1a) and (2a) are thus pragmatically ambiguous between an interpretation where the preverbal constituent is understood as focus of the sentence and another interpretation where no constituent is pragmatically focalized.²

The affirmation itself can be the focus of the sentence. That is, what is asserted may be the realization of the event expressed in the sentence. In this case the participle receives focus accent:

- (3) *aitta etorri da gaur goixian* (4) *lagunak ekarriko dau*
 'father DID come this morning' 'the friend WILL bring it'

If what is asserted is the kind of action or event expressed by the verb, the verb *eiñ* 'to do, make' is inserted between main participle and auxiliary, the participle also receiving focus accent:

- (5) *gaur goixian sure laguna etorrî eiñ dda*
 today morning your friend.A come do AUX
 'this morning your friend CAME' (e.g., instead of going)

In constructions with the semiauxiliary *nai* 'to want', the focalized element is placed immediately before the semiauxiliary. The main verb will appear preceding the semiauxiliary if it is focalized, otherwise it will be placed after the inflected auxiliary (cf. section 3.2.5):

- (6) a. *Mikélek gêwas nai-dau etorri*
 Mikel.E we.C want-AUX come
 'Mikel wants to come WITH US'

(2) As a result, the most frequent order will be SOV (cf. de Rijk 1969).

- b. *Mikélek etorrî nai-dau gúas* c. *Mikélek nái dau gúas etorri*
 'Mikel wants TO COME with us' 'Mikel WANTS to come with us'

This does not extend to the semiauxiliary *biar* 'must' which, unlike *nai*, is always preceded by the main verb:

- (7) a. *erložuâ erosi biar-leuko / *erložuâ biar-leuko erosi*
 watch.A buy must-AUX b. *erložua erosâ eiñ bir-leuko*
 's/he must buy THE WATCH' 's/he must BUY the watch'

As for the potential auxiliary *al*, it usually receives focus accent and triggers the postponing of the main verb:

- (8) a. *Induraiñek âl dau irabasi aurtengo turra be*
 Indurain.E canAUX win this-year.of tour too
 'Indurain CAN win this year's Tour of France too'
 b. *? Induraiñek al dau irabasi aurtengo turra be³*
 'INDURAIN can win this year's Tour of France too'
 c. ** Induraiñek irabasî al dau aurtengo turra be*

To focalize a different element in a potential sentence, the potential forms of the auxiliary must be used instead of the semiauxiliary *al*:

- (9) a. *Induraiñek irabasi-léike aurtengo turra*
 'INDURAIN can win this year's Tour'
 b. *Induraiñek irabasî léike aurtengo turra*
 'Indurain CAN win this year's tour'
 c. *Induraiñek irabasî ein léike aurtengo turra*
 'Indurain can WIN this year's tour'

In spite of everything said so far about the position of focalized elements, in copulative sentences the pragmatic focus often occurs in postverbal position:

- (10) —nôr da Rufo Atxúrra?
 who is 'who is Rufo Atxurra?'
 —Rufo Atxúrra da or žesarríta dagon gixona
 is there sit.PP is.REL man.A
 'Rufo Atxurra is the man who is sitting over there'

- (11) —nôr da Clínton?
 'who is Clinton?' —Clínton da Amerikáko presidentía
 'Clinton is the president of America'

The pragmatic focus may occasionally appear in postverbal position in other monoclausal constructions as well (cf. Osa 1990); but, in such cases, the focus would be dislocated, in an extrasentential position (signaled by a pause or break of some type):

(3) This is possible as an echo question.

- (12) *kaskúa étxen dábe, ba ondorâ*
 hulk.A do.I AUX well sink
 'the hulk they, well, SINK it'

Without a pause after the verb, an example such as the following, where the focus is postverbal, is impossible:

- (13) —*sér erosi dósu?* —**erosi dot alkondára barri bat*
 what buy AUX buy AUX shirt new one
 'what have you bought?' 'I have bought a new shirt'

In direct object clauses and other noun clauses, the subordinate clause may contain the focalized element, which is positioned with respect to the subordinate verb:

- (14) *maixúak pregunta eban ïa nok ekižan erantzúna*
 teacher.E ask AUX CP who.E s/he-knew answer.A
 'the teacher asked WHO KNEW THE ANSWER'

- (15) *Pérük esan dau bižár etorriko dala*
 Peru.E say AUX tomorrowcome.F AUX-CP
 'Peru has said that he will come TOMORROW'

Other types of subordinate clauses do not contain a focus position.

4.2. Negative sentences

Sentence negation is expressed by means of the negative particle *es*, which cliticizes to a conjugated verb form. In negative clauses, the unit formed by the negative particle *es* and the semiauxiliary is preposed. The focalized element appears before the preposed auxiliary. Other constituents may appear between the preposed auxiliary and the participle:

- (16) *txakurrâ estau ekarri sure lagunak*
 'your friend did not bring THE DOG'

The constituent preceding the participle in these negative constructions cannot receive focus accent:⁴

- (17) **txakurra estau sure lagunâk ekarri*

(4) This goes against de Rijk's (1969: 344) and Lafitte's (1979: 48-49) description of focalization in negative sentences (cf. also Osa 1990: 198-213, Saltarelli 1988: 92). It seems clear that there are important differences among dialects in the position of focalized elements in negative clauses. Lafitte's (1979: 49) example *Ez du aitak aurdiki* 'Ce n'est pas le père qui l'a jeté' would correspond in Lekeitio to *aittâk estau bota* 'FATHER has not thrown it'. Nevertheless, in Lekeitio it is possible to place a constituent with contrastive interpretation (contrastive focus) after the auxiliary, but in this case focus accent must fall on the auxiliary, not on the postverbal constituents: *txakurra estau sure lagunâk ekarri, amak baiño* 'your friend did not bring the dog, mother did'. This contrastive focus phenomenon is thus different from the focalization phenomenon described in this section, which is connected with focus accent.

Focus accent may only fall on the constituent preceding the auxiliary as in (16) above or on the negation-carrying inflection as in the following example:

- (18) *sure lagunak txakurra estâu ekarri*
'your friend did NOT bring the dog'

The unmarked case in a negative sentence is for the negation+auxiliary unit to receive focus accent. Compare also the following examples:

- (19) a. *aittâ esta etorri*
 father.A not-AUX come
 'FATHER did not come'
 (context: who didn't come?)

b. *aitta estâ etorri*
 'father did NOT come'
 (context: did father come?)

In negative sentences with a semiauxiliary, the semiauxiliary is not preposed.

- (20) a. *estau nai Bilbôra žun*
 not-AUX want Bilbao.AL go
 's/he doesn't want to go TO BILBAO'
 b. *Bilbôra estâu nai žun*
 's/he does NOT want to go to Bilbao'
 c. *žûn estau nai Bilbôra / Bilbôra žûn estau nai*
 's/he doesn't want TO GO to Bilbao'

4.3. Interrogative sentences

Yes-no questions are usually distinguished from declaratives solely by their intonation (cf. section 2.9):

- (21) a. *txakurrâ ekari-dâbe*
dog.A bring AUX
'they brought THE DOG'

b. *txakurrâ ekari-dâbe?*
'did they bring THE DOG?'

In yes-no questions the focus accent normally falls on the main verb:

In emphatic questions the particle *ála* 'or' appears in final position:

Leading questions carry the tag *esta?* 'is it not?':

In question-word questions (partial questions), the interrogative word or phrase appears in focus position and receives focus accent:

- | | |
|-------------------------------|--------------------------------------|
| (28) <i>sér ekarri -dábe?</i> | (29) <i>nôri emon dotzásu dirua?</i> |
| what bring AUX | who.D give AUXmoney.A |
| 'what did they bring?' | 'to whom did you give the money?' |

4.4. Sentence types

4.4.1. Copulative sentences

There are two copulas *ixan* 'to be' and *egon* 'to be, stay', which have the same semantic distribution as Spanish *ser* and *estar*, respectively. In addition, *egon* has the value of 'there be':

- | | |
|-------------------------------------|---------------------------------------|
| (30) <i>Górka mariñela dâ</i> | (31) <i>Péru alkatia dâ</i> |
| 'Gorka is a sailor' | 'Peru is the mayor' |
| (32) <i>Górka altúa da</i> | (33) <i>Míkel lodi lodi dagô</i> |
| 'Gorka is tall' | 'Mikel is/looks very fat' (temporary) |
| (34) <i>Míren triste dago</i> | (35) <i>Miren etxian dagô</i> |
| 'Miren is sad' | 'Miren is at home' |
| (36) <i>katu bat dagô tellatúan</i> | |
| cat one.A is roof.IN | |
| 'there is a cat on the roof' | |

The verb *eiñ* 'to do, make' can be used as a quasi-copulative verb with the meaning of 'to become' conjugated with the intransitive auxiliary (cf. Sp. *hacerse*). In this construction the nominal predicate appears in uninflected form:

- | | |
|-------------------------------|---|
| (37) <i>ura ardâu eiñ-san</i> | (38) <i>nire anaižia abogâu eiñ-dda</i> |
| water.A wine do-AUX | my brother.A lawyer do-AUX |
| 'the water became wine' | 'my brother has become a lawyer' |

The notion of 'to become' is also expressed by verbs derived from adjectives such as *berdetu* 'to become green', *tontotu* 'to become stupid', *morenotu* 'to get a tan', etc.:

- | |
|---------------------------------------|
| (39) <i>orrížak berdetû eiñ diras</i> |
| leaves.A turn-green do AUX |
| 'the leaves have turned green' |

4.4.2. Secondary predication

Nominals used as secondary predicates appear in uninflected form:

- | | |
|--|----------------------------------|
| (40) <i>Ardanza elejiru-ében lendakari</i> | (41) <i>kulpâble topa-ebésen</i> |
| elect-AUX president | guilty find-AUX |
| 'they elected ARDANZA president' | 'they found them GUILTY' |

4.4.3. Intransitive and transitive sentences: Auxiliary selection

Generally speaking, transitive verbs are conjugated with the transitive auxiliary and intransitive verbs with the intransitive auxiliary. There are, nevertheless, some important exceptions (cf. Lafitte 1979: 189-190, Levin 1983, Ortiz de Urbina 1989: 39-61). To begin with, a number of intransitive verbs are compound verbs with *eiñ* 'to do, make' and select the transitive auxiliary; e.g. *nik lo eiñ dot* 'I have slept', *barre eiñ dogu* 'we have laughed', *negar eiñ neban* 'I cried' (cf. section 3.4.2 for a list of compounds with *eiñ*). In addition, a group of simple intransitive verbs also take the transitive auxiliary. Lafitte calls these verbs 'deponent' and Levin and Ortiz de Urbina 'unergative'. In Lekeitio this group includes the following verbs:

(42) Intransitive verbs which take the transitive auxiliary

irakin 'to boil'

urten 'to leave'

urak irakî rau

gixonâk urten-dau

water.E boil AUX

man.E leave-AUX

'the water HAS boiled'

'THE MAN has left'

korridu 'to run'

gaur Kóldok askô korridu-dau

today Koldo.E a lot run-AUX

'today Koldo has run A LOT'

žokatu 'to play'

bizar Osasúnak Real Madrideren kôutra žokatzén-dau

tomorrow Osasuna.E Real Madrid.E against play.I-AUX

'tomorrow Osasuna is playing AGAINST REAL MADRID'

olga 'to play'

goix gustižân olga-dábe umiak

morning all.IN play-AUX kids.E

'the kids have played ALL MORNING LONG'

dimitidu 'to resign'

segidu 'to continue'

alkatiâk dimitidu-dau

Mikélek arrêra segidu eban

mayor.E resign-AUX

Mikel.E front.AL continue-AUX

'THE MAYOR has resigned'

'Mikel kept going ONWARDS'

afaldu 'to have supper'

amarrettan afalduko-dógu

ten.IN.p have supper.F-AUX

'we will have supper AT TEN'

baskaldu 'to have dinner'

atzo arratsaldéko irurêtan baskaldu-gendun

yesterday afternoon.of three.IN dine-AUX

'yesterday we had dinner AT THREE in the afternoon'

armosa 'to have breakfast'

argititu 'to become clear'

illundu 'to become dark'

egunak argitth-dau

illundu eiñ ddau

day.E become-clear-AUX

'it has become dark'

'the day has cleared up'

<i>tarda</i> 'to take time'		
<i>denpôra asko tarda-dau ori éitten</i>		
time a lot take-AUX that do.I		
's/he has taken A LONG TIME to do that'		
<i>žo</i> 'to go'	<i>funciona</i> 'to work'	
<i>Ondarrûra žo-dau Mikélek</i>	<i>kotxiak estâu funzionáten</i>	
Ondarroa.AL go-AUX Mikel.E	car.E not-AUXwork.I	
'Mikel has gone to ONDARROA'	'the car doesn't work'	
<i>brilla</i> 'to shine'		
<i>gaur eguskîžak estâu brilláten askorik</i>		
today sun.E not-AUXshine.I much.PT		
'today the sun is not shining much'		
<i>entrena</i> 'to train'		
<i>Usúek Gasteisén entrenatén-dau</i>		
Usue.E Gasteiz.IN train.I-AUX		
'Usue trains IN GASTEIZ'		
<i>ion</i> 'to go up, to climb'		
<i>Otaízora astêro ioten-gendúan gastíak giñinian</i>		
Otoio.AL every-week climb.I-AUX young.A.p we-were.when		
'we used to go up to Mount Otoio ⁵ EVERY WEEK when we were young'		
<i>altza</i> 'to clear up' (weather)		
<i>eweldižak altzâ eiñ-ddau</i>		
weather.Eclear-up do-AUX		
'the weather has cleared up'		

Transitive verbs are used in intransitive constructions in several cases. First of all, some verbs allow both a transitive and an intransitive (middle) interpretation. This group includes such verbs as *asarratu* 'to make/become angry', *arduratu* 'to worry', *postu* 'to render/become happy', *apurtu* 'to break', etc.:

- (43) a. *orrekk mutillak asarratû eittén-nau*
that.E boy.E become-angry do.I-AUXtr
'that boy MAKES me angry'
- b. *askotân asarratzén-nas*
often become-angry-AUXintr
'I often get upset'
- (44) a. *mutillak bentanîa apurru-eban* b. *bentanîa apurru-san*
boy.E window.A break-AUXtr window.A break-AUXintr
'the boy broke the window' 'the window broke'
- (45) a. *rradižúan entzun doten notisîžak arduratû eiñau*⁶
radio.IN hear AUX-REL news.E worry do-AUXtr
'the news I have heard on the radio has WORRIED me'

(5) Name of a mountain near Lekeitio. The name has three variants in Lekeitio: *Otaízo*, *Otoyo* and *Otóyo*.
(6) *eiñ-nau*.

- b. *umien gurasúak arduratú ein-sirian*
 children.G parents.A worry do-AUXintr
 'the children's parents got WORRIED'
- (46) a. *onégas legiágas mundu gustižá postukóu⁷*
 this.C law.C world all.A make-happy.F-AUXtr
 'with this law we will make EVERYBODY happy'
 b. *nik pentzáten dot postáko dala*
 I.E think.I AUX be-happy.F AUXintr-CP
 'I think he WILL be happy'

Secondly, there is an impersonal/passive construction in which the intransitive auxiliary is used with all verbs:

- (47) a. *Koldok askô žatén-dau*
 Koldo.E a lot.A eat.I-AUXtr
 'Koldo eats a lot'
 b. *Lekitton arraiñ askô žatén-da*
 Lekeitio.IN fish a lot.A eat.I-AUXintr
 'in Lekeitio one eats a lot of fish'
- (48) a. *nire etxétik mendížak ikusten-dóras*
 my house.AB mountains.A see.I-AUXtr
 'I see the mountains from my house'
 b. *nire etxétik mendížak ikusten-díras*
 my house.AB mountains.A see.I-AUXintr
 'from my house one can see the mountains' / 'the mountains can be seen'

Thirdly, transitive verbs also take the intransitive auxiliary in reflexive and reciprocal constructions (cf. sections 4.4.5, 4.4.6):

- (49) a. *Koldok kotxia garbitzén-dau* b. *Koldo garbitzen da*
 Koldo.E car.A wash.I-AUXtr Koldo.A wash.I-AUXintr
 'Koldo washes the car' 'Koldo washes himself'
- (50) a. *guk mendíža ikusi-dogu* b. *gu kalián ikusi-gara*
 we.E mountain.A see-AUXtr we.A street.IN see-AUXintr
 'we have seen the mountain' 'we have seen each other on the street'

It may be noted that all three cases of intransitivization that have been mentioned correspond to uses of *se* constructions in Spanish.

4.4.4. Causatives

Causatives are formed with *eraiñ* 'to cause'. The causee takes dative inflection (the auxiliary is always a trivalent transitive form):

(7) *postuko+dógu*

- (51) *Péruk Gorkári eskolára žun eraiñ-eutzan*
 Peru.E Gorka.D school.ALgo cause-AUX
 'Peru made Gorka go to school'
- (52) *Péruk Mirenéri urtēn erai-eutzan*
 Peru.E Miren.D leave cause-AUX
 'Peru made Miren leave'
- (53) *Górkak umiari porrusaldia žan eraiñ eutzan*
 Gorka.E child.D leek-soup.A eat cause-AUX
 'Gorka made the child eat the leek-soup'
- (54) *Gorkári maixúak Edurnéri liburúa emon eraiñ-eutzan*
 Gorka.D teacher.E Edurne.D book.A give cause-AUX
 'the teacher made Gorka give the book to Edurne'

4.4.5. Reciprocals

The most basic reciprocal construction is one where the subject is plural and there is an anaphoric reciprocal relation between subject and direct object. In this situation, in Lekeitio Basque reciprocity is marked by intransitivization and optional use of *alkar* 'each other' or *bata-bestia* 'lit. one the other':⁸

- | | |
|---|---|
| <p>(55) a. <i>sure lagúnak maitte-dira</i>
 your friends.A love-AUXintr</p> <p>b. <i>sure lagúnak alkár maitte-dira</i></p> <p>c. <i>sure lagúnak bata bestiá maitte-dira</i>
 'your friends love each other'</p> | <p>(56) a. <i>ikusiko dira</i>
 see.F AUXintr</p> <p>b. <i>alkár ikusiko-díra</i></p> <p>c. <i>bata bestiá ikusiko-díra</i>
 'they will see each other'</p> |
|---|---|

Intransitivization only takes place when the reciprocal is the direct object. If the reciprocal element is an indirect object, on the other hand, a transitive construction is used with *alkar* or *bata-beste* bearing dative inflectional marking (and triggering plural dative agreement on the auxiliary).⁹ The same elements *alkar* and *bata-beste* are used when the reciprocal is any other argument of the verb or a complement in a noun phrase:

- (57) a. *Jon eta Mirének alkarreri liburu bat emo-éutzeren*
 Jon and Miren.E each-other.D book one.A give-AUX
- b. *Jon eta Mirének bata bestiári liburu bat emo-éutzeren*
 each-other.D
- 'Jon and Miren gave each other a book'
- (58) a. *alkarrentzako erregalúak ekarri-ebésen*
 each-other.B presents.A bring-AUX

(8) In other dialects (including the Standard), *alkar* ~ *elkar* requires a transitive structure (e.g. *elkar ikusiko dugu* 'we will see each other' and *bata-bestea* ~ *bata-berzea* cannot occur as direct object (cf. Rebuschi 1993: 122).

(9) In other dialects these anaphoric expressions trigger singular agreement.

- b. *bata-bestientzâko erregalúak ekarri-ebesen*
 each-other.B
 'they brought presents for each other'

(59) a. % *alkarren liburúak irakurri-ebesen*¹⁰
 each-other.G books.A read-AUX
 b. *bata-bestien liburúak irakurri ebesen*
 each-other.G
 'they read each other's books'

(60) a. % *alkarren lagûnik onénak gara*
 each-other.G friend.PT best.Ap we-are
 b. ?*bata-bestien lagúnik onénak gara*
 each-other.G
 'we are each other's best friend'

(61) a. % *alkarren gurasuentzâko ekarri ebesen erregalúak*
 each-other.G parents.B bring-AUX presents
 b. *bata-bestien gurasuentzâko ekarri ebesen erregalúak*
 each-other.G
 'they brought presents for each other's parents'

(62) a. *alkarrêgas žungo-gára*
 each-other.C go.F-AUX
 b. **bata-bestiágas žungo-gára*
 each-other.C
 c. *baterá žungo-gára*
 together
 'we will go together'
 ('with each other')

The expression *bata-bête* can appear in subject position (inflecting for the ergative case if the verb is transitive and triggering singular agreement), but *alkar* cannot have this function:

- (63) a. **ê̄s-takîze alkarrerek ser éingo daben*
 b. *ê̄s-takîze bata-bestíak ser éingo daben*
 not-they-know each-other.E what do.F AUX-CP
 ‘they don’t know what each other will do’¹¹

Alkar cannot appear as complement of a subject either:

(10) The symbol "%" indicates that the example is acceptable for some speakers and unacceptable for other speakers. This is different from cases of dubious grammaticality, marked with a question mark "?", since "%" sentences are perfectly grammatical for the speakers who accept them.

(11) Incidentally, this English sentence is perfectly normal for some speakers of American English and ungrammatical for other speakers of the same language.

There is a third reciprocal expression *bakotxak beste-*, lit. ‘each the other’. In this expression, which has a more limited usage, the first element has a subject role and always appears in the ergative and the second word may vary in its inflection. This is thus an expression consisting of two separate constituents with different case markings, unlike *bata-béste*, which forms a single constituent in the examples given above. Agreement may be singular or plural with this expression, there being a certain amount of variation among speakers:¹²

- (65) *bakotxak bestien liburuak irakurri-dábes/ditxus*
each.E other.G books.A read-AUX.3pE/3sE
'each read the others'/other's books'
- (66) *bakotxak bestiári liburu bat emo-éutzen/eutzan*
each.E other.D book one.A give-AUX.3pE/3sE
'each gave a book to the other(s)'
- (67) *bakotxak bestien gurasuentzáko erregalúak ekarri ebasan/ebésen*
each.E other.G parents.B presents.A bring-AUX.3sE/3pE
'each brought presents for the other's/others' parents'
- (68) *bakotxak bestientzáko erregalúak ekarri-ebasan/ebésen*
each.E other.B presents.A bring-AUX.3sE/3pE
'each brought presents for the other(s)'
- (69) *bâ-dakíze bakotxak bestien alabiak ser éingo daben*
M they-know each.E other.G daughter.E what do.E AUX-CP
'they each know what the other's/others' daughter will do'

There can be an explicit subject in addition to *bakotxak*, in which case *bakotxak* becomes a sort of apposition:

- (70) *Jonek eta Mirének bakotxak bestiári liburu bat emo-éutzen*
Jon.E and Miren.E each.E other.D book bat.A give-AUX
'Jon and Miren, each gave the other A BOOK'
- (71) *Jonek eta Mirének bakotxak bestientzáko erregalúak ekarri-ebésen*
Jon.E and Miren.E each.E other.B presents.A bring-AUX
'Jon and Miren, each brought presents FOR THE OTHER'
- (72) *Jonek eta Mirének bakotxak bestien gurasuentzáko ekarri-ebásen erregalúak*
Jon.E and Miren.E each.E other.C parents.B bring-AUX presents.A
'Jon and Miren each brought presents for the other's PARENTS'

Bakotxak can be used as subject of a subordinate clause as well:

- (73) *ba-dakíze bakotxak ser éingo daben*
'each knows what the other will do'

(12) Some speakers report that they obtain different interpretations depending on whether singular or plural agreement is used. With singular agreement there are only two individuals involved. With plural agreement the interpretation is that there are three or more individuals. Not everyone agrees with this intuition.

The expression *bata bête* ‘each other’, which in all the examples above functions as a single argument, can also optionally be split into two constituents, taking *batak* the subject role (and triggering singular agreement), as in (74a) (cf. (74b), where *bata bestiāri* is a single dative constituent and the subject is third person plural):

- (74) a. *batak bestiári libûru bat emo-eutzan*
 one.E other.D book one.A give-AUX.3sE
 ‘one gave a book to the other’
 b. (*órrek*) *bata bestiári libûru bat emo-éutzen*
 they.E each other.D book one.A give-AUX.3pE
 ‘they gave each other a book’

4.4.6. Reflexives

In sentences where the direct object has the same referent as the subject, an expression with a possessive and *burua* 'head' (*neure burua* lit. 'my head', *seure burua*, *beren(n) burua*, etc) is used as direct object. A second strategy is intrasitivization:¹³

(13) In intransitive reflexive constructions the focus accent generally falls on the verb.

(14) This sentence can also have an interpretation where the expression *beri burua* receives a literal interpretation 'Peru washed his head (by himself)'.

(15) *ein* *nas.*

- (79) a. *arek soruak bere burnâ bota-dau bentanâtik*
 that.E madman.E his head.A throw-AUXtr window.AB
 'that madman has thrown HIMSELF out of the window'
 b. *a sorua bentanâtik bota da*
 that.A madman.A window.AB throw-AUXintr
 'that madman has thrown himself OUT OF THE WINDOW'
- (80) a. *ondô saindu-rot neure burua*
 well take-care-AUXtr my head.A
 b. *ondô saindu-nas*
 well take-care-AUXintr
 'I have taken good care of myself'
- (81) a. *txartô ipiñikó-su seure burua* b. *txartô ipiñiko-sára*
 badly put.F-AUXtr your head.A badly put.F-AUXintr
 'you are going to put yourself in a bad position'
- (82) a. *eskuâñ žo-nas* b. *eskuâ žo-rot*
 hand.IN hit-AUXintr hand.A hit-AUXtr
 'I have hit myself in the hand' 'I have hit my hand'
- (83) *ori neskia askô pintatén-da*
 that.A girl.A lot paint-AUXintr
 'that girl paints herself a lot' (i.e. 'wears a lot of makeup')

In intransitive reflexive constructions, an emphatic pronoun with *bakârrik* 'alone, only' is often used as an intensifier (cf. Sp. *yo solo*, etc.):

- (84) a. *inbittâwak êurak bakârrik serbidu-dira*¹⁷
 guests.A they.A alone serve-AUXintr
 'the guests have served THEMSELVES'
 b. *inbittâwak serbidû dira*
 'the guests HAVE served themselves'
- (86) a. *olako žoko eskaságas, ori pelotariža bera bakârrik*
 like-that game poor.C that.A ball-player.Ahe.A alone
 saldû-da
 sell-AUXintr
 'with that poor playing, that ball-player has sold HIMSELF'
 b. *olako žoko eskaságas, ori pelotariža saldû eiñ-dda*
 'with that poor playing, that ball-player has SOLD himself'

Unlike in reciprocal constructions, not all verbs can be used as intransitive with a reflexive meaning, in particular verbs of emotion can only be used as reflexive with *-burua*:

(16) *eiñ eban*.

(17) Cf. Sp. 'los invitados se han servido ellos solos'.

- (87) a. *Péruk bere buruâ maitte dau*
 'Peru loves himself'
- b. **Pérù maitte-da*
 AUX-intr
- (88) a. *Asierrek bere buruâ gorrotatzén-dau*
 Asier.E his head.A hate.I-AUXtr
 'Asier hates himself'
- b. **Asiér gorrotatzén-da*
 AUXintr

With verbs such as *ill* 'to kill; to die' which have different meanings when used as transitive and as intransitive, the only possibility to obtain a reflexive meaning is with *-burua*:

- (89) a. *Koldok bere buruâ ill-eban*
 Koldo.E his head.A kill-AUXtr
 'Koldo killed himself'
- b. *Kóldo il san*
 Koldo.A die AUXintr
 'Koldo died', not *'Koldo killed himself'

The dative expression *bere buruari* can potentially be used when the subject is coreferential with the indirect object (although, normally the benefactive would be used instead):

- (90) *Péruk bere buruarī emo-eutzan erregálo bat*
 Peru.E his head.D give-AUX present one.A
 'Peru gave HIMSELF a present'

If the reflexive has any other function, either forms with *burua* or simple pronominal forms are used. In the second case ambiguity between a reflexive and a nonreflexive reading obtains:

- (91) a. *Péruk bere buruenzakô nai-dau dana*
 Peru.E his head.B want-AUX everything.A
 'Peru wants everything FOR HIMSELF'
- b. *Péruk berenzakô nai-dau dana*
 3s.B
 'Peru wants everything FOR HIMSELF / FOR HIM/HER'

There is no genitive form of the reflexive expression; instead pronominal forms are used:

- (92) *Mirének bere liburúa leidu-eban*
 Miren.E his/her book.A read-AUX
 'Miren read her (own) /his book'
- (93) *Péruk Mirenéri bere istorižak konta-eutzasan*
 Peru.E Miren.D his/her stories.A tell-AUX
 'Peru told Miren stories about himself/her/him' (lit. 'his/her stories')

When the direct object is a body part or some other possession of the subject, the possessive is optional:

- (94) a. *Górkak arpeižâ garbittu-eban*
 Gorka.E face.A wash-AUXtr.3sE.3sA
 ‘Gorka washed his own face’ (cf. Sp. ‘se lavó la cara’)
- b. *Górkak bere arpeižâ garbittu-eban*
 his/her
 ‘Gorka; washed his;/her face’ (his own or someone else’s)
- c. *Górkak arpeižâ garbittu-eutzan*
 AUXtr.3sE.3sA.3sD
 ‘Gorka; washed his;/her face’ (someone else’s, not his own, cf. Sp. ‘le lavó la cara’)

4.5. Subordination

4.5.1. Noun clauses

4.5.1.1. Subject noun clauses

Subject noun clauses are always nonfinite and are constructed with the verbal noun. For each example several possible word orders and focus assignments are illustrated:

- (95) a. *suk niri ôrrek gáusak esatia(k) molestatén-nau*
 you.E me.D those.A things.A say.VN.E/A bother.I.AUX
 ‘for you TO SAY those things to me bothers me’ (‘it bothers me
 that you SAY those things to me’)
- b. *suk niri ôrrek gáusak esatia(k) molestatén-nau*
 ‘for you to say THOSE THINGS to me bothers me’
- c. *molestâ eittén-nau suk niri ôrrek gáusak esatia(k)*
 ‘it BOTHERS me that you say those things to me’
- d. *suk niri ôrrek gáusak esatia(k) molestâ eittén-nau*
 ‘for you to say those things to me BOTHERS me’
- (96) a. *dirurik es eukittia esžât importáten*
 money.PT not have.VN.A not-AUX bother.I
 b. *esžât importáten dirurik es eukittia*
 ‘not to have any money doesn’t bother me’
 ‘that I/ s/he/you,/they/ etc. don’t have any money doesn’t bother me’
- (97) a. *esžât gustáten su billósik eskolára etortia*
 not-AUX like.I you.A naked school.AL come.VN.A
 ‘I don’t like it for you to come naked to school’
- b. *su billósik eskolára etortia esžat gusiáten*
 ‘I don’t like it for you TO COME naked to school’

- c. *su billōsik eskolára etortia esžat gustáten*
 'I don't like it for you to come TO SCHOOL naked'
- d. *su eskolára billōsik etortia esžat gustáten*
 'I don't like for you to come NAKED to school'
- (98) a. *ardau asko eratia estâ ona*
 wine a lot drink.VN.A not-is good.A
 'to drink a lot of wine is NOT good'
 (or 'for you/ him/her/them/etc. to drink a lot of wine is not good')
- b. *ardau asko eratia esta ona*
 'TO DRINK a lot of wine is not good'
- (99) a. *éurak ainbésté arda eratia estâ ona*
 they.E so much wine drink.VN.A not-is good.A
 'for them to drink so much wine is NOT good'
- b. *éurak ainbésté arda eratia esta ona*
 'FOR THEM to drink so much wine is not good'

4.5.1.2. Indirect statements

Object noun clauses expressing indirect statements are usually finite. If the main clause is affirmative, the conjugated verb of the subordinated clause bears the complementizer suffix /-la/:

- (100) a. *pentzáten dot bižár etorríko dala*
 think.I AUX tomorrow come.F AUX-CP
 'I think s/he will come TOMORROW'
- b. *pentzáten dot bižár etorríko dala*
 'I think s/he WILL come tomorrow'
- (101) *badakîtt Parixen estudižá dosula*
 M-I-know Paris.IN study AUX-CP
 'I know that you have studied in Paris'
- (102) a. *Aitta-Santúa Lekittorâ etorríko dala entzun-neban*
 father-holy.A Lekeitio.AL come.F AUX-CP hear-AUX
 'I heard that the Pope will come TO LEKEITIO'
- b. *Aitta-Santúa etorríko dala Lekittora entzun-neban*
 'I heard that THE POPE will come to Lekeitio'
- c. *Aitta-Santúa Lekittora etorríko dala entzun-neban*
 'I heard that the Pope WILL come to Lekeitio'

An epenthetic vowel [e] is inserted before the suffix /-la/ when the verb to which it attaches ends in a consonant, as one would expect; but it is also inserted in some cases where the conjugated verbal form ends in a vowel which is part of the root (cf.

Arejita 1985: 65).¹⁸ Thus in (103) the verb /d-a-ki/ 's/he knows', takes the suffix -ela. The epenthetic vowel, in its turn, creates the context for insertion of ž :

- (103) a. *frantsēs dakižela díñō / díñō frantsēs dakižela*
 French he-knows-that he-says
 's/he says that s/he knows FRENCH'
 b. *frantses bâ dakižela díñō / díñō frantses bâ dakižela*
 's/he says that s/he DOES know French'

The complementizer /-na/ is optionally used instead of /-la/ when: the main verb expresses complete certainty about the proposition contained in the subordinate clause, and the subordinate clause is not the focus (cf. Arejita 1985: 76-81):

- (104) *badakîtt berandu etorri sariena / sariela*
 M-I-know late come AUX-CP
 'I know that you came late'
- (105) *bâ dakīže orréas neskiáas sabiltzasena / sabiltzasela*
 M they-know that.C girl.C you-walk-CP
 'they know that you are going out with that girl'
- (106) *argi dagô berak apurtú dabela / dabena kristala*
 clear is he.E break AUX-CP glass.A
 'it is clear that s/he has broken the window'
- (107) *egīža da erregia ikusí dotena / dotela*
 truth.A is king.A see AUX-CP
 'it is true that I have seen the king'

In the examples above, the focalized element is in the main clause. If the subordinate clause is in focus, on the other hand, only /-la/ can be used.

When the main clause is negative, the suffix /-nik/ is used instead of /-la/ (with the same conditions for epenthesis):

- (108) *estôt pentzáten bižar etorríko danik / *dala / *dana*
 'I do not think s/he will come tomorrow'

Nevertheless, in negative sentences where the embedded clauses expresses an event that is taken to be certain (which would be expressed in the indicative mood in Spanish), the use of /-nik/ is only optional. If the event embedded under a negative clause is presented as only possible (in the subjunctive in Spanish), on the other hand, /-nik/ must be used. Compare the following examples:

- (109) a. *Mirének esgaixusén esan bátzar bat egon sanik / sana / sala*
 Miren.E not-AUX say meeting one.PT be AUX-CP
 'Miren didn't tell us that there was a meeting' (cf. Sp. 'Miren no nos dijo que hubo una reunión')

(18) There are exceptions. For instance, with /d-o-ya*/ 's/he is going' there is no epenthesis: *doyála* 'that s/he goes'.

- b. *Mirének esgaitxusên esan batzárrik egon sanik / *sana / *sala*
meeting.PT.

'Miren didn't tell us that there was any meeting' (cf. Sp. 'Miren no nos dijo que hubiera ninguna reunión')

4.5.1.3. Indirect questions

Indirect question-word questions are marked with the suffix */-n/* on the conjugated subordinate verb (with epenthesis of [e] under the same circumstances as the other two complementizers seen above):

- (110) *estakîtt noix allagáko disen*
not-I-know when arrive.F AUX-CP
'I do not know when they will arrive'
cf. *nôix allagako-dí(ra)s?* 'when will they arrive?'

If the subordinate verb ends in *-n* (because it is a past tense form), there is no surface suffixation, but the presence of a complementizer can be detected because of the effect it has in impeding the union of participle and complementizer in one prosodic word (cf. section 2.8.5):

- (111) *estakîtt noix allagá sirian*
not-I-know when arrive AUX-(CP)
'I do not know when they will arrive'
cf. *nôix allaga-sirian?* 'when did they arrive?'

- (112) *estakîtt nun erosiko senduan*
not-I-know where buy.F AUX-(CP)
'I do not know where you would buy it'
cf. *nûn erosiko-sendúan?* 'where would you buy it'

With verbs of asking, such as *pregunta* 'to ask', besides the suffix */-n/*, a particle *ia* appears preceding the question word in the subordinate clause when the subordinate clause is in focus:

- (113) a. *maixúak pregunta eban ia nok ekižan erantzúna*
teacher.E ask AUX CP who he-knew-(CP) answer.A
'the teacher asked who knew the answer'
b. *maixúak pregunta eban erantzúna ia nok ekižan 'idem'*
c. *maixúak pregunta eban ia erantzúna nok ekižan 'idem'*
e. *maixúak pregunta eban erantzúna nok ekižan*
'THE TEACHER asked who knew the answer'

- (114) a. *lórak ia nori emónigo eutzasan pregunta-neutzan*
flowers.A CP who.D give.F AUX-(CP) ask-AUX
b. *pregunta neutzan lórak ia nori emónigo eutzasan*
c. *lórak nori emónigo eutzasan pregunta-neutzan*

- d. *ia lórak nori emónigo eutzasan pregunta-neutzan*
 'I asked him/her who s/he was going to give the flowers to'

Indirect yes-no questions can be constructed either with the suffix /-n/ or as conditional structures (as in Spanish or English) with the prefix /ba*/ 'if' on the conjugated verb:

- (115) a. *estakîtt sure laguna etorriko dan*
 not-I-know your friend.A come.F AUX-CP
 b. *estakîtt sure laguna etorriko bá-da*
 if-AUX
 'I don't know if your friend will come'

As with question-word questions, the particle *ia* is generally used with verbs of asking, unless the focus is elsewhere:

- (116) a. *sure lagunak pregunta eustan ia lekittárra banítzan*
 your friend-E ask AUX Lekeitian.A if-AUX
 'your friend asked me IF I was a Lekeitian'
 b. *ia lekittárra banítzan pregunta eustan sure lagunak* 'idem'
 c. *preguntâ eustan lekittárra banítzan*
 's/he ASKED me if a was a Lekeitian'
 d. *lekittárra banítzan pregunta eustan sure lagunak*
 'your friend asked me if I was A LEKEITIAN'
 e. *sure lagunâk pregunta eustan lekittárra banítzan*
 'YOUR FRIEND asked me if I was a Lekeitian'

In questions containing a subordinate yes-no question, the subordinate auxiliary may carry either the suffix /-nik/ or the prefix /ba*/ 'if, whether':

- (117) a. *bâ dakixu súen laguna datorren astian eskondúko danik?*
 M you-know your friend.A it-comes.REL week.IN marry.F AUX-CP
 b. *bâ dakixu súen laguna datorren astian eskondúko báda?*¹⁹
 'do you know whether your friend is getting married next week?'

- (118) a. *entzûn dosúe Induraiñ lélen geldittu danik?*
 hear AUX Indurain.A first stay AUX-CP
 b. *entzûn dosúe Induraiñ lélen geldititu báda?*
 'have you heard whether Indurain has finished first?'

- (119) a. *esân dábe partidorik emónigo dabénik telebisiñoyan?*
 say AUX game.PT give.F AUX-CP television.IN
 b. *esân dábe partidorik emónigo badábe telebisiñoyan?*
 'have they said whether they will offer the game on television?'

(19) Cf. *bâ dakixu súen laguna datorren astian eskondúko dala?* 'do you know that your friend is getting married next week?'

4.5.1.4. Indirect commands

Indirect commands can be expressed by means of nominalizations with the /-ko/ form of the verbal noun:

Another, less common, possibility involves the construction with *euki* 'to have' and the absolute singular of the verbal noun studied in section 3.2.3.11:

- (126) *etxera žutia daukola esan-dotzat*
 house.AL go.VN.A s/he-has-CP say-AUX
 'I told him/her to go home'

(127) *erregalúa Koldōri emotia daukotzela esan-dotzáte*
 present.A Koldo.D give.VN.A they-have-CP say-AUX
 'I told them to give the present TO KOLDO'

(128) *liburua martitzenerako ekartia daukola esan-dotzat*
 book.A Tuesday.for bring.VN.A s/he-has-CP say-AUX
 'I told him/her that s/he had to bring the book BY TUESDAY'

This construction is only possible when the subject of the subordinate clause is a third person. Thus examples (129a), (130a), where the subject of the subordinate

clause is a third person, are grammatical; but (129b), (130b), where the subject of the subordinate verb is a second person, are ungrammatical:

Verbs of volition and semantically similar verbs take nonfinite complements with the verbal noun which, if the main verb is negative, may be inflected in the partitive case:

- (131) *seuk eittâ nai-dot*
 you.E do.VN.A want-AUX
 'I want for you to do it'

(132) *es-tôt nai su moskortúta ibilltia/ibilltérik*
 not-AUX want you drunken walk.VN.A/PT
 'I don't want you to be drunk'

(133) *pentzâ be es eiñ ona etortia/etortérik*
 think too not do here.AL come.VN.A/PT
 'don't even think about coming here'

4.5.1.5. Complements of aspectual verbs and verbs of perception

Verbs of perception take nonfinite complements with the imperfective participle. The aspectual verbs *asi* 'to begin' and *itxi* 'to stop, to quit' (also 'to leave' and 'to allow', cf. Sp. *dejar* (*de*)) take the same type of complement:

- (134) *urtēten ikusi-neutzun* leave.I see-AUX
 'I saw you leaving'

(135) *Górkā kantāten asi-san* Gorka.A sing.I begin-AUX
 'Gorka began to sing'

(136) *errēten itxi-dot* smoke.I quit-AUX
 'I have quit smoking'

The verb *itxi* can also take a nominalized complement:

- (137) *erretîa itxi-dot*
 smoke.VN.A quit-AUX
 'I have quit smoking'

When used with the meaning of 'to allow, to let', *itxi* also takes nonfinite imperfective complements:

- (138) *es nabe itxi kalera urteten*
 not AUX allow street.AL leave.I
 'they haven't allowed me to go out (to the street)'

4.5.1.6. Indirect object clauses

A nominalized clause with the dative singular of the verbal noun can be used with the function of indirect object of the main verb:

- (139) *estotzât gausa txarrik topáten txistíak kontatiári*
 not-AUX thing bad.PT find.I jokes.A tell.VN.D
 'I don't find anything wrong with (= to) telling jokes'
- (140) *estaukotzô ikararik žentia ilttiári*
 not-s/he has fear.PT people.A kill.VN.D
 's/he is not afraid of killing people'

4.5.1.7. Complement of a noun

Both finite clauses with the complementizer suffix /-n/ and nonfinite clauses with the /-ko/ form of the verbal noun can be used as complement of a noun. Whereas some nouns can take both finite and nonfinite complements, some other nouns can take only one type of complement:

- (141) *itxasora urtén biar dáben abixúa euki dábe*
 sea.AL leave must AUX-CP notice.A have AUX
 'they have received notice that they must go to sea'
- (142) *itxasora urtetéko abixúa euki dábe*
 leave.VN.of
 'they have received notice to go to sea'
- (143) *soldautzâra žun biar daben deiža allaga-žako Josebári*
 army.AL go must AUX-CP notice.A arrive-AUX Joseba.D
 'Joseba has received notice that he must join the army'
- (144) *soldautzâra žutéko deiža allaga-žako Josebári*
 go.VN.of
 'Joseba has received notice to join the army'

- (145) *gerria asiko dan surrumurrua dago*
 war.A start.F AUX-CP rumor.A is
 'there is a rumor that the war will start'
- (146) *seu etorriko sarien susmua euki-dot*
 you come.F AUX-CP feeling.A have-AUX
 'I had the feeling that you would come'
- (147) *aguasillári deitíkuo dorzon ikaria euki-dou*
 city-police.D call.F AUX-CP fear.A have-AUX
 'we were afraid that s/he would call the City Police'
- (148) a. *gixona gabonetárako allagáko žakon esperanzía dauko Márik*
 man.A Christmas.for arrive.F AUX-CP hope.A s/he-has Mari.E
 b. *gixona gabonetárako allagáteko esperanzía dauko Márik*
 'Mary hopes that her husband will arrive by Christmas'
- (149) *orreri morroyari arpeižan žotéko gogua emon-nau*
 that.D guy.D face.IN hit.VN.of desire.A give-AUX
 'I felt like hitting that guy in the face' (cf. Sp. 'me han dado ganas de
 darle en la cara a ese tipo')
- (150) *asko erán daben señalía da ori*
 a lot drink AUX-CP sign.A is that.A
 'that is a sign that s/he has drunk a lot'

4.5.2. Relative clauses

Relative clauses precede the head noun. They can be finite or nonfinite. In finite clauses, the auxiliary takes a complementizer suffix /-n/:

- (151) *orixe dâ txakurra ekarrí daben mutilla*
 that is dog.A bring AUX-CP boy.A
 'that is the boy who brought the dog'
- (152) *seu ikústen etorri san gixona alkatia dâ*
 you.A see.I come AUX-(CP) man.A mayor.A is
 'the man who came to see you is the mayor'

The relativization of subjects and direct objects with a finite construction is unproblematic:

- (153) *orixe dâ Ameriketára žún san mutilla*
 that is America.AL go AUX-(CP) boy.A
 'that is the boy who went to America'
- (154) *orixe dâ txakurra ekarrí eban mutilla*
 that is dog.A bring AUX-(CP) boy.A
 'that is the boy who brought the dog'

- (155) *orixe dâ mutillak ekarrí eban txakurra*
 that is boy.E bring AUX-(CP) dog.A
 'that is the dog that the boy brought'
- (156) *orixe dâ atzo ikusí senduan mutilla*
 that is yesterday see AUX-(CP) boy.A
 'that is the boy whom you saw yesterday'

The relativization of indirect objects produces somewhat less felicitous results:

- (157) *?orixe dâ dirua emón eutzasun mutilla*
 that.A is money.A give AUX-(CP) boy.A
 'that is the boy to whom you gave the money'

As has been noted (cf. de Rijk 1972a, 1972b, Oyharçabal 1983, 1987), relativization of other arguments is more difficult. Without a context, whereas a sentence such as (158) is perfectly acceptable, a sentence such as (159) is of dubious acceptability and (160)-(161) are even less acceptable:

- (158) *auxe dâ bixí nasen etxia*
 this is live AUX-CP house.A
 'this is the house where I live'
- (159) *? orixe dâ etorri garien automobilia*
 that is come AUX-CP car.A
 'that is the car in which we came'
- (160) **? orixe dâ María bixí dan mutilla*
 that is Maria.A live AUX-CP boy.A
 'that is the boy that Maria lives with'
- (161) **? orixe dâ žán dogun máizta²⁰*
 that is eat AUX-CP table.A
 'that is the table that we ate at'

The acceptability of such sentences is strongly conditioned by pragmatic factors. As has also been noted (de Rijk 1972a, 1972b), acceptability improves dramatically when the relativized NP takes the same case in both the main and the relative clause:

- (162) *María bixí dan mutillágas etorri-da*
 Maria.A live AUX-CP boy.C come-AUX
 'Mary came with the boy that she lives with'

Nonrestrictive relative clauses are appositions:

- (163) *Péru, atzo neu ikústen etorri sana, neure*
 Peru.A yesterday I.A see.I come AUX-CP-DET.A my

(20) This sentence is perfectly acceptable with the pragmatically odd reading 'that is the table that we ate'.

lagun andiza dâ

friend big.A is

'Peru, the one who came to see me yesterday, is a good friend of mine'

Subjects of unaccusative verbs and direct objects can be relativized by means of a nonfinite construction with the preaccenting suffixes *-tako* or *-niko* (cf. section 2.8.4):

- (164) *orixe dâ Ameriketára žúniko/žündako mutilla*
that.A is America.AL go.RELP boy.A
'that is the boy who went to America'
- (165) *atzo allagâniko/allagâtako gixona ikusi-dot*
yesterday arrive.RELP man.A see-AUX
'I have seen the man who came yesterday'
- (166) *atzo žaižóniko/žaižótako umia lodiža dâ*
yesterday be-born.RELP child.A fat.A is
'the child who was born yesterday is fat'
- (167) *orixe dâ atzo suk ikusíniko/ikusítako mutilla*
that.A is yesterday you.E see.RELP boy.A
'that is the boy that you saw yesterday'
- (168) *orixe dâ mutillak ekarríniko/ekarrítako txakurra*
that.A is boy.E bring.RELP dog.A
'that is the dog that the boy brought'
- (169) *atzo nik apurtúniko/apurtútako basúa loižetára bota-dot*
yesterday I.E break.RELP glass.A garbage.AL throw-AUX
'I have thrown away the glass that I broke yesterday'

On the other hand, the relativization of real transitive subjects and other arguments using this strategy is a lot more difficult. The following examples are unacceptable without a context (they may, nevertheless, become acceptable under certain contextual conditions):

- (170) ??*orixe dâ txakurra ekarríniko/ekarrítako mutilla*
that.A is dog.A bring.RELP boy.A
'that is the boy who brought the dog'
- (171) ??*orixe dâ dirua ostúniko/ostútako mutilla*
that.A is money.A steal.RELP boy.A
'that is the boy who stole the money'
- (172) ??*orixe dâ dirua emóniko/emóndako mutilla*
that.A is money.A give.RELP boy.A
'that is the boy who was given the money'

The same situation obtains with subjects of pseudo-transitive or unergative verbs (intransitive verbs which take transitive inflection, cf. section 4.4.3). The relativiza-

tion of these subjects by means of a nonfinite construction also produces results of very dubious acceptability:

- (173) *?orixe dâ berandura árte lo éiñiko/éinddako gixona
that.A is late.AL until sleep do.RELP man.A
'that is the man who slept until late'

- (174) *?orixe dâ etxétik urténiko/urténdako gixona
that.A is house.AB leave.RELP man.A
'that is the man who came out of the house'

4.5.3. Cleft sentences

In cleft sentences the emphasized constituent preceding the copula is inflected as would correspond to an argument of the subordinate verb. The subordinate verb carries the suffix /-la/ or /-na/. In the following examples, the (b) sentences are clefts:

- (175) a. orretxegas mutillágas etorri-nas
that.C boy.C come-AUX
'I have come with that boy'
b. orretxegas mutillágas da etorri nasena
that.C boy.C is come AUX-CP
'it is with that boy that I have come' (lit. 'with that boy (it) is that I have come')
- (176) a. erregalúa orrentzâko mutillenzâko ekarri-dábe
present.A those.B boys.B bring-AUX
'they have brought the present for those boys'
b. orrentzâko mutillenzâko da erregalúa ekarrí dabéna
those.B boys.B is present.A bring AUX-CP
'it is for those boys that they have brought the present'
(lit. 'for those boys (it) is that they have brought the presents')
- (177) a. premižúa orrei mutillari emon-dótze
prize.A that.D boy.D give-AUX
'they have given the prize to that boy'
b. orrei mutillari dâ premižúa emón dotzéna
that.D boy.D is prize.A give AUX-CP
'it is to that boy that they have given the prize'
(lit. 'to that boy (it) is that they have given the prize')

4.5.4. Adverb clauses

4.5.4.1. Time clauses

There are finite time clauses indicating simultaneity ('when'-clauses) where the auxiliary carries the suffix /-n/ followed by the inessive case marker:

- (178) a. *etörten sarinian, ekárri liburúa*
 come.I AUX-when bring book.A
 ‘when you come, bring the book’
- b. *etörten sarinian ekárri liburúa*
 ‘when you COME, bring the book’
- (179) *Lekitton newanian, Kôldo ikusi-neban*
 Lekeitio.IN I-was-when Koldo.A see AUX
 ‘when I was in Lekeitio, I saw Koldo’
- (180) *guardasolâ galdu nebala konturatu-nitzan etxian sartún nitzanian*
 umbrella.A lose AUX-CP realize-AUX house.IN enter AUX-when
 ‘I realized that I had lost THE UMBRELLA when I entered the house’

The subordinate verb with the complementizer suffix /-n/ may be followed by the posposition *artian* ‘while’:

- (181) *afariža preparáten newan artian, Péruk komunâ garbittu-eban*
 dinner.A prepare.I I-was-(CP) while Peru.E bathroom.A clean-AUX
 ‘while I was cooking dinner, Peru cleaned the bathroom’
- (182) *goixétan Kóldo rradižúa entzúten eotén-da, armosua žáten*
 mornings.IN Koldo.A radio.A listen.I be.I-AUX breakfast.A eat.I
 daben artian
 AUX-CP while
 ‘in the morning, Koldo listens to the radio while he eats his breakfast’

Another possibility is for the conjugated verb to carry the suffix /-la/, but this construction is only possible with past events (simultaneous with a past event in the main clause):

- (183) a. *lo ewasala, lapúrrak sartun-sirian*
 sleep they-were-CP thieves.A enter-AUX
 ‘as they were sleeping, THE THIEVES got inside’
- b. *lo ewasalâ sartun-sirian lapúrrak*
 ‘AS THEY WERE SLEEPING, the thieves got inside’
- c. *lo ewasala, sartún ein sirian lapúrrak*
 ‘as they were sleeping, the thieves GOT INSIDE’

In this construction, the verb in the main clause may be a present form and may, nevertheless, be interpreted as indicating a past event:

- (184) *lo dagosela, lapúrrak sartun-sirian*
 sleep they-are-CP thieves.A enter-AUX
 ‘as they were (lit. are) sleeping, the thieves got inside’

Time clauses expressing a simultaneous event can also be nonfinite with the suffix /-keran*/ ‘upon’:

- (185) a. *etxian sartukérán, guardasolâ galdu nebala konturatu-nitzan*
 house.IN enter.upon umbrella.A lose AUX-CP realize-AUX
 'upon entering the house, I realized that I had lost THE UMBRELLA'
 b. *guardasola galdu eiñebala konturatu nitzan etxian sartukérán*
 'upon entering the house, I realized that I had LOST the umbrella'

The postposition *bittartían* 'while' (after a conjugated verb with the suffix /-n/) also expresses simultaneity:

- (186) *lo ewasan bittartían, lapúrrak sartun-sirian*
 sleep they-were-(CP) while thieves.A enter-AUX
 'while they slept, the thieves got in'

A repeated event is expressed with *gustižan* or *gustižian* 'every time' or with *bakotxian* 'each time' after a conjugated verb with the suffix /-n/:

- (187) a. *Lekittora nóyan gustižan, neure aittítta ikustén-dot*
 Lekeitio.AL I-go-CP every.IN my grandfather.A see-AUX
 'every time I go to Lekeitio, I see my grandfather'
 b. *Lekittora nóyan gustižán ikustén-dot neure aittítta*
 'EVERY TIME I go to Lekeitio, I see my grandfather'

- (188) *orrek neskiak ikústen naben bakotxian barré eittén-dau*
 that.E girl.E see.I AUX-CP each.IN laugh do.I-AUX
 'that girl laughs every time she sees me'

An event previous to that of the main clause is expressed by nonfinite clauses with *báiñō ariñágó* 'sooner than, before', *aurrétilk* 'before' or *orduko* 'before, by the time' following the perfective participle:

- (189) a. *urten báiñō ariñágó, sarrátu bentának*
 leave than sooner close windows.A
 'before leaving, CLOSE the windows'
 b. *sarrátu bentának urten báiñō ariñágó*
 'CLOSE the windows before leaving'
 c. *urten báiñō ariñágó sarratu bentának*
 'close the windows BEFORE LEAVING'

- (190) *Ameriketára žun aurrétilk, eskôla baten eo-nitzan biarrian*
 Americas.AL go before school one.IN be-AUX work.IN
 'before going to America, I worked at a school'

- (191) *amentxê eon-da, seuk deittú aurrétilk*
 here be-AUX you.E call before
 's/he was here before you called'

- (192) *esamíña entregá orduko, errepásá ondo eskribidú dosuna*
 exam.A deliver before review well write AUX-REL.A
 'before handing in the exam, go over what you have written'

- (193) *su biarrian asti orduko gabá eingó-ra*
 you.A work.IN begin before night.A make.F-AUX
 'by the time you start working, the night will come'

Finite clauses with the expression *ordurako* 'by the time' following a finite verb with the complementizer /-n/ are also employed. Instead of *ordurako*, the verb may take the suffix -(e)rako after the complementizer /-n/:

- (194) *su satosen ordurako pelikulía amaittúta eongó-ra*
 you.A you-come-AUX by the time movie.A finished be.F-AUX
 'by the time you come the movie will be finished'
- (195) *es-tâ iñor geldittuko amen, polisîza datorren ordurako*
 not-AUX anybody remain.F here police.A come.AUX by the time
 'nobody will remain here by the time the police come'
- (196) *burua bûltá nebanerako, txoriža eskapâta ewan*
 head.A turn AUX-CP-for bird.A escaped it-was
 'by the time I turned my head, the bird had already escaped'
- (197) *illun ewân gu etxera allagá giñinerako*
 dark it-was we.A house.AL arrive AUX-CP-for
 'it was dark by the time we arrived home'

An event taking place after that of the main clause can be expressed with *-ta gero* 'after' or with the suffix *-takuan* (which, like /-tako/, assigns enclitic accent), both following a perfective participle:

- (198) a. *žan da gero, betî botatén-dot siestia*
 eat and later always throw.I-AUX nap.A
 'after eating, I ALWAYS take a nap'
 b. *žan da gero botatén-dot beti siestia*
 'AFTER EATING I always take a nap'
 c. *siestia, žan da gero botatén-dot beti*
 'the nap, I always take (it) AFTER EATING'

- (199) *esamîña amaittútakuan, tabernarâ žungo-gára*
 exam.A finished.of.IN tavern.AL go.F-AUX
 'after finishing the exam, we will go to the bar'

The expressions *eta segízan* and *eta gitxira* 'and immediately, and right away' (cf. Sp. *y en seguida, y al poco*, respectively) following a perfective participle indicate a more immediately following event:

- (200) *nire txakurra katu bat ikusí tta segízan saunkâka astén-da*
 my dog.A cat one.A see and immediately barking begin.I-AUX
 'my dog starts barking right away when he sees a cat'

- (201) *makiñia erosí tta gitxira fállo bat eukala konturatu-nitzan*
 machine.A buy and little.AL fault one.A it-had-AUX realize-AUX
 'shortly after buying the machine, I noticed that it had a problem'

The expression *eta batera* 'at once' may indicate a simultaneous or immediately following event:

- (202) *neuk kalera urtén da batera argižak amata-sirian*
 I.E street.AL leave and one-AL lights.A extinguish-AUX
 'when I went out to the street, the lights went out'
- (203) *makurtú ta batera prákak apurtu-žakosen*
 bend and one.AL pants.A break-AUX
 'when s/he bent over, his/her pants ripped apart'

An immediately following event can also be expressed by *báñio es eiñ* lit. 'not do (other) than' (cf. Sp. *no hacer sino*):

- (204) *neu dútxan sartun báñio es nitzan eiñ, da ân kentzen-dábe ura*
 I.A shower.IN enter than not AUX do and there take out.I-AUX water.A
 'I just got in the shower, and they cut off the water'

A related construction with the same meaning takes the expression *báñio es* 'not (other) than' following either a perfective participle or a verbal noun:

- (205) *neu dútxan sartu/sartzia báñio es, da ân kentzen-dábe ura*
 I shower.IN enter/VN.A than not and there take out.I-AUX water.A

'Until' is expressed with the postposition *árte* or *artian* following the perfective participle:

- (206) *seu žun ártel/artian esnâs trankill egónago*
 you.A go until not-AUX calm be.F
 'until you leave, I will not be calm'
- (207) *neu etorri ártel/artian su ês mobidu*
 I.A come until you.A not move
 'don't move until I come'
- (208) *euriža geldittu ártel/artian kontzižopian eon-giñian*
 rain.A stop until Town Hall-under.IN be-AUX
 'we stayed in the Town Hall's arcade until the rain stopped'

'Since'-clauses (in their temporal meaning) are expressed by finite clauses with the complementizer suffix */-n/* followed by the ablative suffix:

- (209) *ori andria posik daô semia Ameriketálik allagá žakonétik*
 that.A woman.A happy she-is son.A Americas.AB arrive AUX-CP.AB
 'that woman is happy since her son arrived from America'

- (210) *eskondú sanéтик fin-fin dabill*
 marry AUX-(CP).AB correct s/he-walks
 's/he is behaving very well since s/he got married'

In this construction the subordinate verb may be followed by *ona* 'hitherto':

- (211) *doktorawa amaittú ebanéтик ona es-tâu eser geižágo argittaratu*
 doctorate.A finish AUX-CP.AB hitherto not-AUX anything more publish
 's/he has not published anything more since s/he finished his/her PhD'
- (212) *asidentía eukí nebanéтик ona mariuâkiñ ibilli-nas*
 accident.A have AUX-CP-AB hitherto dizziness.C walk-AUX
 'since I had the accident, I have been feeling dizzy'

4.5.4.2. Manner clauses

Finite manner clauses are formed with the postpositions *modura*, *moduan* 'manner, all/in' or *antzera* 'like' (lit. 'resemblance, all.') following a verb with the suffix /-n/:

- (213) *seuk nai dosun modurâ/moduân éingot*
 you.E want AUX-CP manner.AL/IN do.F-AUX
 'I will do it as you want'
- (214) *dana žakîngo baéban modura/moduan esa-eban*
 everything.A know.F if-AUX-(CP) manner.AL/IN say-AUX
 's/he said it as if s/he knew everything'
- (215) *monâak ibiltten disen antzera ibilttén-da gure jefia*
 monkeys.A walk.I AUX-CP like walk.I-AUX our boss.A
 'our boss walks like monkeys walk'

Uninflected clauses with the imperfective participle or the predicative adjectival participle can be used as complements of manner:

- (216) *astua bustana mobirûten etorri-san gewana*
 donkey.A tail.A move.I come-AUX gu.AL
 'the donkey came towards us waving its tail'
- (217) *txiližâak éitten botaten-dítxus orrek abadiak sermóyak*
 yells.A do.I throw.I-AUX that.E priest.A sermons.A
 'that priest gives his sermons yelling'
- (218) *orrek pelotarižak burua makurtûta žokatzén-dau*
 that.E ball-player.E head.A lowered play.I-AUX
 'that ball-player plays with his head down'
- (219) *sêlan atará doten olako nôta ona? asko ikasîttal/ikâsten*
 how get AUX-CP such grade good.A a lot learned/learn.I
 'how did I get such a good grade? (by) studying hard'

- (220) *ondarrian asko ibiltten/ibillitta áinkak gogortû eitten-díras*
 beach.I a lot walk.I/walked legs.A strengthen do.I-AUX
 'by walking on the beach your legs get stronger'

4.5.4.3. Purpose (final) clauses

Purpose or final clauses can be finite or nonfinite. In finite final clauses, the conjugated verb takes the suffix /-n/. Subjunctive forms are optionally used in those tenses for which they exist:

- (221) *seu žun sarien/saixen eiñ-ddau ori*
 you.A go AUX-CP do-AUX that.A
 's/he has done that so you will leave'
- (222) *ori diruori, Koldóri liburúa erosi dotzasun emon-dotzut*
 that.A money-that.A Koldo.D book.A buy AUX-CPgive-AUX
 'I have given you that money for you to buy Koldo the book'

Nonfinite final clauses are formed with the /-ko/ form of the verbal noun:

- (223) *seuk žakittéko diñótzut*
 you.E know.VN.of I-tell-you
 'I am telling you, so that you know'
- (224) *leidutéko emon neutzun ori liburúa*
 read.VN.of give AUX that.A book.A
 'I gave you that book for you to read'
- (225) *ónek larrósak altaran ipinttéko diras²¹*
 those.A roses.A altar.IN put.VN.of they-are
 'those roses are to put on the altar'

Nonfinite clauses formed with the verbal noun with the suffix /-ko-tan/ are used as complements of *egon* 'to be, to stay' (and some other verbs) in expressions with the meaning 'to have the intention, to be meaning':

- (226) *beti sagôs Ainhoári deitzekótan*
 always you-are Ainhoa.D call.VN.of.IN
 'you are always meaning to call Ainhoa'
- (227) *ondarrera žutekótan eon gara, baiña tapâ eiñ-ddau eweldižak*
 beach.AL go.VN.of.IN be AUX but cover do-AUX weather.E
 'we had the intention of going to the beach, but the weather has gotten cloudy'

The verb *žuan* 'to go' takes final complements with the imperfective participle:

(21) In this example the whole purpose clause [*altaran ipinttéko*] is the focus. This sentence can be translated as 'these roses are TO PUT on the altar' or as 'these roses are to put ON THE ALTAR'. It is not possible to focalize part of the purpose clause. That is *ónek larrósak altaran ipinttéko diras is ungrammatical.

- (228) *ospittalerâ dóyas, amúma bisittâten*
 hospital.AL they-go grandmother.A visit.I
 'they are going to the hospital in order to visit their grandmother'

Nonfinite final clauses can also be formed with the postpositions *árren* or *(g)áittik* 'for, in order to' following the absolute form of the verbal noun:

- (229) *bera librâti árren akusa-gaittus guri*²²
 s/he.A free.VN for accuse-AUX we.D
 'in order to free him/herself, s/he has accused us'
- (230) *guraso bátzuk erosér eingo-leukie éuren semalabári žáten emóti árren*
 parent some.E anything.A do.F-AUX their children.D eat.I give.VN for
 'some parents would do anything to feed their children'
- (231) *beren lagunak lelengóko premižúa irabásti áittik tranpia eiban juejak*
 his friend.E first prize.A win.VN for trick.A do-AUX judge.E
 'in order for his friend to win the first prize, the judge cheated'

4.5.4.4. Cause clauses

In the main type of cause adverbial clause, the conjugated verb bears the suffix */-lako/* 'because':

- (232) *Míren ingelesa ikâsten dago, datorren urtian Ameriketâra*
 Miren.A English.A learn.I she-is it-comes.REL year.IN America. AL
nai nabelako žun
 want AUX-CP go
 'Miren is learning English, because she wants to go to America next year'
- (233) *gogua emôn nabelako eiñ-ddot olan*
 feeling.A give AUX-CP do-AUX thus
 'I have done it that way, because I have felt like it'²³

A related suffix is */-lakoan/* (with the inessive marker), which gives rise to clauses with the meaning 'on account of, thinking that':

- (234) *tontúa dalakuan, engañâ nai-ixan-dábe (eiñ)*
 stupid.A he-is-CP cheat weant-be-AUX do
 'thinking that s/he is stupid, they have tried to cheat him/her'
- (235) *kanpiñian žun diras Iparraldéra, eweldi ederra éingo dabelakuan*
 camping.IN go AUX Iparralde.AL weather good.Ado.F AUX-CP
 'they have gone camping to Iparralde, thinking that the weather is
 going to be fine'

(22) *libratí(a)* *árren* -> *libratí árren* 'in order to free'

(23) Cf. Sp. 'porque me ha dado la gana'

Another type of construction indicating cause is a coordinate structure where the conjunction *éta* 'and' is used as a postposition at the end of the clause indicating a cause or reason. That this is a coordinate structure, rather than involving subordination, is shown by the fact that focus accent is assigned independently to each of the two clauses:

- (236) *berâ presenta-žakun, guk esgenuân esagútzen éta*
 s/he.A introduce-AUX we.E not-AUX know.I and
 's/he introduced him/herself to us, because/since we didn't know him/her'
- (237) *amâta rradižúa, burukomiña daukât eta*
 turn off radio.A headache.A I-have and
 'turn off the radio, I have a headache'

The clause-initial complementizer *se* 'that' can also introduce coordinate causal clauses, the final conjunction *éta* being optional in this case:

- (238) *êsnoya urtéten, se biar pillúa daukat (éta)*
 not-I-go leave.I that work a lot.A I-have and
 'I am not going to go out, because I have a lot of work'
- (239) *etôrri mesedes, se jentîa biar dou (éta)*
 come please that people.A need AUX and
 'Please come, because we need people'
- (240) *estakîtt ser nai daben, se ondiñóko estôt eiñ berbarik*
 not-I-know what want AUX-CP that still not-AUX do word.PT
beráas
 him/her.C
 'I don't know what s/he wants, because I haven't talked to him/her yet'
- (241) *etxerâ nôya, se amen es-taô negosizórik (éta)*
 house.AL I-go that here not-is business.PT and
 'I am going home because there is nothing to do here' (lit. 'there is no business here')

Another possibility in finite causal clauses is for the subordinate verb to take the general complementizer suffix */-la/*, followed by *éta*. In this construction there is an implicit verb of 'saying' or 'thinking':

- (242) *es-tâ etorri afarira, ês taukola gogorik éta*
 not-AUX come supper.AL not he-has-CP desire.PT and
 's/he hasn't come to supper, on account that s/he doesn't feel like it'
- (243) *dirurik ês taukela ta, Andoni ta Maribi es-tirâ*
 money.PT not they-have-CP and Andoni.A and Maribi.A not-AUX
eskondúko ondiñóko
 marry.F yet

'since they don't have any money, Andoni and Maribi are not going to get married yet'

- (244) *es-totzañ̄ eser esan, asarratûko dala ta*
 not-AUX anything say get angry.F AUX-CP and
 'we haven't told him/her anything, (thinking) that s/he might get angry'

Nonfinite clauses with the postposition (*g*)áittik or árren, which were mentioned in the previous section as expressing purpose or finality, may also have a causal meaning, as in the following examples:

- (245) *maixúak berba eititia áittik kastiga-nau*
 teacher.E word do.VN.A for punish-AUX
 'the teacher has punished me for talking'
- (246) *dirurik es emotia áittik sekuestra-dábe*
 money.PT not give.VN.A for kidnap.AUX
 'they have kidnapped him/her for not paying money'
- (247) *kalerâ bialduko-sáittut, txarto portáti árren*
 street.AL send.F-AUX badly behave.VN.A for
 'I will send you out, for behaving badly'
- (248) *seu ikusti árren etorri-naix ona*
 you.A see.VN.A for come-AUX here.AL
 'I have come here in order to see you'

There is another type of finite cause clause involving the suffix /-les*/ 'since', although the meaning of these clauses is not strictly causal:

- (249) *dirurik es-taukéles, estôt pentzáten erosi-al-dabénik*
 money.PT not-they-have-since not-AUX think.I buy-can-AUX-CP
 'since they don't have money, I don't think they can buy it'
- (250) *seuk dakixúles, segáittik es násu esaten?*
 you.E you-know-since why not AUX say.I
 'since you know it, why don't you tell me?'

4.5.4.5. Consequence/result clauses

There is a correlative construction of result where *áiñ* (*asko*) 'so (much)' is introduced in the first clause and the complementizer *se* 'that' is used as link between the two clauses:

- (251) *Górkak áiñ diru asko daukó se ori danâ erosi-léike*²⁴
 Gorka.E so money much he-has that that all.A buy-AUX
 'Gorka has so much money, that he can buy all of that'

(24) Or *Górkak ainbête diru asko dauko...*

- (252) *aiñ urrun dagó se, egun bî tardatén-da allagáten*
 so far it-is that day two take.I-AUX arrive.I
 'it is so far, that it takes two days to get there'
- (253) *aiñ asko žan-genduán se, iža errementâ ein-giñian*
 so much eat-AUX that almost explode do-AUX
 'we ate so much, that we almost exploded'

4.5.4.6. Degree/comparative clauses

a/ Comparisons of inequality

In comparisons expressing inequality, the standard of comparison is followed by *báñio* 'than'. It is important to distinguish the comparison of quantities from the comparison of qualities. To compare unequal quantities, the words *geižágo* 'more' and *gitxiágo* 'less' are used:

- (254) *Górkak Mariak báñio diru geižágo dauko*
 Gorka.E Maria.E than money more he-has
 'Gorka has more money than Maria'
- (255) *nik suk báñio diru gitxiágo daukat*
 I.E you.E than money less I-have
 'I have less money than you'

Sentence (256) illustrates the comparison of unequal qualities. As in all Basque dialects, only possession of a quality to a higher degree than the standard can be expressed (with the comparative suffix */-ago*/* 'more, -er' attached to the compared adjective):²⁵

- (256) *Górka María báñio altuáwa da*
 Gorka.A Maria.A than taller he-is
 'Gorka is taller than Maria'

b/ Comparisons of equality

When equal quantities are compared *béste* 'other' is postponed to the standard of comparison, which takes the genitive case:

- (257) *Górkak sure béste diru dauko*
 Gorka.E your other money he-has
 'Gorka has as much money as you'
- (258) *Ainárák êuren béste andráko dauko*
 Ainara.E their other doll she-has
 'Ainara has as many dolls as them'

In constructions with the meaning 'as much as possible', *béste* 'other' is used after a form of *al ixan* 'to be able':

(25) Sentences such as 'Gorka is less tall than Maria' are not directly expressable in Basque.

- (259) *Koldok al ixâ eban bêste korridu-eban*
 Koldo.E can be AUX-(CP) other run-AUX
 'Koldo ran as much as he could'

- (260) *al-ixâ neban bêste perretxiko artu-nebasan*
 can-be AUX-(CP) other mushroom take-AUX
 'I picked up as many mushrooms as I could'

Instead of *bêste*, a superlative form is used in comparisons involving adverbs. The two constructions illustrated in the examples are employed:

- (261) *Képa al-ixâ eban arînen etorri-san*
 Kepa.A can-be AUX-(CP) fastest come-AUX
 'Kepa came as soon/fast as he could'

- (262) *Aitorrek al-ixâ eban obetuen ei-ban esamîña*
 Aitor.E can-be AUX-(CP) best do-AUX exam.A
 'Aitor did the exam as well as he could'

- (263) *Retégik al-ixâ ebanik eta gogorrren žo-eban pelotía*
 Retegi.E can-be AUX-CP and hardest hit-AUX ball.A
 'Retegi hit the ball as hard as he could'

In the comparison of equal qualities and in comparisons of equality involving nouns *besteko* 'as much as', lit. 'of other', *lakóxe* 'like' and *moduko*, lit. 'like' are used, the standard of comparison being in the genitive case:

- (264) *Górka Edûrnen besteko/moduko altúa da*
 Gorka.A Edurne.G other.of/manner.of tall.A he-is
 'Gorka is as tall as Edurne'

- (265) a. *Górka seure bestekâda*
 Gorka.A your other.of.A he-is
 'Gorka is your equal (is as much as you are)'
 b. *Górka seure lakoxâda / seure modukua dâ*
 'Gorka is like you'

- (266) *Sesíliok geure besteko abillidadia dauko*
 Sesilio.E our other.of skill.A he-has
 'Sesilio has a much skill as we do'

- (267) *Kôldon lakóxe gixon bat da*
 Koldo.G like man one.A he-is
 'He is a man like Koldo'

- (268) *Beníttok neure besteko etxe karua erakutzi-nau*
 Benito.E my other.of house expensive.A show-AUX
 'Benito has shown me a house as expensive as mine'

- (269) *orrek familīzak geure bestēko problēma gogorrak daukos*
 that.E family.E our other.of problem hard.pl.A it-has-them
 'that family has problems as serious as ours'

Correlative structures of the type 'the more/the less... the more/the less' in which quantities are compared are expressed by *semat* *geižago/gitxiágo...* *geižago/gitxiágo*, lit. 'as much more/less... more/less' (cf. Sp. *cuanto más/menos...* *más/menos*). The verb in the main sentence carries the complementizer /-n/:

- (270) *semat geižago entzúten dotzuten, gitxiágo aittutene-dótzut*
 how much more hear.I AUX-CP less understand.I-AUX
 'the more I hear you, the less I understand you'
- (271) *semat geižago estudižáten dosun, geižago žakingó-su*
 how much more study.I AUX-CP more know.F-AUX
 'the more you study, the more you will know'

If qualities are compared in such correlative structures, the comparative suffix /-ago*/ is added to the adjectives or adverbs:

- (272) *semat gogorrágó žóten neban globúa, gorágó allagatén-san*
 how much harder hit.I AUX balloon.A higher arrive.I-AUX
 'the harder I hit the balloon, the higher it got'

It is possible to leave the verb unexpressed (as in English):

- (273) *semat txikiñáo, obetô* (274) *semat argalágó ta biskorrô*
 how much smaller better how much thinner and quicker
 'the smaller, the better' 'the thinner, the quicker'
- (275) *semat andižáo ta tontuôo*
 how much bigger and more stupid
 'the bigger, the more stupid'

In superlative constructions, the noun takes the partitive ending:

- (276) *ori Lekittoko/Lekittóтик etxêrik andižéna da*
 that.A Lekeitio.of/AB house.PT biggest it-is
 'that is the biggest house in Lekeitio'

4.5.4.7. Concessive clauses

There are several types of concessive structures. Nonfinite concessive clauses can be formed with the postposition *árren* 'although, even though, in spite of' following the perfective participle or the postposition *gáittik* 'for' (lit. 'theme, abl.'), in which case the perfective participle carries singular absolute inflection. As was mentioned in sections 4.5.4.3 and 4.5.4.4, these same postpositions convey a causal or final meaning when used with the verbal noun:

- (277) *erantzúna žakiñ árren, es-ebán eser esan*
 answer.A know despite not-AUX anything say
 'even though s/he knew the answer (in spite of knowing the answer),
 s/he didn't say anything'
- (278) *partidua galdu árren, ondiñóko posik daôs amerikanúak*
 match.A lose despite still happy they-are Americans.A
 'despite losing the match, the Americans are still happy'
- (279) *txikiña ixana gáittik, inddar asko raukô*
 small been.A for strength much s/he-has
 'for being so small, s/he is very strong'
- (280) *es-tôt aittu askorik, atênto entzúten egona gáittik*
 not-AUX understand much.PT attentive listen been.A for
 'I haven't understood much, despite being listening attentively'

Another possibility for nonfinite clauses with a concessive meaning is the use of the expression *naix eta* 'although, even though' (lit. 'wanting and') preceding the perfective participle:

- (281) *naix eta erantzúna žakiñ, es-ebán eser esan*
 though and answer.A know not-AUX anything say
 'even though s/he knew the answer, s/he didn't say anything'

In finite concessive clauses the verb takes the conditional prefix /ba*/ 'if' and is followed by *be* 'also':

- (282) *aringaríngua ba-dóya be, es-tâ allagáko*
 fast-fast if-s/he-goes too not-AUX arrive.F
 'even if s/he runs, s/he won't arrive'

4.5.4.8. Clauses of proviso

Adverb clauses of proviso are formed with the postposition *eskéro* (etymologically from *gero* 'later' following a participle with the instrumental suffix /-s/). From the point of view of their meaning, these sentences come very close to conditional structures:

- (283) *Lekittora allaga eskéro, naikû eiñ-ddou*
 Lekeitio.AL arrive provided enough do-AUX
 'provided that we arrive to Lekeitio, we've done enough'
- (284) *batzárra ariñ amaittu eskéro, txikito bátzuk ártzen žungo-gára*
 meeting.A fast finish provided glass some.A take.I go.F-AUX
 'provided that the meeting ends soon, we will go for a drink'

Nominalized clauses in the comitative case can also be used with a similar meaning:

- (285) *Lekittora allagatiágas, naikû eiñddou²⁶*
 Lekeitio.AL arrive.VN.C enough do-AUX
 'as long as we arrive to Lekeitio, we've done enough'

4.5.4.9. Conditional clauses

The conditional construction was studied in sections 3.2.3.7 and 3.2.3.8. The following are examples of conditional sentences:

- (286) *astirik ba-daukósu, gwâsen auntxen*
 time.PT if-you-have let us go right now
 'if you have time, let us go right now'
- (287) *dirurik ba-néuko, emôngo neutzun*
 money.PT if-I-had give.F AUX
 'if I had money, I would give it to you'
- (288) *dirurik euki-ixan-ba-néban, emôngo neutzun*
 money.PT have-be-if-AUX give.F AUX
 'if I had had money, I would have given it to you'

Nominalized constructions with the suffix /-ko-tan*/ can be used with a conditional meaning:

- (289) *aburridúta eotekótan, naižđo dot etxian geldittu*
 bored be-CP prefer AUX house.IN stay
 'if I am going to be bored, I'd rather stay at home'
- (290) *esamiñéra es presentatekótan, ês asi estudižáten on*
 exam.AL not present-CP not start study.I now
 'if you are not going to show up for the exam, don't start studying now'

Nonfinite clauses with *esian* (or *esik*) after a perfective participle are employed with the meaning of 'unless':

- (291) *nire andriak lagundú esian, esîñ ixángot- biarra amaittu*
 my woman.E help unless not be able be.F-AUX work.A finish
 'unless my wife helps me, I won't be able to finish the job'
- (292) *euriža ixán esian, plasân ixangó-ra konsiertua*
 rain.A be unless square.IN be.F-AUX concert.A
 'unless it rains, the concert will be in the Main Square'
- (293) *Alásne ixán esik, es-tôt pentzáten iñor etorríko danik*
 Alazne be unless not-AUX think.I anybody come.F AUX-CP
 'except for Alazne, I don't think anybody will come'

(26) Cf. Sp. 'con llegar a Lekeitio'

4.5.4.10. Other types of adverbial adjunct clauses

Nonfinite adverbial clauses with the meaning of 'instead of' are constructed with *biarrían*, *biarkúan* (based on *biar* 'need, obligation') or *barik* 'without' (which assigns enclitic accent) after a perfective participle:

- (294) *estudiža biarrían/biarkúan, sinêra žungó-nas*
study instead theater.AL go.F-AUX
'instead of studying, I am going to the movies'
- (295) *êixu ein biar dosuna, tontokerížak esáten ibillí barik*
do.IMP do must AUX-REL.A stupid things.A say.I walk without
'do what you have to do, instead of being there saying stupid things'
- (296) *iñoáittik txarto berba éitten ibillí barik, seáittik es-sára ixilik*
anybody.for badly word do.I walk without why not-AUX silent
geldítzen?
stay.I
'instead of saying bad thing about other people, why don't you keep quiet?'

Nominalized clauses with the comitative suffix are used with basically the same meaning and function as infinitival clauses with *con* in Spanish:

- (297) *didar eittiágas es-tosù eser lortúko*
shout do.VN.C not-AUX anything obtain.F
'you won't get anything by shouting' (cf. Sp. 'con gritar no vas a lograr nada')
- (298) *naiku dâ klaséra žutiágas kurtzua aprobatéko*
enough is class.AL go.VN.C course.A pass.VN.of
'it is enough to go to class to pass the course'
(cf. Sp. 'es suficiente con ir a clase para aprobar el curso')

Clauses with the perfective participle bearing the singular comitative ending /-a-gas*/ can have a causal interpretation:

- (299) *gitxi atrapawáas, ês-tabe diru askorik atara aurtengo marian*
little catch.C not-AUX money much.PT take this year.of season.IN
'having caught little, they have not made much money this season'

Nonfinite clauses in which the perfective participle takes the suffix /-keran*/ may also convey a vague causal meaning (besides a purely temporal meaning, cf. section 4.5.4.1):

- (300) *biarra galdukérán, beren errirâ žun da büéltan*
work.A lose-CP his/her country.AL go AUX turn.IN
'having lost his job, s/he has returned to his/her country'
- (301) *kurtziáa asikérán osterá-be, pixo gustížak daos okupáta*
course.A start-CP again-too apartment all.A they-are occupied
'with the academic term starting again, all the apartments are taken'

A similar meaning is conveyed by nonfinite clauses with the predicative adjectival form of the participle (which structurally correspond to the absolute participial construction found in Spanish):

- (302) *olako loiža ikusitta, es-gatōs geižo ona otelera*
 such dirt.A seen not-we-come more here.AL hotel.AL
 'having seen that dirt, we are not coming again to this hotel'
- (303) *aitittā ilgo žakēla žakindda, abadiarī deittu-éutzen*
 grandfather.A die.F AUX-CP known priest.D call-AUX
 'knowing that their grandfather was going to die, they called the priest'

4.5.5. Exclamative sentences

Cleft constructions with *auxe* 'this' are often used as exclamative sentences:

- (304) *auxē da lodiža/lodi dagoná be!*
 that.A is fat.A s/he-is-REL-A too
 'how fat s/he is!'
- (305) *auxē da lodizak dagošenak be!*
 this is fat.p.A they-are-REL-A too
 'how fat they are' (lit. 'this is those that are fat too!')
- (306) *auxē da berua dagoná be!*
 that.A is hot.A he-is-REL-A too
 'how hot!'
- (307) *auxē da bero daukatená be!*
 that.A is hot I-am-REL-A too
 'how hot I am!'

Another common type of exclamative constructions employs the expressions *grasīza* or *eskerrak* 'thanks'; the verb carries the suffix /-na/ or /la/:

- (308) *grasīza/eskerrak ekarrí ebana/ebala!*
 thanks bring AUX-CP
 'it's a good thing that s/he brought it'²⁷
- (309) *grasīza dirua neukana orduntxe momentúan!*
 thanks money.A I-had-CP then moment.IN
 'it's a good thing that I had money at that moment'

Other examples of exclamative sentences are the following:

- (310) *obetō/obā allagáten bá-da partidurako!*
 better arrive.I if-AUX game.for
 's/he's better arrive on time for the game'

(27) 'Gracias que lo trajo'

- (311) *ia allagáten bá-da partidurako!*

CP arrive.I if-AUX game.for

'let's hope s/he will arrive (on time) for the game'

- (312) a. *segurú Górkak dakižena* b. *Górkak segurú dakižena*

sure Gorka.E he-knows-CP

'for sure Gorka must know it'

4.6. Coordination

4.6.1. And-, or-, and but-coordination

Copulative coordinate clauses (*and*-coordination). Two clauses can be coordinated with the conjunction *eta* 'and':

- (313) *Péruk beižā erosi eban eta bere andriak saldū ei(ñ) (e)ban*
Peru.E cow.A buy AUX and his woman.E sell do AUX
'Peru bought the cow and his wife sold it'

- (314) *Péruk es ebán ekarri liburúa, eta Mirének be es ebán estudiža lesiñoya*
Peru.E not AUX bring book.A and Miren.E too not AUX study lesson.A
'neither did Peru bring the book, nor did Miren study the lesson'

Adversative coordinate clauses (*but*-coordination) are headed by the conjunction *baiña* 'but':

- (315) *Péruk beižā erosi ei(ñ) (e)ban, baiña bere andriak saldū ei(ñ) (e)ban*
Peru.E cow.A buy do AUX but his woman.E sell do AUX
'Peru bought the cow, but his wife sold it'

The conjunction *báiña* can also be placed at the end of the second clause (in which case it is accented):

- (316) *gure maixúak liburu bi daukos eskribidúta; es-diras*
ourteacher.E book be.A he-has-them written not-they-are
luse-lusíak báiña
long-long.p.A but
'our teacher has got two books written; they are not very long, though'

- (317) *askanian orren neskien etxerá nóya, es-daukat gogo askorik báiña*
last.IN that.G girl.G house.AL I-go not-I-have desire much.PT but
'at the end, I am going to that girl's house, although I don't feel like it very much'

When the first clause is negative and the second expresses a contrast, the conjunction *báiño* is used at the end of the second clause:

- (318) *basúa apurtú ebana e-sân ixan Aitor, Asier báiño*
 glass.A break AUX-REL.A not-AUX be Aitor.A Asier.A but
 'the one who broke the glass is not Aitor, but Asier'

Disjunctive coordinate clauses (*or*-coordination). The conjunctions *edo* and *ala* are used in disjunctive coordination:

- (319) *Lekittôn nai-dosu bixi edo/ala Ameriketâra nai dosu žuan?*
 Lekeitio.IN want-AUX live or Americas.AL want AUX go
 'do you want to live in Lekeitio or do you want to go to America?'
- (320) *amén geldittuko-sára, edo/ala mendirâ etorriko-sára gúas?*
 here stay.F-AUX or mountain.AL come.F-AUX we.C
 'will you stay here or will you come to the mountains with us?'

Ala expresses a true disjunction, whereas *edo* can also be used when two coordinated terms don't exclude each other:

- (321) *alkatiен ofisiñia udaltxia edo/*ala kontzižúa deitzén-da*
 mayor.G office.A town hall or town hall call.I-AUX
 'the mayor's office is called municipal office or town hall'
- (322) *alkatiен semiak amâbost edo/*ala amâsei urte daukos*
 mayor.G son.E fifteen or sixteen year he-has-them
 'the mayor's son is fifteen or sixteen years old'

Both clauses in a disjunction may be headed by *edo*:

- (323) *edo alkatia es euán bere ofisiñan, edo bere sekretarižíak es ebân*
 or mayor.A not he-was his office.IN or his secretary.E not AUX
nai telefonórik artun
 want telephone.PT take
 'either the mayor wasn't in his office, or his secretary didn't want to pick up the phone'

A disjunction between phrases or other elements can be expressed by *seiñ* or *nai*:

- (324) *aittak (eiñ) seiñ/nai amak eiñ, bardin žakô*
 father.E do or mother.E do same it-is-to him/her
 'whether father (does it) or mother does it, it is the same'
- (325) *ârtun naixuna, gorriža seiñ/nai asula*
 take want-AUX-REL.A red.A or blue.A
 'pick whichever you want, the red one or the blue one'

4.6.2. Correlative coordination

There is a correlative affirmative coordinate construction in which the second clause is headed by *eta báitta* (*bai+éta*) 'and yes and' and contains the word *be* 'also'.

In the corresponding negative construction the second clause is headed by *ésta* (*es+éta*) 'not and' and also carries the word *be* or *bes* (*be+es*) 'also not':

- (326) *Aláznen anažiak etxe andi bat taukô, eta báitta*
Alazne.G brother.E house big one.A he-has and yes/yes-and
basérri bat be Ispasterren
farmhouse one.A too Ispaster.IN
'Alazne's brother has a big house in Lekeitio as well as a farmhouse in
Ispaster'
- (327) *Mikélek es-ebân nai su etortérik, ésta Mirének pe(s)*
Mikel.E not-AUX want you.A come.VN.PT not-and Miren.B too-(not)
'Mikel didn't want you to come and neither did Miren'
- (328) *es, estoú eiñ berbarik Xabierreas; ésta Bixentéas bes*
no not-AUX do word.PT Xabier.C not-and Bixente.C too-not
'no, we haven't talked to Xabier; with Bixente either'
- (329) *iñor be es-ta etorri batzarréa; ésta lendakariža bes*
anybody too not-AUX come meeting.AL not-too president.A too-not
'nobody has come to the meeting; not even the president'

Correlative structures with *bai...bai* 'yes...yes' or *es... es* 'neither... nor' can also be used to coordinate noun phrases:

- (330) *bai alkatiak esâ eustalako, (da) bai sekretarižiak abixâ eustalako,*
yes mayor.E say AUX-CP and yes secretary.E call AUX-CP
askanian žakî ñeban nun san batzárra
last.IN know AUX where it-was meeting.A
'both because the mayor told me and because the secretary called me,
finally I found out where the meeting was'
- (331) *bai Peruk eta bai Mikélek flautia žoten-dábeLekittoko bandan*
yes Peru.E and yes Mikel.E flute.A play.I-AUX Lekeitio.of band.IN
'both Peru and Mikel play the flute in Lekeitio's band'
- (332) *es nik es suk es-takiû se pasá dan*
not I.E not you.E not-we-know what happen AUX-CP
'neither I nor you know what has happened'

Other types of correlative structures are illustrated in the following examples:

- (333) *parte batézik/batéra gogo asko daukarás fubolian žokatzeko*,²⁸
part one.AB/AL desire much I-have-them soccer.IN play-CP
báiña bestézik/bestéra ikaria daukât miñ eittéko
but other.AB/AL fear I-have pain do-CP

(28) The construction *gogo asko daukaras*, which calques the Sp. *tengo muchas ganas* appears to be a recent innovation in the speech of younger speakers. In more conservative varieties, *gogo* 'desire, feeling' is not pluralizable in this expression, cf. *gogo aundira daukat*, lit. 'I have a great desire'.

'on the one hand, I feel very much like playing soccer; but, on the other, I'm afraid to get hurt'

- (334) *alde batélik, posik nagô Australiára bixitten žutéko, baiña, bestélik,*
 side one.AB happy I-am Australia.AL live.I go-CP but other.AB
triste nago Euskalerríza ixtéko
 sad I-am Basque Country.A leave.CP
 'on the one hand, I am happy to go to Australia to live, but, on the
 other, I am sad to leave the Basque Country'

(335) *baiian etörteko, bestián žuteko, mariâ eingo-násu²⁹*
 one.IN come.CP other.IN go.CP make dizzy do.F-AUX
 'first (you tell me) to come, then to go, you are making me dizzy'

4.6.3. Result coordinate clauses

There is one type of coordinate construction of result where the result clause is introduced by the borrowed conjunction *así que* 'so (that)' (from Sp. *así que*):

- (336) *es-žakû gerázen dirurik ardaurako, asike urâ eran biarkó-u*³⁰
 not-AUX remain.I money.PT wine.for so water.A drink need.F-AUX
 'we don't have any money left for wine, so we will have to drink water'³¹

4.6.4. Explicative clauses

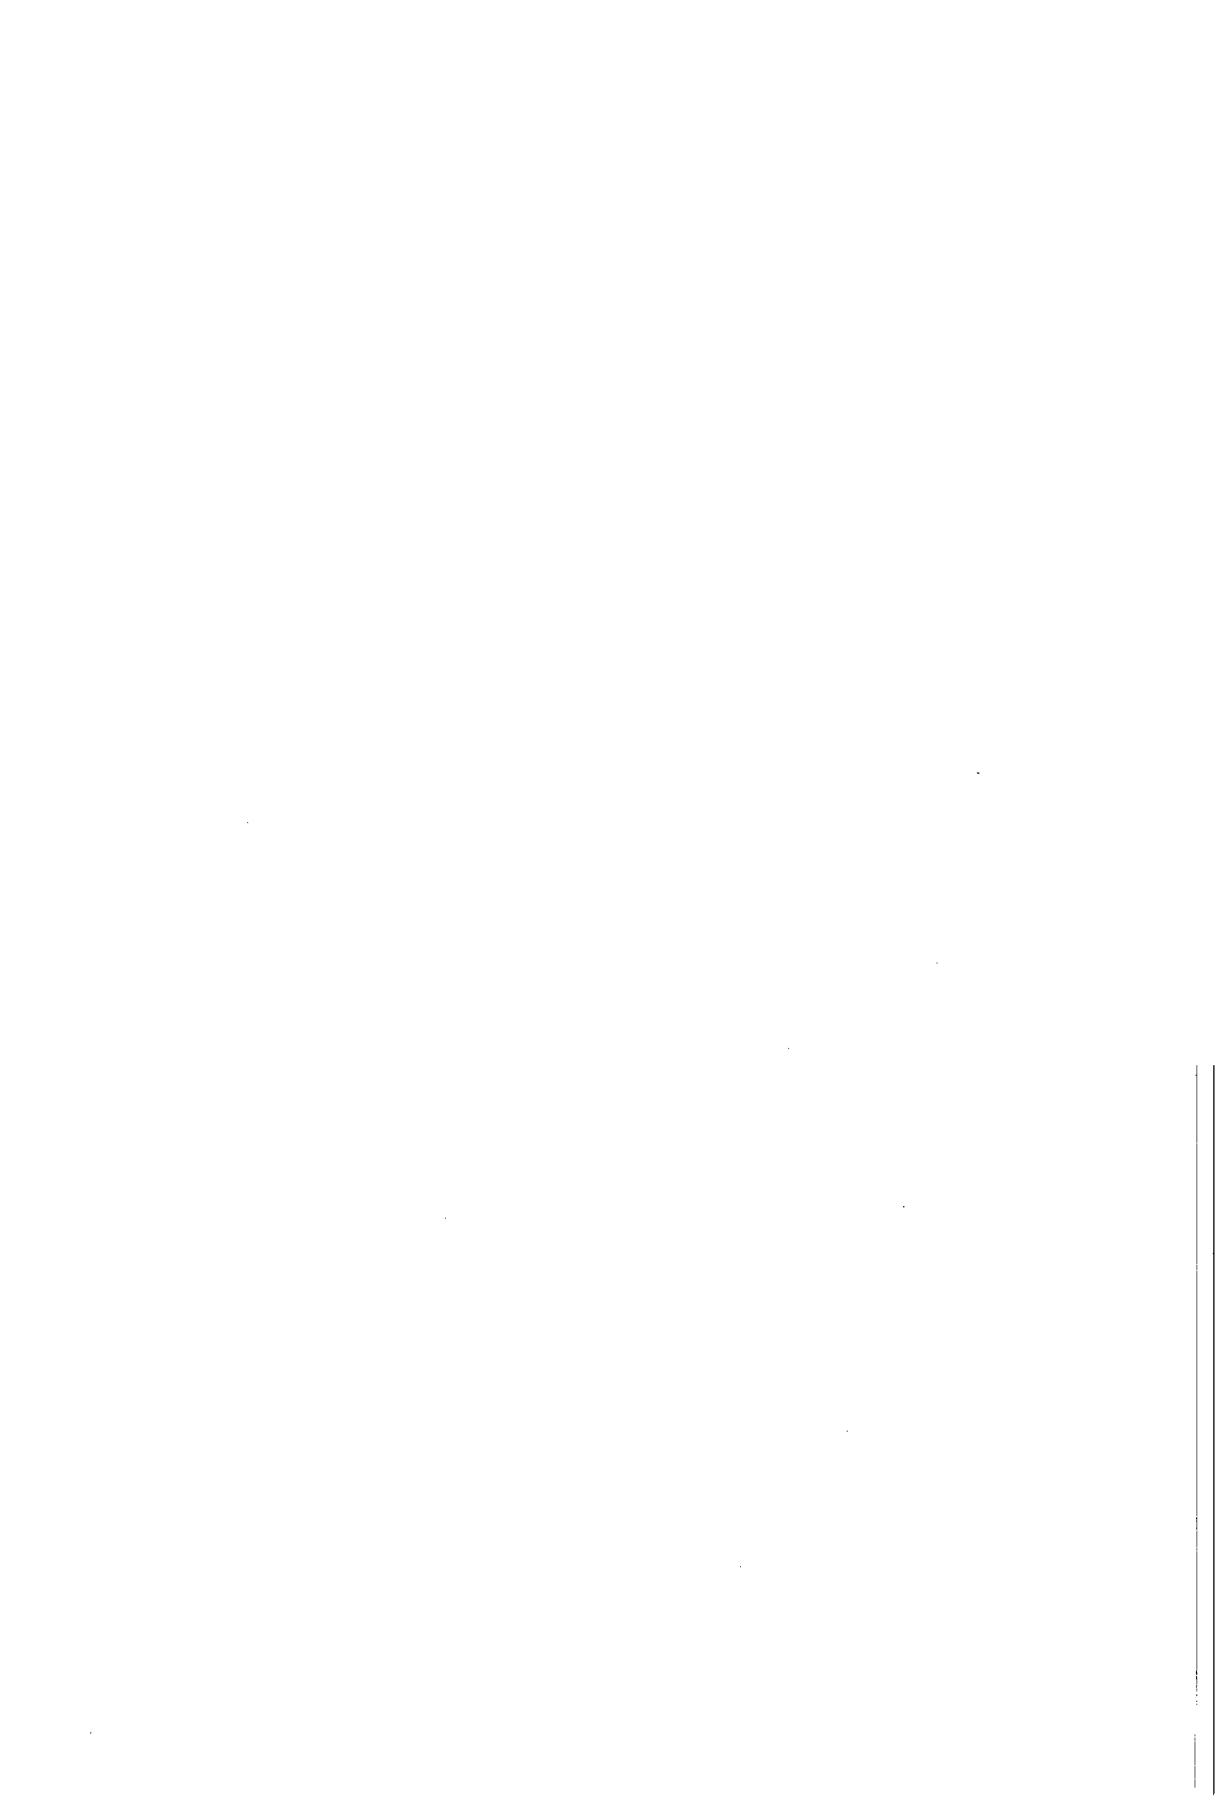

The conjunction *eske* (from Sp. *es que*) is frequently used to introduce explicative clauses. Instead, or in addition to it, the conjunction *eta* can be used at the end of the clause:

These clauses have final raising intonation.

(29) Notice the accentual contrast between the imperative forms *etórteko* 'to come', *zúteko* 'to go' in this sentence and the final forms *zutéko* '(in order) to go', *ixtéko* 'to leave' in the previous example.

(30) biarko-(d)ó(g)u.

(31) Cf. Sp. 'No nos queda dinero para vino, así es que tendremos que beber agua'.

5. TEXTS

In this section we include excerpts from recorded conversations with several speakers in order to provide a sample of spontaneous speech in Lekeitio Basque. We have tried to make this sample representative by including texts from speakers of different ages and both sexes. The same spelling conventions are used as in the rest of the book, but adapting the transcription to the actual pronunciation, and thus reflecting assimilations, deletions and other processes to a slightly greater degree than in other chapters of the book.

Text 1

- M: *mariñerúu pe,¹ itxî dabe ta itxasoratia.²*
sailors too leave AUX and sea-going.VN
'Because the sailors too have stopped going to sea'
- G: *itxî dabela?*
leave AUX.CP

6. VOCABULARY

Nominals (nouns and adjectives) are given both in uninflected form and in the absolute singular. Although the second form given is generally predictable from the first, we include it because it is the citation form of nominals. For verbs, their perfective participle is given, which is both the most basic form of verbs and the citation form.

Adj: Adjective

Adv: Adverb

a.u.: also unaccented

Conj: Conjunction

Dem: Demonstrative

Dim: Diminutive

Interj: Interjection

N: Noun

Neol: Neologism

Num: Numeral

obs: obsolete or obsolescent

Onom: Onomatopoetic word

Pos: Possessive

Postp: Postposition

Pred adj: Predicative adjective

Pref: Prefix

Q: Quantifier

QW: Question word

Suf: Suffix

V: Verb

A.

a (Dem): that over there / aquel.

abixo, abixúa (N): call, warning / aviso.

abusa (V): to abuse / abusar.

aburridu (V): to bore; to get bored / aburrir(se).

aburrido, aburridua (Adj): boring / aburrido.

aburriměnto, aburriměntúa (N): boredom / aburrimiento.

- adar, adarra* (N): 1. branch 2. horn / 1. rama
2. cuerno.
- adur, adurra* (N): saliva / saliva.
- afaldu* (V): to have supper / cenar.
- afalostian* (Adv): after supper / sobremesa de la cena.
- afan, afana* (N): eagerness / afán.
- afan, afana* (Adj): conceited, pretentious / pretencioso.
- afari, afariža* (N): supper / cena.
- afe(k)ta* (V): to affect / afectar.
- afisiño, afisiñoya* (N): fondness / afición.
- afusilla* (V): to shoot with rifles / fusilar.
- agarra* (V): to grab / agarrar.
- agarrada, agarradia* (N): fight / agarrada, pelea.
- agertu* (V): to appear / aparecer.
- agilla, agillía* (N): eagle / águila.
- agiñ, agiña* (N): tooth / diente.
- a(g)in-báko, a(g)in-bakúa* (Adj): toothless / desdentado.
- a(g)inddu* (V): 1. to order, to command 2. to promise / 1. ordenar, mandar 2. prometer.
- a(g)iráka eiñ* (V): to scold / regañar.
- agirižan* (Adv): in plain view / a la vista.
E.g.: *agirižan daróisu gabardiňia* 'your raincoat is in plain view' / 'llevas la gabardina a la vista'.
- agosto, agostua* (N): August / agosto.
- a(g)üanta or a(g)üenta* (V): to support, to bear / aguantar.
- a(g)üasill, a(g)üasilla* (N): city policeman / alguacil.
- agúido or agúro* (Adv): quickly / rápidamente.
- agur, agurra* (N): good bye / adiós.
- a(g)ura, a(g)uria* (N): old man / anciano.
- agurtu* (V): to greet / saludar.
- áiba* (Interj): interjection of surprise / interjección de sorpresa. E.g.: *áiba! sélán eiñ ddau ori ba?* 'Gee! how did (s)he do it?' / '¡ahí va! ¿cómo lo ha hecho?'
- ayenéka ibilli* (V, ai ene 'oh my!' + ka 'adverbializer'): to moan / lamentarse.
- aiñ* (Adv): so / tan.
- ainbésté* (Adv): so much, so many / tanto(s).
- aingeru, aingerua* (N): angel / ángel.
- áinka eiñ* (V): to bite / morder.
- ainka, ainkia* (N): leg / pierna.
- ainkada, ainkadia* (N): biting / mordisco.
- aista, aistia* (N): sister of woman / hermana de mujer.
- aitta* (N): father (used without the determiner) / padre.
- aittabítxi* (N): godfather / padrino.
- aittagura, aittaguria* (N): Our Father / padre-nuestro.
- Aittasántu, Aittasantúa* (N): Pope, Holy Father / Papa, Padre Santo.
- aittasúlo, aittasulúa* (Pred adj): daddy's kid / niño apegado a su padre.
- aittató, aittatárra* (Pred adj): 1. resembling his or her father 2. paternal relative / 1. que sale al padre 2. de la familia paterna.
- aittatu* (V): to mention / mencionar.
- aittiaren* (N): Sign of the Cross / señal de la cruz.
- aittitta* (N): grandfather / abuelo.
- aittaiñarréba* (N): father in law / suegro.
- aitu* (V): to understand / comprender.
- aixa* (Interj): what a / vaya, qué. E.g.: *aixá mutill ona!* 'what a good boy!' / ¡vaya qué niño más bueno!'
- aixe, aixia* (N): wind / viento.
- áxe or axe* (Dem): that over there, intensive / aquel mismo.
- aixkiratu* (V): to make peace, to make up / hacer las paces.
- aixkóra, aixkoría* (N): ax / hacha.
- aja* (V): to get crumpled / ajar(se).
- ajau, ajawa* (Adj): crumpled / ajado.
- ajéntzi, ajentzíza* (N): agency / agencia.
- ajustau, ajustawa* (Adj): tight (clothes) / ajustado (se dice de la ropa).
- akábo* (Interj): that's it! / se acabó.
- akelárre, akelarría* (N): witches' sabbath / aquelarre.
- aker, akerra* (N): billy goat / macho cabrío.
- akonseja* (V): advise / aconsejar.
- akorda* (V): to remember / acordarse.
- akorduan euki* (V): to keep in mind / tener en cuenta.
- akostunbra (eiñ)* (V): to get used to / acostumbrarse.
- akullu, akullua* (N): goad / agujada.
- al* (V): to be able / poder.
- ála* (Conj.): 1. or (exclusive) 2. perhaps, or what / 1. o (exclusivo) 2. o qué. E.g.:

- ê̄s-takixu ála?* 'you don't know or what?'
 / 'no sabes ¿o qué?'
- alaba, alabia* (N): daughter / hija.
- alamierdára* (Adv): to hell / a la mierda.
 E.g.: *alamierdára žutía daukola!* 'let him/her go to hell!' / ¡que se vaya a la mierda!'
- álan* (Adv): thus, in that manner / así .
- alantxérik* (Adv): in that manner (emphatic)
 / así mismito.
- alarú, alarúa* (N): scream (normally in the plural) / alarido, chillido (generalmente en plural).
- alarúka* (Adv): screaming / dando alaridos, chillando.
- alargun, alarguna* (N): widow(er) / viudo-a.
- alargundu* (V): to become a widow(er) / enviudar.
- albaittero, albaitterua* (N, obs.): veterinarian / veterinario, albaitero.
- albo, albuia* (N): side / lado.
